MULTILEVEL · CEFR

HOW TO USE THIS BOOK

Practice Book
Part by part

This book trains every part of the **Multilevel (CEFR)** exam separately, with many real-format practice tests for each part. Learn the strategy, practise until the task feels easy, then move on.

🎯 Part by part
Each section trains ONE exam part with many practice tests, so you master the task type before the full exam.

💡 Strategy first
Every part starts with a short 'How to do it' box. Read it before the first test.

🎧 Audio
Scan the QR code and play the recording for each test. You hear every recording twice.

📝 My answers
Write your answers in the grid at the end of each part and track your score.

🔑 Answer key
Check your answers at the back of the book.

🎧 Audio for all listening tests
Scan the QR code to open our Telegram channel.

📖	1	Gap fill: one word from the text	1–6	8
📖	2	Match texts to statements	7–14	8
📖	3	Match headings to paragraphs	15–20	8
📖	4	Multiple choice + True / False / No information	21–29	8
📖	5	Summary completion + multiple choice	30–35	8

LISTENING · PART 1

🎧 CHOOSE THE CORRECT REPLY

8 practice tests
Questions 1–8
🎧 Audio: t.me/multilevel_express

💡 How to do Part 1

- Read the three replies before you listen and think about what kind of sentence each one answers (a question, an offer, an apology...).
- Listen for the function, not for repeated words — an option that repeats a word you hear is often a trap.
- You hear each sentence twice: choose on the first listening, check on the second.

TEST 1

Questions 1–8

🎧 **You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.**

1

A) I am proposed.
B) Quite well, actually.
C) Likewise.

2

A) The red one.
B) I want to know when.
C) I have chosen.

A) For a minute.
B) Tomorrow.
C) All day.

4

A) It must be expensive.
B) I haven't bought it.
C) Yeah, it is.

5

A) I will tell Mark.
B) It's a good mark, really.
C) Oh, Ok.

6

A) I'll pick up my dog.
B) We better go home.
C) I like cats, actually.

7

A) He must be busy.
B) He has a presume.
C) I'll arrive there ASAP.

8

A) We can build it too.
B) I heard it's the gym.
C) Our school is big.

TEST 2

Questions 1–8

🎧 **You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.**

1

A) I think so. It should be.
B) No, I think that's all that I need.
C) Sure, no problem.

2

A) Sure, no problem.
B) When does it happen?
C) Why, we are in no rush!

3

A) You should take a class.
B) Read the manual.
C) There's nothing we can do.

4

A) Should we cross it too?
B) Why did he do that?
C) When did it happen?

5

A) I'll try again next time.
B) Ok, I'll pick them up.
C) Of course, I fed them today.

6

A) I live with my grandparents.
B) We went to party with my family yesterday.
C) Yes, We do. Always.

7

A) That is her sister.
B) Where?
C) Marie is so sad today.

8

A) Ok, I will

B) No, but I'm happy for them.
C) What is it?

7
A) It'll be 10$.
B) I'll take you.
C) 55 minutes.

8
A) Get some rest.
B) That's crazy.
C) Impossible!

TEST 8

Questions 1–8

You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.

1
A) No, that would be too difficult.
B) Yes, I would be happy to help you.
C) I would like your help with that.

2
A) Me too.
B) Oh, sorry for being late.
C) So did it.

3
A) No idea.
B) Some lemonade.
C) I'll think about it tomorrow.

4
A) Why are we watching it?
B) Yes, indeed.
C) I can watch it now.

5
A) No, they don't.
B) I think so.
C) When?

6
A) At half past eight.
B) Hurry up!.
C) Well, it can go

7
A) No way!
B) What time are you leaving?
C) Sure!

8

A) Oh excuse me?
B) Well, how about we get something crispy?
C) Ok, I'll have some water instead.

LISTENING · PART 3

🎧 MATCH THE SPEAKERS

8 practice tests
Questions 15–18
🎧 Audio: t.me/multilevel_express

💡 How to do Part 3

- Underline the key idea in each option A–F before you listen.
- Speakers rarely use the same words as the options — listen for the meaning (paraphrase).
- Two options are extra. Use the second listening to check the speakers you were unsure about.

TEST 1

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) A programmer.
16. Speaker 2 ...	B) A supermarket assistant.
17. Speaker 3 ...	C) A nurse.
18. Speaker 4 ...	D) A fast-food cook.
	E) A business manager.
	F) A restaurant manager.

TEST 2

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) a doctor
16. Speaker 2 ...	B) a circus trainer
17. Speaker 3 ...	C) a retired person
18. Speaker 4 ...	D) a zoo keeper
	E) a pet shop owner
	F) a blind person

TEST 3

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) critical
16. Speaker 2 ...	B) easily influenced
17. Speaker 3 ...	C) tough
18. Speaker 4 ...	D) careless
	E) moody
	F) arrogant

TEST 4

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) to strengthen a relationship
16. Speaker 2 ...	B) to get some personal space
17. Speaker 3 ...	C) to help deal with extensive responsibilities
18. Speaker 4 ...	D) to meet the demands of colleagues
	E) to cope with unpredictability
	F) to avoid unfair criticism

TEST 5

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) to record certain images
16. Speaker 2 ...	B) to view a particular exhibit
17. Speaker 3 ...	C) to listen to a lecture
18. Speaker 4 ...	D) to seek expert opinion
	E) to check some data
	F) to do some research

TEST 6

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...	A) broader knowledge of the industry
16. Speaker 2 ...	B) improved IT skills
17. Speaker 3 ...	C) ideas for a future career
18. Speaker 4 ...	D) pride in an achievement
	E) greater self-awareness
	F) the ability to work with colleagues

TEST 7

Questions 15–18

🎧 **You will hear people speaking in different situations. Match each speaker (15-18) to the description they give about another person(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.**

15. Speaker 1 ...

LISTENING · PART 5

🎧 MULTIPLE CHOICE: THREE EXTRACTS

8 practice tests
Questions 24–29
🎧 Audio: t.me/multilevel_express

💡 How to do Part 5

- Read the context line of each extract — who is speaking and where?
- There are two questions per extract and they follow the order of the conversation.
- Questions often test opinion, attitude or purpose — listen to the whole idea, not single words.

TEST 1

Questions 24–29

🎧 **You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.**

Extract One

24 Many parents ...
A) don't have the time or knowledge to help with their children's homework.
B) think that schools should have the knowledge of how to help with their children's homework.
C) don't want to help with their children's homework.

25 The app ...
A) is for parents who wants the best tutor for their children.
B) is for students who want the most expensive and efficient teachers.
C) is for students who want to find a tutor.

Extract Two

26 Chris cannot attend to the study group because ...
A) he doesn't want to.
B) he has other study groups to attend to.
C) he has a task.

27 They agreed to meet ...
A) in the library
B) in the study hall
C) in the cafeteria

Extract Three

28 What has made Clara check on Ben?
A) He missed their class that day.
B) He's missed a few classes.
C) He has a lot of essays to write.

29 What is the main way Ben's anxiety is affecting normal life?
A) He feels stupid.
B) He can't remember what day it is.
C) He doesn't want to go out.

TEST 2

Questions 24–29

🎧 **You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.**

Extract One

24 What do we learn about the writer of the play?
A) He died.
B) He is dying.
C) He nearly died.

25 What do the speakers agree on?
A) The writer is quite predictable.
B) The writer's style has changed direction.
C) The play wasn't as funny as some of the writer's earlier plays.

Extract Two

26 According to Pablo Jenson
A) a variety of different shops tends to boost sales.
B) traders that have something in common can boost each other's sales.
C) butchers are the most successful traders.

27 Jenson's theory
A) advertised for similar retailers to open shops in one particular area.
B) works better for bakers and butchers than for other kinds of retailers.
C) seems to have been proved to be credible.

Extract Three

28 The Costa de la Cruz
A) is being spoiled by developers.
B) is the cheapest area of Spain in which you can buy a holiday home.
C) is close to Portugal.

29 According to Chris Mercer
A) there is a danger that the Costa de la Cruz will lose its appeal.
B) the Costa de la Cruz can be developed without the area being damaged.
C) the government has put a stop to the Costa de la Cruz being developed further.

TEST 3

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

24 Both speakers refer to a feeling of

A) over-confidence.
B) embarrassment.
C) achievement.

25 The two speakers agree that a big problem with speaking in public is

A) losing the audiences attention during a speech.
B) choosing the wrong content for a speech.
C) feeling nervous at the thought of giving a speech.

Extract Two

26 The poster campaign came at a time when

A) various aspects of life in London were changing.
B) many people were reluctant to travel on the Underground.
C) the use of posters for advertising was increasing.

