PART 1

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

Raising houseplants involves nearly as much care and knowledge as raising children. First, both **1.** _____ and children are sensitive to their environments. For example, a plant will grow faster and 'be much healthier if it is raised in an **2.** _____ of tender, loving care. The same is true for a child, who will be happier and **3.** _____ if his parents love and nurture him. Similarly, proper care of houseplants requires a basic knowledge of plants on the part of the owner. He must **4.** _____, for example, which of his plants need direct sunlight and which need to be kept in shady places, and how much **5.** _____ each plant requires for the best growth and appearance. Parents, too, must have a basic knowledge of their **6.** _____'s needs in order to provide what is necessary for the best physical and mental development.

PART 2

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements.
Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.
Mark your answers on the answer sheet.

7. Emma is a motivated and detail-oriented individual. She has excellent organizational skills and can handle multiple tasks simultaneously.
8. John is a creative and innovative individual. He is always finding new ways to solve problems and improve processes.
9. Sarah is a persuasive and influential person. She has excellent communication skills and can negotiate deals effectively.
10. Tom is a reliable and responsible individual. He can work independently and deliver quality work within tight deadlines.
11. Susan is a team player. She enjoys working with others and can collaborate effectively to achieve common goals.
12. Jack is a problem solver. He can analyze complex issues and develop practical solutions.

@Multilevel_Halikulov

13. Maria is a customer-focused person. She places customers at the center of everything she does and can provide excellent customer service.
14. David is a quick learner. He can adapt to new environments and learn new skills quickly.

TOPIC: JOB ADVERTISEMENTS

A) We are looking for an SMM Manager who has no background experience at all.
B) We are hiring a Strategy Analyst who can provide actionable insights and recommendations for business growth.
C) We are in need of a Project Coordinator who can manage projects from start to finish and ensure timely delivery.
D) We are looking for a Marketing Coordinator who can work closely with the team to execute marketing campaigns and initiatives.
E) We are in need of an Intern who can support various departments and learn the ropes of the industry.
F) We need in Intern who can support one department and doesn't need a high salary.
G) We are seeking a Business Development Manager who can identify new business opportunities and build valuable partnerships.
H) We are hiring a Product Manager who can drive product innovations and enhance customer satisfaction.
I) We are looking for an Administrative Assistant who can manage office operations efficiently.
J) We are seeking a Customer Service Representative who can assist customers with their inquiries and ensure customer satisfaction.

@Multilevel_Halikulov

PART 3

Read the text and choose the correct heading for each paragraph from the list of headings below.
There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of headings
A) Necessary Components
B) Important Conclusion
C) Useful Advice
D) Significant Difference
E) Health Risks
F) Moderation Is the Key!
G) Diet and Exercise
H) Benefits of Good Nutrition

15. Paragraph 1
17. Paragraph 3
19. Paragraph 5
16. Paragraph 2
18. Paragraph 4
20. Paragraph 6

I. Developing healthy eating habits is simpler and easier than you might think. You will look and feel better if you make a habit of eating healthfully. You will have more energy and your immune system will be stronger. When you eat a diet rich in fruits and vegetables you are lowering your risk of heart disease, cancers and many other serious health ailments. Healthy eating habits are your ticket to a healthier body and mind.

II. A four-week clinical trial that tested the new regimen found that overweight adults who consumed a high-protein, entirely vegan diet were able to lose about the same amount of weight as a comparison group of dieters on a high-carbohydrate, low-fat vegetarian dairy diet. But while those on the high-carbohydrate dairy diet experienced drops of 12 percent in their cholesterol, those on the high-protein vegan diet saw cholesterol reductions of 20 percent.

III. 'The idea preyed on me for a long time. If the Atkins Diet looks good, and it's got so much saturated fat and cholesterol in it, suppose we took that out and put vegetarian protein sources in, which may lower cholesterol,' Dr. Jenkins said. 'We know that nuts lower cholesterol and prevent heart disease, and soy is eaten in the Far East, where they don't get much heart disease. So we put these foods together as protein and fat sources.'

@Multilevel_Halikulov

IV. The first official warning about the dangers of the Atkins diet was issued by the government amid concern about the rising number of people opting for the high-fat, high-protein diet. Cutting out starchy foods can be bad for your health because you could be missing out on a range of nutrients. Low-carbohydrate diets tend to be high in fat, and this could increase your chances of developing coronary heart disease.