27 What does Zoe say about the content of the posters?

A) It only appealed to a certain type of person.
B) It contrasted with real life for many people.
C) It influenced the lifestyles of some people.

Extract Three

28 What opinion does the man express about the news media?

A) It doesn't deserve its reputation.
B) It has become more influential.
C) Its standards have risen.

29 The woman mentions medical stories

A) to explain her attitude to the news media.
B) to illustrate the importance of the news media.
C) to describe why people dislike the news media.

TEST 4

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

24 How does the man feel about the book he's read on competitiveness?

A) surprised that it contradicts a well-established theory
B) confused by the wide range of evidence it quotes
C) unsure about certain aspects of its argument

25 The woman feels that in the business world, prioritising competitiveness leads to

A) a demotivating effect on the workforce.
B) a constant drive towards greater productivity.
C) an obsession with short-term goals.

Extract Two

26 They both say that

A) restaurants use clever tactics to attract new customers.
B) the research methods used seem valid.
C) the same colours can affect people in different ways.

27 The woman feels that the teenager's findings

A) could prove significant in the long-term.
B) need the backing of the scientific establishment.
C) confirm initial evidence about the way memory is viewed.

Extract Three

28 How does the woman feel about the programme?

A) surprised by its conclusion
B) confused by the approach it took
C) disappointed by the lack of explanation

29 What do they agree about music?

A) It has unexpected benefits.
B) Its effects on intelligence are obvious.
C) It's important to study its psychological impact.

TEST 5

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

24 What point does the tutor make about a teacher's attitude?

A) a good teacher can put any subject across effectively.
B) Students will pick up on a teacher's commitment.
C) There's little point in a teacher trying to fake passion for a subject.

25 What is Susanna doing?

A) complaining about her students' lack of enthusiasm
B) proposing ways of making her subject more appealing
C) asking for ideas about exercises her students could do

Extract Two

26 Sam is trying to

A) suggest how the visual impact could have been improved.
B) challenge Ella's preconceptions about the music.
C) persuade Ella to go to a similar one in the future.

27 In Sam's opinion, what makes the performer stand out?

A) the influence her academic background has on her music
B) the instinctive way she responds to her audience
C) the high level of stage presence she displays

Extract Three

28 Staff have been planting trees in order to

A) promote a desirable image.
B) encourage a spirit of mutual co-operation.
C) compensate for environmental damage.

29 The company was surprised that its remote working initiative resulted in

A) more appreciative customers.
B) a better standard of new recruits.
C) a more motivated workforce.

TEST 6

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You hear two friends talking about online privacy.

24 Why does the man mention his uncle?

A) to criticise his attitude to technology
B) to challenge a recommendation made by the woman
C) to illustrate the power of the media

25 They agree that modern technology

A) makes little difference to the accessibility of personal information.
B) is less invasive than some people suggest.
C) will continue to reduce people's privacy.

Extract Two

You hear two trainee chefs discussing the issue of food waste.

26 What does the woman think about her boss's ideas?

A) She's surprised at his forward-looking attitude.
B) She's dismissive of his attention to detail.
C) She's concerned about his generosity towards customers.

27 In reacting to the woman's comments, the man reveals that he is

A) determined to change practices at his own workplace.
B) unsure about the facts she is presenting to him.
C) doubtful whether his chef would accept new ideas.

Extract Three

You hear two students talking about an experiment into the way people perceive time.

28 The woman thinks the experiment was important because

A) it provided unexpected results.
B) it presented a great physical challenge.
C) it raised public awareness of the subject.

29 She believes celebrating special events

A) convinces people that time passes more quickly.
B) provides people with pleasant memories.
C) gives people a sense of structure when recalling the past.

TEST 7

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You hear part of a radio interview with a product designer called Charles Loughlan.

24 How does Charles feel about designers who put their names on products?

A) He understands their basic needs.
B) He is dismissive of their motives.
C) He admires their business skills.

25 What does Charles suggest about a good product?

A) Its appearance should reflect its function.
B) It should encourage a desire to possess it.
C) Its ecological impact should be considered.

Extract Two

You hear two friends discussing a TV interview with an actress called Celia Dent.

26 They agree that the interviewer made the mistake of

A) dominating the discussion.
B) asking predictable questions.
C) failing to listen fully to answers.

27 The man says that certain film stars can be difficult to interview because

A) they generally show a lack of spontaneity.
B) they're unwilling to reveal their true personality.
C) they're too anxious to promote their latest work.

Extract Three

You hear two freelance journalists talking about their work.

28 When talking about how he tackles a creative writing task, the man

A) points out how easily he can assume the right frame of mind.
B) tries to justify his antisocial behaviour when working.
C) admits that frequent breaks can be beneficial.

29 What does the woman say about her earlier writing?

A) She feels she no longer fully relates to it.
B) She tends to draw on similar themes in her current work.
C) She highlights the improvements she's noticed in her work.

TEST 8

Questions 24–29

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You hear two friends discussing a rock concert they both went to.

24 How does the boy feel about the main band?

A) disappointed by their performance
B) confused by all the advanced publicity
C) unsure whether he got value for money or not

25 What is the woman doing in her reply?

A) criticising the support band
B) defending the approach of the media
C) agreeing with comments about the main band

Extract Two

You hear part of a sports report about a football club manager.

26 What is the male presenter doing?

A) praising changes that the manager has made
B) suggesting that rumours about the manager are unfounded
C) describing a growing sense of dissatisfaction with the manager's performance

27 In the female presenter's opinion

A) the manager's strategy is the correct one
B) the real problem is a lack of talented players
C) the pressure on the manager is likely to increase

Extract Three

You hear two friends discussing an exhibition of modern sculpture.

28 **What does the woman particularly admire about the artist?**

A) the originality of his work
B) the way his art has developed
C) the issues that his sculptures raise

29 **What disappointed them both about the exhibition?**

A) the pieces of work that had been chosen
B) the information provided for visitors
C) the way it had been laid out

🎧 LECTURE NOTES

8 practice tests
Questions 30–35
🎧 Audio: t.me/multilevel_express

💡 How to do Part 6

- Read the notes first and predict the missing words.
- Write no more than ONE WORD for each answer, spelled correctly.
- The lecture is long — keep your place by following the notes line by line.

TEST 1

Questions 30–35

🎧 **You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.**

A WEB DEVELOPER

- He studied computer science at a university.
- After his graduation, he worked as a freelancer and now he works with a **(30)**_____.
- He believes that organization is crucial for developers, so he starts his work with arrangements.
- He usually divides his projects into **(31)**_____.
- After planning, he puts his mind on the pieces of a website which **(32)**_____ see and interact with.
- Then, he takes a break for a while.
- He may get a **(33)**_____ to eat.
- Debugging, he claims, needs much attention to detail.
- When debugging, he fixes problems in the **(34)** _____.
- Optimizing means, improving loading times and checking the efficiency of the site.
- To optimize a site, he may compress images or refine the code.
- He notes the process as **(35)**_____.
- At the end of the day, he communicates with his clients.

TEST 2

Questions 30–35

🎧 **You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.**

THE GRAND UNION CANAL

- The canals were built despite the fact that there was no public **(30)**_____ and very little technology.
- From 1790 to 1929, there were many canals that were **(31)**_____ with each other but which were not uniform in size.
- The new union of canals provided a **(32)**_____ link between major industrial cities.
- There are plenty of natural habitats for a variety of wildlife on and around the canals.
- Walkers can go to the nearest waterway office to get information on circular **(33)**_____ so they can start and end at the same place.
- Anglers can fish in the canals and **(34)**_____.
- If you want to go fishing, you must buy a rod license.
- The waterways authority request that people are **(35)** _____ towards the canal users.

TEST 3

Questions 30–35

🎧 **You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.**

MICROWAVE

- The invention of the microwave oven began when a chocolate peanut bar **(30)**_____ in Percy Spencer's pocket.
- Spencer had previously invented a method for mass-producing the tubes used in radar equipment.
- Spencer's first experiment involved putting **(31)** _____ near to some radar equipment.
- In his next experiment, an egg was put into a kettle and it **(32)**_____.
- The first microwave oven was set up in **(33)** _____ in Boston in 1946.
- The first microwave oven got its name as a result of a competition at the company.
- One problem with the first microwave oven was that **(34)** _____ did not change colour in it.
- When a microwave oven that could be placed on top of a **(35)**_____ was produced, sales began to rise.

TEST 4

Questions 30–35

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

VANILLA

- Susie says that, despite its cost, vanilla is the world's most **(30)**_____ spice.
- The vanilla plant is originally from Mexico, where it depends on a local **(31)**_____ for its existence.
- Susie says the term green gold is used to talk about vanilla plants on the island.
- Recently the vanilla harvest has been affected by **(32)** _____ and this impacts on the price.
- These days the vanilla plants are covered by **(33)** _____ for protection.
- Sometimes there are small holes in the vanilla seed pods to show which farm they come from.
- The vanilla pods are sun-dried and then **(34)** _____ briefly before being packed in boxes.
- The boxes used to store the pods are wrapped in **(35)** _____ to keep the heat in.

TEST 5

Questions 30–35

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

ROBOTS LIKE TERMITES

- Jim says termites differ from bees in that a **(30)** _____ is not responsible for organising their building work.
- Jim uses the word **(31)**_____ to refer to the group of robots he's created to function as independent units.
- Jim observed termites depositing partially consumed **(32)** _____ in shared habitats, which activated a response from other termites.
- Jim states that the robots receive enough feedback to help them correct any errors they make.
- Jim got a single robot to finish the construction of a **(33)** _____ when publicly demonstrating how simple structure building is performed.
- Jim predicts that his robots will soon be able to move **(34)** _____ into position to help people cope with the threat of floods.
- Jim compares both termites and his robots to brain cells, in that they all create a superior form of **(35)**_____ .

TEST 6

Questions 30–35

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

PROTECTING THE SEAS FROM POLLUTION

- The organisation Sarah works for is called Water response.
- Sarah was surprised to learn that seabirds have been known to eat light **(30)**_____ on occasions.
- Sarah says that plastic can be compared to a **(31)** _____ because of the way it absorbs dangerous substances.
- Sarah learned that the toxins in plastic harm the **(32)** _____ system of many creatures.
- Sarah explains how the breakdown of plastic items into small particles is caused by **(33)**_____ and the effects of the sun.
- Sarah says that most plastic in the sea has its origin in **(34)**_____ sources.
- Sarah gives the example of **(35)**_____ as something to use instead of household detergents.
- Sarah strongly advises car owners to prevent oil leaking from their vehicles.

TEST 7

Questions 30–35

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

WORKING WITH CHOCOLATE

- Janine trained as a chemist before working for her current employer.
- Janine found her background particularly helpful when working on a project to put **(30)**_____ into chocolate.
- Janine uses the word **(31)**_____ to describe chocolate as a substance to work with.
- Janine mentions the method of **(32)**_____ the cocoa beans as a variable affecting the taste of her chocolate.
- Janine says that ideas for new types of chocolate generally come from her company's **(33)**_____ department.
- Janine says the staff responsible for packaging play a surprisingly important role in developing a new chocolate product.
- Janine gives the example of **(34)**_____ as a group that need to be considered when designing the label for a product.
- Janine thinks that **(35)**_____ is the most essential quality needed for her job.

TEST 8

Questions 30–35

🎧 **You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.**

You will hear a man called Carl Pitman, giving a group of tourists practical advice about learning the sport of surfing.

LEARNING THE SPORT OF SURFING

- Carl recommends the national park as the best place for learning to surf in his area.
- Carl uses the term **(30)**_____ to describe the distance between waves.
- Carl advises getting a wetsuit that has a **(31)** _____ fit.
- Carl says it's important to check the quantity of material beneath the **(32)**_____ of a new wetsuit.
- Carl says that the wetsuit, **(33)**_____ and footwear all need washing regularly.
- According to Carl, a hanger made of **(34)**_____ is best for storing wetsuits.
- Beginners most often damage surfboards through contact with their knees.
- Carl suggests using a **(35)**_____ as the first step in removing wax from a surfboard.

📖 GAP FILL: ONE WORD FROM THE TEXT

8 practice tests
Questions 1–6

💡 How to do Part 1

- Every missing word appears somewhere else in the text — scan for it.
- Check the grammar around the gap: singular/plural, verb form, article.
- Read the whole sentence again with your word in it.

TEST 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

The online retail giant Amazon has released its first ever big-budget PC game. The game is called Crucible. It is a science-fiction shooter **(1)**_____. It has many unusual characters that have special powers. Crucible is currently only available in North America, where people can download it from the video distribution website Steam. Amazon said the game will be **(2)**_____ in other parts of the world soon. Crucible was created by Amazon Game Studios and Relentless Studios and is free. Amazon is a newcomer in the video games market. It hopes to become a major producer of games. Many experts on **(3)**_____ games believe Crucible could be very successful. They say it could be a rival to the game Fortnite.

Crucible is set in an apocalyptic world on a fictional planet in outer space. Very few people can walk around outside on this **(4)**_____. Players can go outside but they must hunt and kill different creatures and monsters. They must also collect a special material called "essence". This helps **(5)**_____ level up and become stronger. Mike Frazzini, the vice president of Amazon Games, spoke about Crucible. He said he hoped it would help people to connect with each other. He told reporters: "We want to make games that resonate with a very large audience of players." He added: "One of the reasons I've always loved games is not only is it a fun form of entertainment, but it's a way to **(6)**_____ with others."

TEST 2

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

Early risers are people who naturally wake up early in the morning. Their body clock causes them to get up while most of us are still in deep sleep. Researchers at the University of California said early **(1)**_____ could have some shared DNA from Neanderthals – our ancestors who lived over 40,000 years ago. Neanderthals lived in northern parts of Europe and Asia. They **(2)**_____ up earlier to hunt for or gather food as the sun rose. Researcher Dr Tony Capra said: "At higher latitudes it is beneficial to have a body **(3)**_____ that is better able to anticipate and change to match the changing seasonal light levels." He added: "Having a 'faster' body clock... makes individuals more likely to rise early."

Scientists have spent a long time looking at why some people are early birds, while others are night owls. They looked at a medical database with genetic information for hundreds of thousands of **(4)**_____. They compared the DNA of people who said they were early risers with the Neanderthal DNA. The **(5)**_____ found more examples of Neanderthal DNA existed in the early risers. However, it is likely that the Neanderthal gene is not so strong in many people. The effect of the Neanderthal DNA may be weakening as the centuries pass. Our modern lifestyles mean many of us prefer sleeping in to leaving the comfort of our bed. Nevertheless, it may still be true that the early **(6)**_____ catches the worm.

TEST 3

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

It is common knowledge that we have five senses. Some people believe they have six senses. They say their sixth sense is the ability to know something without using the ordinary five **(1)** _____ of sight, hearing, smell, touch and taste. Scientists have just discovered that some dolphins have seven senses. Researchers in Germany say bottlenose dolphins can sense electricity produced by their prey. The **(2)**_____ can detect the electric pulses produced by the heart beats of other sea creatures. This could help dolphins to find their next meal. Dolphins also use their excellent eyesight and sonar to sense what is around them. This seventh sense may also help them to navigate using Earth's magnetic field.

The researchers conducted a study on two dolphins named Dolly and Donna. Experiments tested what kinds of **(3)** _____ the dolphins could detect. Dolly and Donna could sense both kinds of electricity – direct current and alternating **(4)**_____. They were a lot better at picking up direct current. All organisms produce direct current electricity in water. The researchers say being able to **(5)** _____ this means dolphins may be able to sense the location of most kinds of fish that are near them. The dolphins could use their **(6)**_____ sense to hunt, even if they cannot see or hear well, or if they cannot use their other senses. The study has been published in the "Journal of Experimental Biology".

TEST 4

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

One of the most annoying things in life is an itch that won't go away. Scientists have worked for decades to find out why we **(1)** _____, and to find a cure. Researchers at Harvard Medical School in the USA have discovered that skin bacteria make us itch when they interact with our nerve cells. Lead researcher Liwen Deng said the **(2)**_____ are linked to many diseases that cause itchiness. The most common disease is eczema. Dr Leng wrote: "It's not the nicest bug to have on you, for sure. Many patients carry on their **(3)**_____ the very microbe we've now shown for the first time can induce itch." She added that: "Itches can be quite debilitating in patients who suffer from chronic skin conditions."

Dr Leng and her colleagues conducted their research on mice. They found an enzyme (which they dubbed V8) that was responsible for itching in the test mice. The V8 enzyme triggered a protein that made the **(4)**_____ itch. The scientists engineered the protein and developed a drug to stop it making the mice itch. The **(5)**_____ could be used to make anti-itch medication. This could block the itching process in humans. This is good news for **(6)**_____ sufferers. Eczema affects around 245 million people globally. As well as itchiness, sufferers often get redness on their skin and a rash. They may also get small blisters and a thickening of the skin. Eczema is twice as common in females as it is in males.