V. Earlier this year, a large study that compared different kinds of diets — including low-fat and low-carbohydrate plans — found that the method didn't matter as long as people out calories. That study also found that after two years, most people had regained at least some of the weight they had lost. Dr. Tuttle said that while different weight loss plans offer people different 'tricks' andstrategies, ultimately, 'It really comes down to calories in and calories out.'

VI. When you think about nutrition, be aware of serving sizes. Many people will eat everything on their plate, regardless of how hungry they actually are. If you know you tend to clean your plate, make an effort to reduce your serving size. If you're eating out or dining at a friend's house, don't be shy about asking for smaller portion sizes. Too much of any one food is a bad thing. There are no bad foods, just bad eating habits.

PART 4

Read the following text and choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

Cats in the Hermitage

At the parking lot near the Hermitage in St. Petersburg there is an unusual road sign. It says Cats crossing. It was introduced to protect the cats living on the territory. The Hermitage cats have become an attraction of their own and a special attraction for young visitors. The museum director keeps saying that the cats; interest journalists even more than the exhibits themselves!

He is right. Even the ravens of the Tower of London could envy the fame of the Hermitage cats. Firstly, each one has a passport and a personal plate and a collar. Secondly, they undergo regular vet check-ups. Their meals are cooked in a special kitchen in the basement. Finally, they are welcomed on the annual Cats' Day celebrated in May and are honorable guests there.

Kindly called the hermics, the cats feel at home inside the museum. They are free to go wherever they like, within some reasonable limits of course. In fact, there are classes inside the animal community. The most privileged are allowed into the halls and stairs, others live in the basement and in the yard.

The tradition of cats' privileges goes back to the 18th century. The first cats brought to the Winter Palace were divided into indoor and outdoor ones. . .

At that time, the Winter Palace was occupied by rats. The hungry creatures were destroying the royal food stores and belongings. By the order of Empress Elizabeth I, 30 cats were brought from Kazan to help the situation.

@Multilevel_Halikulov

They were carefully selected among the many cats as the strongest and the quickest rat-hunters. In time, the children of the Kazan cats became the pets of the royal family. '
The hardest time for cats in the Hermitage was the Siege of Leningrad during World War II. There were almost none of them left in the city. The rats multiplied enormously and a cat became worth its weight in gold. The authorities used the old method and ordered four carriages of cats from Yaroslavl. Five thousand male hunters arrived to save the museum. And they succeeded in their mission! Now there are about 60 cats in the museum and each of them has a name. The names come from painters, cities and states, and there is a legend about one of them, Vaska, the Lawyer. This cat was the hero of the battles against the rats in the 1960s. His second name came from the Law Department that Vaska enjoyed visiting.
Having lost interest in law, the cat settled at the front entrance to the Hermitage. There he played a more important role as a porter and got more food. Every morning half an hour before opening, he called the guards to the doors with a loud mew. When the first visitors entered the hall, he would lay by the stairs to get more attention.
Among the visitors there were many volunteers to help take care of the cats. Today the museum covers the cats' living expenses. Also, there are Sponsors eager to take part. On Cats' Day visitors are allowed into the basement to watch the cats' everyday life. Some cats are available for adoption and people are happy to take them home as a symbol of the Hermitage.

21. It is stated that the road sign near the Hermitage…
A) is far from a parking lot
B) is built to defend cats
C) has more interest than the Hermitage itself
D) is bigger than Tower of London
22. The tradition of cats' privileges goes back to the …
A) nineteen century
B) the contruction of Winter Palace
C) time when Elizabeth I ordered to bring the cats from Kazan
D) rats disappearance
23. Cats became very expensive when …
A) Winter Palace had rat infestation problem
B) Tourists started to come
C) Leningrad was besieged
D) five thousand male hunters arrived
24. Vaska the Lawyer …
A) survived the Battle of Leningrad
B) was named after the Law Department
C) called the guards the moments after opening
D) seeked attention from the visitors

@Multilevel_Halikulov

25. The director of the Hermitage dislikes cats.
A) True **B)** False **C)** No Information
26. Cats in the Hermitage are taken good care of .
A) True **B)** False **C)** No Information
27. There are several different areas for cats in the Hermitage. '
A) True **B)** False **C)** No Information
28. Cats appeared in the Winter Palace to entertain the Empress.
A) True **B)** False **C)** No Information
29. All the cats delivered to the Hermitage from Yaroslavl were common domestic cats.
A) True **B)** False **C)** No Information