TEST 5

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

Is it possible to spend over $2 million on a hat? The answer is "yes" if the **(1)**_____ once belonged to the French emperor Napoleon Bonaparte. An iconic hat that Napoleon is most famous for was sold at an auction this week for $2.1 million. This is a record for a hat, so it is the most expensive piece of headwear ever sold. The auction sale broke the previous **(2)**_____ for a hat, which was $2 million. That hat also once belonged to Napoleon. A historian said Napoleon liked hats and owned around 120 of them. This week's record-breaking hat is made of felt and has the red, white and blue colours of the French flag on it. Experts say it dates back to the early 1800s. Thousands of artists have created paintings of Napoleon wearing it.

Napoleon is one of France's **(3)**_____ famous historical figures. He was a general who played a key part in the French Revolution of 1787-1799. He helped to take over the French government, and then became **(4)**_____ of France in 1804. His reign as emperor came to an end in 1815 after he lost the Battle of Waterloo to the British. He was sent to live on a remote island in the South Atlantic Ocean called St. Helena. He died there six years later in 1821, aged 51. The **(5)** _____ of his hat coincides with the release of a new Hollywood movie about his rise to power, and his relationship with the empress Josephine. The **(6)**_____ is called "Napoleon". It is directed by Ridley Scott and stars Joaquin Phoenix as Napoleon and Vanessa Kirby as Josephine.

TEST 6

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

The 1984 movie "Purple Rain" is going to be made into a musical on Broadway, New York. The film was based on the album of the same name **(1)**_____ by the artist Prince. He also starred in it. This should encourage people to go to see the **(2)** _____ version. The producers of the new musical are excited about their project. They said: "It's been 40 years since Prince's legendary film took the world by storm. We can't think of a more fitting tribute to honour Prince and his legacy than with this stage adaptation of the beloved story." They added: "We can't wait for a new generation to discover 'Purple Rain' and...to experience its power once again, this time live."

"Purple Rain" the movie won an Academy Award for Best Original Song Score. Many critics believe "Purple Rain" is one of the greatest musical **(3)**_____. "Purple Rain" the album spent 24 consecutive weeks at number one in the USA's Billboard 200 music chart. It spent a total of 167 **(4)** _____ on that chart. It contains the smash hit "When Doves Cry". The movie is about an aspiring singer and guitarist who was trying to become famous. The story shows his complicated home life, his battles with **(5)**_____ musical rivals, and a new romance. Prince died in 2016 from an overdose of painkiller drugs. He sold over 100 million records worldwide. This makes him one of the best-selling music **(6)** _____ of all time.

TEST 7

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A famous song and a quiz show ask, "Who wants to be a millionaire?" For decades, having a million dollars was the goal of the super-rich. Now, the goal is a billion dollars. The anti-poverty charity Oxfam has just issued a report that says in the next ten years, the world will have its first trillionaire. A **(1)** _____ is a huge number and an unbelievable amount of money. It is a one, followed by 12 zeros. A trillion is equal to one million million. The charity said the wealth gap between the **(2)**_____ and poor is growing. It said the gap has been "supercharged" since the coronavirus pandemic. It added: "We will have a trillionaire within a decade, whereas to fight poverty, we need more than 200 **(3)**_____."

Oxfam spoke about inequality at the World Economic Forum's annual meeting. As an example, it said the **(4)**_____'s five richest people have seen their wealth increase by 114 per cent since 2020. A charity spokesperson said: "The top five billionaires have doubled their **(5)**_____. On the other hand, almost five billion **(6)**_____ have become poorer." Tesla CEO Elon Musk is the richest man on the planet. He has a personal fortune of just under $250 billion. The AP news agency said: "If someone does reach that trillion-dollar milestone, he or she would have the same value as oil-rich Saudi Arabia." Oxfam said the world is now at the start of a "decade of division". It called for a "new era of public action" to reduce the wealth gap.

TEST 8

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A new form of transport will be with us in the next few years – flying taxis. Many of us grew up watching sci-fi movies with airborne **(1)**_____. Science fiction is now becoming science fact. The Japanese airline ANA has teamed up with a U.S. tech start-up called Joby Aviation. The two companies aim to start operating air taxis at the 2025 World Expo in Osaka. They are currently working together on building the **(2)** _____ vehicle. They also need to work out what traffic rules the taxis will need to follow, and **(3)**_____ kind of training flying taxi pilots will need. The five-seat, all-electric taxi will be able to take off and land vertically. It will have a flight range of 241 kilometers and a top speed of 321kph.

Joby's CEO said the taxis would be good for the environment. He told reporters: "Joby exists to help people save time while reducing their carbon footprint. Japan offers us a spectacular opportunity to do just that with 92 percent of the population living in urban areas, and Tokyo being one of the top 20 most congested cities in the world." The president of ANA, Koji Shibata, was also excited about the project. He said: "ANA has 70 **(4)**_____ of experience delivering safe and reliable flights to customers across the **(5)**_____. Being able to provide them with the option to travel rapidly, and sustainably, from an international airport location to a downtown **(6)** _____ is very appealing."

📖 MATCH HEADINGS TO PARAGRAPHS

8 practice tests
Questions 15–20

💡 How to do Part 3

- Read each paragraph's first and last sentences to find the main idea.
- A heading must cover the whole paragraph, not just one detail.
- Cross out headings as you use them; some are extra.

TEST 1 Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Legacy of Sassanids.
B) Once nomadic, then an empire.
C) The fall of the Empire.
D) Commercial influence.
E) Melting pot of nations.
F) Four major beliefs.
G) The distributor of faith.
H) In the middle of great civilizations.

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

KUSHAN EMPIRE

I. The Kushan Empire was a significant cultural and political entity that flourished in Central Asia and Northern India between the 1st and 3rd centuries CE. Its origins trace back to the Yuezhi, a nomadic group from the steppes of Central Asia. They established control over Bactria, a Hellenistic region, blending Greek, Persian, and Indian influences. The Kushans were instrumental in fostering trade along the Silk Road, connecting the East and West. Under their rule, arts, religion, and commerce flourished, making them a vital link in the ancient world's cultural and economic exchanges.

II. The Kushan Empire spanned a vast territory, including present-day Afghanistan, Pakistan, Northern India, and parts of Central Asia. It was strategically located along major trade routes, particularly the Silk Road. The empire's geographic position allowed it to act as a bridge between the Mediterranean, China, and Indian spheres of influences. This connectivity facilitated not only trade but also the exchange of ideas, technologies, and cultural practices. The Kushans expanded their influence through military conquests and diplomacy, securing their position as a dominant power in the region for over two centuries.

III. The Kushan Empire was pivotal in the flourishing of the Silk Road, a network of trade routes connecting Asia to Europe. The empire served as a hub for the exchange of goods such as silk, spices, gemstones, and textiles. Kushan coins, widely circulated, reflect their role in trade and economic integration. The Kushans also promoted caravanserais and security along trade routes, ensuring safe passage for merchants. This vibrant trade network enriched the empire economically and culturally, fostering interactions between diverse civilizations.

IV. Kushan art is a testament to the empire's diverse cultural influences, blending Greek, Indian, Persian, and Central Asian styles. The Gandhara School of Art, which thrived during their reign, is renowned for its Greco-Buddhist sculptures, particularly depictions of the Buddha. The Kushans were patrons of various art forms, including architecture, sculpture, and coinage. These artistic expressions not only reflected their cosmopolitan society but also played a significant role in spreading Buddhist iconography and religious ideas across Asia.

V. The Kushan Empire was a melting pot of religions, including Buddhism, Hinduism, Zoroastrianism, and Greek polytheism. They were instrumental in the spread of Buddhism to Central Asia and China. Emperor Kanishka, a notable Kushan ruler, convened the Fourth Buddhist Council, which contributed to the development of Mahayana Buddhism. The empire's tolerance and support for multiple faiths fostered a rich spiritual environment, influencing religious practices far beyond its borders.

VI. The decline of the Kushan Empire began in the 3rd century CE due to internal conflicts and external invasions, particularly by the Sassanid Empire and the Gupta Empire. Despite its fall, the Kushan Empire left a lasting legacy. It played a critical role in the cultural and economic integration of the ancient world. The empire's contributions to art, religion, and trade continue to be studied and celebrated, highlighting its importance in the history of Central and South Asia.

TEST 2

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) An ancient place
B) Holy water
C) Famous industry
D) Ajanta in the modern day
E) Resisting the heat
F) Things about Mumbai
G) City of contrasts
H) Modern languages' ancestor

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

I. The world's first university was established in India in 700 BC, where more than 10,500 students from around the world studied more than 60 different subjects. The training was conducted in Sanskrit. Nowadays, Sanskrit is considered to be the mother of all the European languages. Its elements can be traced in most of them.

II. The most frequently visited place in India is Delhi, the capital city of the country. It seems to be divided into two parts. New Delhi is a modern city with hi-tech architecture, tourist attractions and modern facilities. Old Delhi is several centuries old, with narrow streets, ancient churches and noisy bazaars. Lots of people live in slums without the most essential facilities like toilets and running water.

III. People all over the world know of India's greatest river, the Ganges. The river looks extremely beautiful in the morning light. It is the subject of thousands of prayers. It has become a common ritual for pilgrims to gather by the holy river in the mornings. It is believed that bathing in the Ganges helps to cure all kinds of diseases and can improve your life in general.

IV. Indian climate differs from one part of the country to another. The air is cool and fresh in the mountains, but in the plains it is usually very hot and dry, so even a short trip can be very hard for an inexperienced traveller. That is why tourists are always glad to have a rest at one of the numerous stations in the hills. There they can enjoy a nice cup of real Indian tea, the most refreshing drink in such a climate.

V. India is not all history. It is also famous for its Bollywood industry, which produces different films. Indian films have always had their own style; they are rich in music and dancing. Though the industry is still developing, many Indian film stars have received Oscar prizes and are known throughout the world. The home of Bollywood is Mumbai, also known as a busy port and the country's commercial centre.

VI. There is an unusual treasure hidden in the Indian mountains. These are striking ancient temples cut in the rocks. For example, the Buddhist cave temples at Ajanta were built at least 2,000 years ago. Inside the caves on the walls, tourists can see animal images and pictures of people's lives. Some researchers believe that the interpretation of the images can help us to learn a lot about people's lives in ancient times.

TEST 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Young helpers
B) Importance of discipline
C) Home education
D) Awkward moments
E) A warm welcome
F) Daddy day care
G) Sibling rivalry
H) Methods of persuasion

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

I. Family reunions can be a joyous occasion and an opportunity to meet new family members as well. Our parents have aunts, uncles and cousins that we may only meet once or twice in life. Often, though, meeting an extended family member can be like meeting a complete stranger. You're not even sure you will like them, and the whole affair can feel a bit odd or uncomfortable.

II. Traditionally, the mother is the primary caregiver to an infant child. She takes time off work and stays at home to provide round-the-clock attention during the child's early years. But recently, more and more men are taking paternity leave from work to stay at home with their new-borns. Mothers find it a welcome trend, as caring for an infant can be exhausting work.

III. While it's true that kids must carry out their responsibilities just as adults do, sometimes Mum and Dad have to be a bit crafty to make it happen. They have to offer a little reward for a job well done. It may not be good practice to do it all the time, but if they promise a trip to the cinema, for example, the kids will be more likely to clean their rooms.

IV. Many families live far away from one another these days. They may have moved across the country, or even to the other side of the world. It's especially hard for parents to see their children do this, either for work or for adventure. So when special occasions come round, especially the holiday seasons, Mum and Dad are so grateful when their sons and daughters return home.

V. Sometimes a household is nothing but chaos for days on end. This is especially true when kids reach their adolescent phase, and you have a couple of teenagers who compete over every little thing in life. No matter how often parents attempt to stop two kids from fighting each other, nothing seems to work. They just have to wait until one of them moves away to university!

VI. In most families, parents have to constantly remind their children of their responsibilities. But there are times when kids can be especially useful round the house of their own will. They also understand those times when Mum or Dad isn't feeling well, and maybe it would be nice if they made dinner for a change or did a little extra tidying up in the living room.

TEST 4

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Considering ecological costs
B) Modifications to the design of the snow gun
C) The need for different varieties of snow
D) A problem and a solution
E) Converting wet snow to dry snow
F) New method for calculating modifications
G) Artificial process, natural product
H) Snow formation in nature

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SNOW-MAKERS

I. In the early to mid-twentieth century, with the growing popularity of skiing, ski slopes became extremely profitable businesses. But ski resort owners were completely dependent on the weather: if it didn't snow, or didn't snow enough, they had to close everything down. Fortunately, a device called the snow gun can now provide snow whenever it is needed. These days such machines are standard equipment in the vast majority of ski resorts around the world, making it possible for many resorts to stay open for months or more a year.

II. Snow formed by natural weather systems comes from water vapour in the atmosphere. The water vapour condenses into droplets, forming clouds. If the temperature is sufficiently low, the water droplets freeze into tiny ice crystals. More water particles then condense onto the crystal and join with it to form a snowflake. As the snow flake grows heavier, it falls towards the Earth.

III. The snow gun works very differently from a natural weather system, but it accomplishes exactly the same thing. The device basically works by combining water and air. Two different hoses are attached to the gun. One leading from a water pumping station which pumps water up from a lake or reservoir, and the other leading from an air compressor. When the compressed air passes through the hose into the gun. It atomizes the water - that is, it disrupts the stream so that the water splits up into tiny droplets. The droplets are then blown out of the gun and if the outside temperature is below 0°C, ice crystals will form, and will then make snowflakes in the same way as natural snow.

IV. Snow-makers often talk about dry snow and wet snow. Dry snow has a relatively low amount of water, so it is very light and powdery. This type of snow is excellent for skiing because skis glide over it easily without getting stuck in wet slush. One of the advantages of using a snow-maker is that this powdery snow can be produced to give the ski slopes a level surface. However, on slopes which receive heavy use, resort owners also use denser, wet snow underneath the dry snow. Many resorts build up the snow depth this way once or twice a year, and then regularly coat the trails with a layer of dry snow throughout the winter.

V. The wetness of snow is dependent on the temperature and humidity outside, as well as the size of the water droplets launched by the gun. Snow-makers have to adjust the proportions of water and air in their snow guns to get the perfect snow consistency for the outdoor weather conditions. Many ski slopes now do this with a central computer system that is connected to weather-reading stations all over the slope.

VI. But man-made snow makes heavy demands on the environment. It takes about 275,000 litres of water to create a blanket of snow covering a 60x60 metre area. Most resorts pump water from one or more reservoirs located in low-lying areas. The run-off water from the slopes feeds back into these reservoirs, so the resort can actually use the same water over and over again. However, considerable amounts of energy are needed to run the large air-compressing pumps, and the diesel engines which run them also cause air pollution.

TEST 5

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) The biological clock
B) Why dying is beneficial
C) The ageing process of men and women
D) Prolonging your life
E) Limitations of life span
F) Modes of development of different species
G) A stable life span despite improvements
H) Energy consumption

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

HOW DOES THE BIOLOGICAL CLOCK TICK?

I. Our life span is restricted. Everyone accepts this as 'biologically' obvious. 'Nothing lives for ever!' However, in this statement we think of artificially produced, technical objects, products which are subjected to natural wear and tear during use. This leads to the result that at some time or other the object stops working and is unusable ('death' in the biological sense). But are the wear and tear and loss of function of technical objects and the death of living organisms really similar or comparable?

II. Thus ageing and death should not be seen as inevitable, particularly as the organism possesses many mechanisms for repair. It is not, in principle, necessary for a biological system to age and die. Nevertheless, a restricted life span, ageing, and then death are basic characteristics of life. The reason for this is easy to recognise: in nature, the existent organisms either adapt or are regularly replaced by new types. Because of changes in the genetic material (mutations) these have new characteristics and in the course of their individual lives they are tested for optimal or better adaptation to the environmental conditions. Immortality would disturb this system - it needs room for new and better life. This is the basic problem of evolution.

III. Every organism has a life span which is highly characteristic. There are striking differences in life span between different species, but within one species the parameter is relatively constant. For example, the average duration of human life has hardly changed in thousands of years. Although more and more people attain an advanced age as a result of developments in medical care and better nutrition, the characteristic upper limit for most remains 80 years. A further argument against the simple wear and tear theory is the observation that the time within which organisms age lies between a few days (even a few hours for unicellular organisms) and several thousand years, as with mammoth trees.

IV. If a life span is a genetically determined biological characteristic, it is logically necessary to propose the existence of an internal clock, which in some way measures and controls the ageing process and which finally determines death as the last step in a fixed programme. Like the life span, the metabolic rate has for different organisms a fixed mathematical relationship to the body mass. In comparison to the life span this relationship is 'inverted': the larger the organism the lower its metabolic rate. Again this relationship is valid not only for birds, but also, similarly on average within the systematic unit, for all other organisms (plants, animals, unicellular organisms).

V. Animals which behave 'frugally' with energy become particularly old, for example, crocodiles and tortoises. Parrots and birds of prey are often held chained up. Thus they are not able to 'experience life' and so they attain a high life span in captivity. Animals which save energy by hibernation or lethargy (e.g. bats or hedgehogs) live much longer than those which are always active. The metabolic rate of mice can be reduced by a very low consumption of food (hunger diet). They then may live twice as long as their well fed comrades. Women become distinctly (about 10 per cent) older than men. If you examine the metabolic rates of the two sexes you establish that the higher male metabolic rate roughly accounts for the lower male life span. That means that they live life 'energetically' - more intensively, but not for as long.