PART 5

Now it is becoming clear that group decisions are also extremely valuable for the success of social animals, such as ants, bees. birds and dolphins. Bees make collective decisions, and they do it rather well, according to Christian List of the London School of Economics, who has studied group decision-making in humans and animals. Researchers led by Dr List looked at colonies once the original colony reaches a certain size. The queen goes off with about two-thirds of the worker bees to live in a new home or nest, leaving a daughter queen in the old nest with the remaining workers. Among the bees that depart are some that have searched for and found some new nest sites, and reported back using a characteristic body movement known as a 'waggle dance' to indicate to the other bees the suitable places they have located. The longer the dance, the better the site. After a while, other bees start to visit the sites signalled by their companions to see for themselves and, on their return, also perform more waggle dances. The process eventually leads to a consensus on the best site and the breakaway swarm migrates. The decision is remarkably reliable, with the bees choosing the best site even when there is only small difference between alternative sites.
But exactly how do bees reach such a robust consensus? To find out, Dr List and his colleagues used a computer-generated model of the decision-making process. By experimenting with it they found that, when bees in the model were very good at finding nesting sites but did not share their information, this dramatically slowed down the migration. leaving the swarm homeless and vulnerable. Conversely. bees in the model blindly following the waggle dances of others without first checking. The researchers concluded that the ability of bees to identify successfully and quickly the best site depends on both the bees ‘interdependence in communicating the whereabouts of the bees’ site, and their independence in confirming this information for themselves.
Another situation in which collective decisions are taken occurs when animals are either isolated from crucial sources of information or dominated by other

@Multilevel_Halikulov

members of the group. José Halloy of the Free University of Brussels in Belgium used robotic cockroaches to subvert the behaviour of living cockroaches and control their decision-making process. In his experiment, the artificial bugs were introduced to the live ones and soon became sufficiently socially integrated that they were perceived by the real cockroaches as equals. By manipulating the robots, which were in the minority, Halloy was able to persuade the living cockroaches to choose an inappropriate shelter-even one which they had rejected before being infiltrated by the robots.
The way insects put into effect collective decisions can be complex and as important as the decisions themselves. At the University of Bristol, in the UK, Nigel Franks and his colleagues studied how a species of ant establishes a new nest. Franks and his associates reported how the insects reduce the problems associated with making a necessarily swift choice. If the ants' existing nest become suddenly threatened, the insects choose certain ants to act as scouts to find a new nest.
How quickly they accomplish the transfer to a new home depends not only on how soon the best available site is found, but also on how quickly the migration there can be achieved.
Once the suitable new nest is identified, the chosen ants begin to lead others, which have made it to the new site or which may simply be in the vicinity, back to the original threatened nest. In this way, those ants which are familiar with the route can help transport, for example, the queen and young ants to the new site, and simultaneously show the way to those ants which have been left behind to guard the old nest. In this way moving processes are accomplished faster and more efficiently. Thus, the dynamics of collective decision-making are closely related to the efficient implementation of those decisions. How this might apply to choices that humans make is, as yet, unclear. But it does suggest, even for humans, the importance of recruiting dynamic leaders to a cause, because the most important thing about collective decision-making, as shown by these insect experiments, is to get others to follow.

Questions 31-35
Complete the summary below.
Choose NO MORE THAN ONE WORD from the passage for each answer.

A study of insect decision-making
A Bristol University study looked at how insects make decisions when their home has been **30.**_____**.** The ants in the experiment relied on the use of individuals called **31.**_____ new nest and efficiently direct the others to go there. The study concluded that the effective implementation of the ants' decision meant that the insects could change homes quickly. The study emphasized the necessity, for **32.**_____ well as insects, of having active **33.**_____ in order to execute decisions successfully.

@Multilevel_Halikulov

34. According to the passage, the waggle dance …

A) is a bee mating dance
B) performed by only queen bees
C) is a signal dance used by nest-less bees
D) leads to bees being banished from their homes

35. What's the writer's conclusion in the text?

A) to inform that collective decision-making is exclusive to insects
B) to argue that the main thing about decision-making is making others follow
C) to suggest that the humans have much to learn from the nature
D) to criticize the lack of collective decision-making on humans.

@Multilevel_Halikulov