VI. It follows from the above that sparing use of energy reserves should tend to extend life. Extreme high performance sports may lead to optimal cardiovascular performance, but they quite certainly do not prolong life. Relaxation lowers metabolic rate, as does adequate sleep and in general an equable and balanced personality. Each of us can develop his or her own 'energy saving programme' with a little self-observation, critical self-control and, above all, logical consistency. Experience will show that to live in this way not only increases the life span but is also very healthy. This final aspect should not be forgotten.

TEST 6 **Questions 15–20**

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Not identifying the correct priorities
B) A solution for the long term
C) The difficulty of changing your mind
D) The need for more effective risk assessment
E) The power of the first number
F) A successful approach to the study of decision-making
G) The danger of trusting a global market
H) Reluctance to go beyond the familiar

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

WHY RISKS CAN GO WRONG

Human intuition is a bad guide to handling risk

I. People make terrible decisions about the future. The evidence is all around, from their investments in the stock markets to the way they run their businesses. In fact, people are consistently bad at dealing with uncertainty, underestimating some kinds of risk and overestimating others. Surely there must be a better way than using intuition?

II. In the 1960s a young American research psychologist, Daniel Kahneman, became interested in people's inability to make logical decisions. That launched him on a career to show just how irrationally people behave in practice. When Kahneman and his colleagues first started work, the idea of applying psychological insights to economics and business decisions was seen as rather bizarre. But in the past decade the fields of behavioural finance and behavioural economics have blossomed, and in 2002 Kahneman shared a Nobel prize in economics for his work. Today he is in demand by business organizations and international banking companies. But, he says, there are plenty of institutions that still fail to understand the roots of their poor decisions. He claims that, far from being random, these mistakes are systematic and predictable.

III. Another source of wrong decisions is related to the decisive effect of the initial meeting, particularly in negotiations over money. This is referred to as the 'anchor effect'. Once a figure has been mentioned, it takes a strange hold over the human mind. The asking price quoted in a house sale, for example, tends to become accepted by all parties as the 'anchor' around which negotiations take place. Much the same goes for salary negotiations or mergers and acquisitions. If nobody has much information to go on, a figure can provide comfort - even though it may lead to a terrible mistake.

IV. In addition, mistakes may arise due to stubbornness. No one likes to abandon a cherished belief, and the earlier a decision has been taken, the harder it is to abandon it. Drug companies must decide early to cancel a failing research project to avoid wasting money, but may find it difficult to admit they have made a mistake. In the same way, analysts may have become wedded early to a single explanation that coloured their perception. A fresh eye always helps.

V. People also tend to put a lot of emphasis on things they have seen and experienced themselves, which may not be the best guide to decision-making. For example, somebody may buy an overvalued share because a relative has made thousands on it, only to get his fingers burned. In finance, too much emphasis on information close at hand helps to explain the tendency by most investors to invest only within the country they live in. Even though they know that diversification is good for their portfolio, a large majority of both Americans and Europeans invest far too heavily in the shares of their home countries. They would be much better off spreading their risks more widely.

VI. More information is helpful in making any decision but, says Kahneman, people spend proportionally too much time on small decisions and not enough on big ones. They need to adjust the balance. During the boom years, some companies put as much effort into planning their office party as into considering strategic mergers.

TEST 7

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) A time when opportunities were limited
B) The reasons why Ferrando's product is needed
C) A no-risk solution
D) Two inventions and some physical details
E) The contrasting views of different generations
F) A disturbing experience
G) The problems with replacing a consumer item
H) Looking back at why water was bottled

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

PLASTIC IS NO LONGER FANTASTIC

I. In 2017, Carlos Ferrando, a Spanish engineer-turned-entrepreneur, saw a piece of art in a museum that profoundly affected him. 'What Lies Under', a photographic composition by Indonesian digital artist Ferdi Rizkiyanto, shows a child crouching by the edge of the ocean and 'lifting up' a wave, to reveal a cluster of assorted plastic waste, from polyethylene bags to water bottles. The artwork, designed to raise public awareness, left Ferrando angry – and fuelled with entrepreneurial ideas.

II. Ferrando runs a Spanish-based design company, Closca, that produces an ingenious foldable bicycle helmet. But he has now also designed a stylish glass water bottle with a stretchy silicone strap and magnetic closure mechanism that means it can be attached to almost anything, from a bike to a bag to a pushchair handle. The product comes with an app that tells people where they can fill their bottles with water for free.

III. The intention is to persuade people to stop buying water in plastic bottles, thus saving consumers money and reducing the plastic waste piling up in our oceans. 'Bottled water is now a $100 billion business, and 81 per cent of the bottles are not recycled. It's a complete waste – water is only 1.5 per cent of the price of the bottle!' Ferrando cries. Indeed, environmentalists estimate that by 2050 there will be more plastic in our oceans than fish and that's mainly down to such bottles. 'We are trying to create a sense that being environmentally sophisticated is a status symbol,' he adds. 'We want people to clip their bottles onto what they are wearing, to show that they are recycling – and to look cool.'

IV. Ferrando's story is fascinating because it seems like an indicator of something unexpected. Three decades ago, conspicuous consumption – the purchase of luxuries, such as handbags, shoes, cars, etc. on a lavish scale – heightened people's social status. Indeed, the closing decades of the 20th century were a time when it seemed that anything could be turned into a commodity. Hence the fact that water became a consumer item, sold in plastic bottles, instead of just emerging, for free, from a tap.

V. Today, though, conspicuous extravagance no longer seems desirable among consumers. Now, recycling is fashionable – as is cycling rather than driving. Plastic water bottles have become so common that they do not command status; instead, what many millennials – young people born in the late 20th century – prefer to post on social media are 'real' (refillable) bottles or even the once widespread Thermos bottles. Some teenagers currently think that these stainless-steel vacuum-insulated water bottles that are coming back onto the market are ultra 'cool'; never mind the fact that they feel oddly out-of-date to anyone over the age of 40 or that teenagers in the 1970s would have avoided ever being seen with one.

VI. It is uncertain whether Clesca will succeed in its goal. Although its foldable bike helmet is available in some outlets in New York, including the Museum of Modern Art, it can be very hard for any design entrepreneur to really take off in the global mass market, though not as hard as it might have been in the past. If an entrepreneur had wanted to fund a smart invention a few decades ago, he or she would have had to either raise a bank loan, borrow money from a family member or use a credit card. Things have moved on slightly since then.

TEST 8

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Plans for more marine protected areas
B) A historical overview of one specific area
C) Why more has not been done to save marine creatures
D) What the press has missed
E) Where biodiversity has been shown to help
F) Who is currently being blamed
G) A reason for some optimism
H) Various factors other than fishing

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

MARINE ECOSYSTEM

I. For some time now, the world's oceans and the people who fish them have been a constant source of bad environmental news: cod is effectively an endangered species of fish in some places now; every year thousands of dolphins are injured by fishing vessels; huge tuna farms are ruining the Mediterranean Sea. What is more, marine biologists recently warned that our seafood is in terminal decline. According to research published in Science last November, stocks of all the fish and shellfish that we currently eat will collapse before 2050. Or at least that's how the media reported it.

II. However, the scientist who led the study has said that the main conclusion of his research has been buried beneath the headlines. While the danger to our seafood supply is real enough, says Boris Worm, assistant professor of marine conservation biology at Dalhousie University, Canada, there is a more serious point: that the way in which we manage the oceans is not only threatening the survival of individual species, it's upsetting the delicate balance of marine communities and thus causing the collapse of entire ecosystems. Research has shown that the number of ecosystems where all higher forms of life are extinct, so-called dead zones, is increasing. The point that many reports failed to highlight, says Worm, is that we have to revolutionise the way our marine resources are run, changing the focus from stocks and quotas to biodiversity and ecosystem protection. And to do that, we must change the way the debate about our marine resources is conducted in the public domain.

III. Around 7,500 years ago, shrinking glaciers and the resulting higher water levels led to the development of what's called the Wadden Sea, a 13,500-square-kilometre area of the North Sea. During the first 5,000 years or so, the sea pulsated with life. There was a high level of biodiversity on the seabed too, and the salt marshes and mud flats on the coast supported millions of birds. This continued until around 2,000 years ago, when human pressure began to affect it. Research has shown that some of the larger creatures disappeared more than 500 years ago. And by the late 19th century, populations of most of the other mammals and fish were severely reduced, leading to the collapse of several traditional fisheries.

IV. What the Science paper has demonstrated, however, is that the decline in the health of ecosystems is greater where the number of different species is low. The population of marbled rock cod around the South Atlantic island of South Georgia, for example, still hasn't recovered after the fishing industry caused its collapse during the 1970s. By contrast, North Sea cod has withstood very heavy fishing for hundreds of years, says Worm, and although it has declined substantially, it hasn't yet collapsed completely. Worm believes that, 'to have a greater number of species makes an ecosystem more robust'. His theory is backed up by evidence from experiments into how ecosystems react to change.

V. And some positive news came from the study. Worm and his colleagues were able to show that it's possible to reverse such damage as long as there are enough species. A survey of 44 protected areas revealed increases in biodiversity and fish catches close to the reserves. Worm says, 'We should be focusing our attention on protecting all of our marine resources at the ecosystem level, and managing levels of fishing, pollution and habitat disturbance to ensure that crucial services that maintain the health of the ecosystem continue to function.' To anyone who knows anything about ecology, it would appear that Worm is just stating the obvious. And many protected areas on land are now managed in this way.

VI. However, there has long been a tendency to view our oceans as a limitless resource, combined with a widespread failure to make an emotional connection with most marine wildlife. True, we have created a small number of marine protected areas. 'We seem to have understood the value of protecting ecosystems in areas such as the Australian Great Barrier Reef that we consider to be particularly beautiful' says John Shepherd, Professor of Marine Sciences at Southampton University in the UK. 'Human nature will always draw us towards those species or habitats that are more aesthetically pleasing. That's why there will always be support for protecting pandas and very little for worms, even though nematodes play a vital role in maintaining the health of an ecosystem.'

TEST 1

Questions 21–29

Read the following text for question 21-29.

PENGUINS

There are seventeen kinds of penguins in the world. They are all alike in some ways and all cannot fly. All have dark backs and white fronts and live in the Southern Hemisphere near the sea.

They differ in several ways. They can be as small as 16 inches or as tall as 4 feet. They differ in the exact location they inhabit. Some live in the frigid climate of Antarctica. Others can live along the coast of forested land. Galapagos penguins live three thousand miles north of Antarctica in a tropical climate at the equator. All penguins live at or south of the equator.

Some penguins are known for yellow or orange feathers on their heads. Some have a single or double black band across their upper chest. Brush-tailed penguins have tails that are longer than any other. The emperor and the king are called the giant penguins. The little blue and the yellow-eyed are isolated types of penguins not related to any other. Sometimes penguins are named by what they look like. Sometimes they are named based on where they live.

Penguins have torpedo-shaped bodies, long and slim. They can move quickly and gracefully through the sea. Their short wings and flippers move up and down swiftly. They steer with their tails and feet. Penguins have solid bones. This helps them dive. They can leap out of the water. They can travel twenty-five miles an hour for short distances. Some types of penguins may live in one area in summer and travel a good distance for the winter. The biggest penguins are the fastest swimmers and best divers. Emperors can dive as much as fifteen hundred feet below the surface of the ocean for prey, though food is much closer to them.

Penguins feed on fish, squid and krill. They have no teeth. Their tongues and roofs of their mouths are covered with stiff spines which keep slippery prey inside. A penguin comes up from below to strike a school of fish. In a few minutes a penguin can catch and eat a hundred small fish or krill.

Wherever penguins swim, the water is cold. Their coat of small, scale-like feathers protects them from the cold. Penguins can groom themselves by taking oil from a gland at the base of their tails. With their beaks they spread this oil all over their feathers. This is their way of waterproofing their bodies. A layer of stored fat under their skin also keeps them warm. It gives them extra energy when needed too. In warmer climates penguins may have bare skin on their faces to stay cooler.

Penguins could live all year in the sea but they must come ashore to mate and raise their babies. Most nests are made by the male. Both parents help raise the babies. In warm climates penguins must protect the eggs from the heat. Nests can be placed in crevices and caves along the shore. Penguins in colder climates build nests on top of soil or rocks out of pebbles. They are above ground to avoid being flooded by melting ice.

In spring more than a million king penguins raise their young on South Georgia Island in the southern part of the Atlantic Ocean. The male and female take turns holding a single egg on top of their feet. They keep it warm by holding it up to a special warm area of their belly skin called the brood patch. The other parent goes off to hunt for food.

In summary, all seventeen types of penguins in the world are alike in some ways. They are all flightless birds. They have dark backs and white fronts and live near the sea in the Southern Hemisphere.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Which of the following are the two largest types of penguins?

A) King and emperor
B) Brush-tailed and emperor
C) Galapagos and king
D) None of the above

22 Which of the following reasons tells why penguins use the oil from the gland at the base of their tail?

A) To protect their eyes from bright light
B) To waterproof their feathers
C) To keep their feet tough
D) To keep their beaks sharp

23 What is unusual about how the male and female emperor penguins on South Georgia Island take care of their egg?

A) They bury it in the sand.
B) The female sits on it for three weeks.
C) The male and female use a brood patch to keep the egg warm.
D) The parents leave the egg alone while they go off to hunt for food.

24 **Penguins live ...**

A) anywhere.
B) Only in the forests of Galapagos.
C) at the equator.
D) in the frigid climate of Antarctica.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **All penguins have black bands across their chests.**

A) True
B) False
C) No Information

26 **Penguins have sharp teeth.**

A) True
B) False
C) No Information

27 **Penguins eat small animals like fish and squid.**

A) True
B) False
C) No Information

28 **Penguins choose their partner for life.**

A) True
B) False
C) No Information

29 **King penguins and emperor penguins dislike each other.**

A) True
B) False
C) No Information

TEST 2

Questions 21–29

Read the following text for question 21-29.

PIRATES

There have always been people who robbed ships in the open sea. We know them as pirates or corsairs. Many of them were sailors who lost their jobs, others were just young men and women looking for adventure. Thousands of pirates were active from 1650–1720. These years are sometimes known as the 'Golden Age' of piracy. Probably the most famous pirates of this period are Blackbeard, Henry Morgan, William 'Captain' Kidd, and the Barbarossa brothers.

The "Jolly Roger" is the well-known pirate flag. There are a number of theories about its origin. It is thought that the first pirates used a red flag, which was common in sea attacks. A red flag told other ships that there would be no pity and no prisoners would be taken. This red flag was called Joli Rouge (pretty red) in French. Most probably, English people pronounced it in their own way "Jolly Roger". Another theory says that "old Roger" was another name for the devil.

Another popular image from the pirate world is a parrot, sitting on the captain's shoulder. Well, there's no historical proof of that. No doubt, pirates often travelled to faraway exotic lands and brought unusual animals as souvenirs with them. Parrots were particularly popular because they were colourful, could be taught to speak, and were easier to care for than, say, monkeys. However, you can't imagine a pirate fighting with a bird on the shoulder. This image possibly began with the book "Treasure Island". In the book, the ever famous Long John Silver carried a parrot as a pet.

Before joining a ship each pirate signed an agreement called "Articles". This explained the rights and laws on board the ship, how much a person was paid, what to do in case of emergency, etc. For example, playing cards for money was not allowed. For breaking the rules a pirate would be shot or left on a desert island with a bottle of water and a gun.

A pirate ship was organized democratically. After a successful attack they divided the treasures equally, only the captain and the cook got more. They sometimes decided together which ship to attack or where to sail next. Most pirates were paid four times more than they had when they were sailors. But on land they were criminals and lots of money was offered to those who caught them.

However, for some time the English government supported pirates. There were lots of pirates in the sixteenth century when England was at war with Spain and the Dutch Republic. Queen Elizabeth I ordered them to rob Spanish ships and bring gold, silver and jewels to the country. Sir Francis Drake was one of the most famous pirates. He brought lots of treasures to England and also was the first Englishman to sail all the way around the world. Because of this, he was made a knight by Queen Elizabeth I.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **"Golden age" of piracy lasted ...**

A) for a century
B) for 70 years
C) until XIX century
D) until James Kidd died

22 **A red flag symbolizes ...**

A) French pirate ships
B) the first pirates that used them
C) no kindness, no prisoners
D) Jolly Roger - the devil

23 **Parrots, according to the author ...**

A) sat on captain's shoulder
B) were nothing more than souvenirs to them
C) were taught to train monkeys
D) has possibly become fashionable after the book - "Treasure Island"

24 **The pirates who decide whom to attack next were ...**

A) criminals
B) boardsmen and captains
C) captains and cooks
D) sailors

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **The flag "Jolly Roger" meant death for ships' sailors and passengers.**
A) True
B) False
C) No information

26 **The name for the flag "Jolly Roger" is of English origin.**
A) True
B) False
C) No information

27 **Parrots brought luck to pirates at sea.**
A) True
B) False
C) No information

28 **In the past pirates did some jobs for the English queens and kings.**
A) True
B) False
C) No information

29 **Francis Drake was the richest English pirate.**
A) True
B) False
C) No information

TEST 3

Questions 21–29

Read the following text for question 21-29.

TWO SPORTS BRANDS

The small town in Bavaria is very famous in Germany, because there is the home of the Dassler brothers. They started two well-known sports brands: Adidas and Puma. But their story is not about peace, it's about war, disagreement and competition.

In 1924 Adolf and Rudolf started making shoes and soon had a small shoe business. The elder brother, Rudolf (or Rudi), was a veteran of World War I. He was a good businessman and knew how to sell things. The younger brother, Adolf (or Adi) was more thoughtful and creative. The brothers had 25 workers at the factory and they made 100 pairs of sports shoes every day.

During the 1936 Olympics, Adi Dassler drove to the Olympic village with a suitcase full of sports shoes. He asked an American sprinter Jesse Owens to wear and run in them. Owens won 4 gold medals and at once the Dassler shoes became popular. The Dasslers were selling 200,000 pairs of shoes each year before World War II.

We don't know much about their lives at the time of World War II. However, in the 1940s they refused to work together any more. Rudolf left the company, moved to the other bank of the river and started a competing shop there. At first he wanted to name his company Ruda, but then he thought about a graceful, quick animal – the puma. And so Puma was born.

Adi stayed with family business and renamed the company Adidas. He developed the 3-stripe logo in 1941 and registered it as Adidas' brand. Adi wanted to make a symbol that could be easily recognized by other people and three stripes was a good idea. The stripes show a mountain. You have to climb it if you want to reach the peak or achieve anything. The serious conflict between the brothers divided the town into two: the Adidas bank and the Puma bank of the river. It was like a silent war. Only the bravest people could wear their Puma shoes and cross the river to the Adidas side of the town. When people met in the street, they first looked down at each other's shoes. It helped them to decide if that person was an enemy or a friend. What's more, Puma people didn't marry Adidas people. There were Adidas and Puma schools, pubs, shops, restaurants and hotels.

The brothers never became friendly again or even spoke to each other. Rudi died in 1974 and left Puma to his son. The family sold the company in 1989. Adi died in 1978, his son was the head of Adidas till his death in 1987. Today Puma is controlled by a big French company and Adidas is owned by a number of companies.

The "war" was declared completely over in 2009. Employees and workers of both companies shook hands and then played a football match in the Bavarian town of Herzogenaurach. The match was the first joint event for the two companies since 1948. The match ended 7–5 but the teams were not divided into Adidas and Puma. Each team was a mix of Adidas and Puma players.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **What was Rudolf good at?**
A) fighting wars
B) businnes
C) shoemaking
D) brandmaking

22 **The Dasslers...**
A) were very popular when they started shoemaking
B) fought both World wars
C) asked an athlete to wear their sport shoes
D) made 100 shoes every day before 1936

23 **According to the text, the puma is ...**
A) a fast creature
B) an international brand name made up by Rudolf
C) symbolized a mountain
D) was the first name came to Rudolf when he started his own business

24 **"War" between the brothers ...**
A) devastated their hometown and brought destruction
B) were finally over by the time they died
C) lasted until the end of 2000s
D) declared over when Adidas team won Puma team (7-5)

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **One of the brothers advertised the first sports shoes with the help of a famous athlete.**
A) True
B) False
C) No information

26 **A trip to the mountain gave Adi the idea for Adidas logo.**
A) True
B) False
C) No information

27 **The people of the town were involved in the brothers' quarrel.**
A) True
B) False
C) No information

28 **Now Adidas and Puma belong to the Dassler family.**
A) True
B) False
C) No information

29 **The results of the football match caused a new outbreak of the war between the Adidas and Puma companies.**
A) True
B) False
C) No information

TEST 4 — Questions 21–29

Read the following text for question 21-29.

CUTTY SARK

Greenwich, a green district of South East London, is famous for two things: for giving its name to the Greenwich Meridian and Greenwich Mean Time and for its maritime history. The National Maritime Museum, telling the history of British ships, is situated there. The famous "tea clipper", a sailing ship from the 1800s named the Cutty Sark, is kept in Greenwich in a dry dock by the river. The ship is open to the public.

The Cutty Sark was built in 1869 in Scotland, for John Willis, a successful London tea merchant. At that time, she was one of the fastest clipper ships ever built. The ship was named after Cutty Sark, the nickname of the witch Nannie Dee in Robert Burns' poem "Tam o' Shanter".

The Cutty Sark was active for only 7 years and made just 8 round-trip voyages to China. Why such a short career as a tea clipper? Unfortunately for John Willis, in 1869 the Suez Canal was opened and steam ships started widely using it. Steam ships could pass through the canal, whereas clipper ships like Cutty Sark could not. That meant that steam ships could cut thousands of miles off the route and reached China much faster. So most tea merchants preferred steam ships to sailing ships.

While the Cutty Sark's career in the tea trade wasn't very successful, her next career in the Australian wool trade was outstanding. From 1883-95 the ship made the Australian run, bringing wool exports back to London. The Cutty Sark dominated the wool trade for more than 10 years, earning a reputation for high speed on the two-month voyage.

But again, the steam ships spoiled the Cutty Sark's career, making the Australian wool trade their own. The Cutty Sark was sold to a Portuguese company. She was renamed Ferreira and from 1895 to 1922 she carried cargo between Portugal and the distant corners of the Portuguese Empire.

In 1922 Ferreira was put into Falmouth to repair damage which she had received in a windstorm. A retired sea captain, Wilfred Dowman, saw the ship and decided to buy her. He restored the Cutty Sark to how she had been during her days as a tea clipper. Then the ship was used for naval training until 1951, when she was sent to London for the Festival of Britain. There, the National Maritime Museum put the ship into dry dock at Greenwich in 1954, beside the Old Royal Naval College. A new step in the Cutty Sark's career began — she was turned into a museum.

Unfortunately, the ship was badly damaged in a fire on 21st May 2007. The following long and expensive restoration lasted until 2012. Nowadays the Cutty Sark is the only remaining original clipper ship from the 1800s. She is a popular London attraction. Visitors are welcome to explore the decks and walk in the footsteps of seamen who sailed the ship between England and China in the 1800s. There are also numerous hands-on exhibits and interactive displays for both children and adults.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **Cutty Sark ...**
A) is situated in London
B) never sailed
C) was the first "tea clipper"
D) was the nickname of Robert Burns

22 **The ship stopped sailing ...**
A) after the Suez Canal opened
B) after she was returned to London for a festival
C) in 1895
D) in 2007

23 **The ship turned into a museum ...**
A) for centuries
B) after it was badly damaged in a fire in 2007
C) when it participated in the Festival of Britain
D) after she returned to London in 20th century.

24 **Nowadays, visitors can ...**
A) see Chinese teas clippers
B) explore Cutty Sark and walk in the footsteps of sailors
C) sail between England and China aboard the ship
D) become seamen themselves and try to understand how to be better

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **The Cutty Sark was named after her owner's wife.**
A) True
B) False
C) No Information

26 **The Cutty Sark's journey time to China was shorter than for steam ships.**
A) True
B) False
C) No Information

27 **The Cutty Sark was the only clipper ship which carried wool from Australia to Great Britain.**
A) True
B) False
C) No Information

28 **The Cutty Sark was used as a trade ship until the beginning of the 21st century.**

A) True
B) False
C) No Information

29 **The Cutty Sark museum is open every day except Christmas.**

A) True
B) False
C) No Information

TEST 5

Questions 21–29

Read the following text for question 21-29.

HALLOWEEN

Halloween dates back to an ancient Celtic festival. The Celts, who lived 2,000 years ago in the area of Ireland, the United Kingdom and northern France, celebrated their new year on 1st November. This day showed that the summer was over and winter had come. Because of the cold and darkness, winter was associated with human death.

Celts believed that on Halloween night the ghosts of the dead returned to earth. With their help, the Druids or Celtic priests, could predict the future. It was important because people depended on the natural world which was dangerous and changeable. They wanted to know what their life would be like in the next year.

For this event the Druids built big bonfires, where the people gathered to burn crops and animals. It was a gift to the Celtic gods. During the celebration, the Celts wore costumes made of animal heads and skins. They sang, danced and listened to the stories the Druids told them. When the celebration was over, they went home and brought burning pieces of wood with them. They lit their fires and hoped it would ensure good fortune and protect the family during the winter.

The first celebrations of Halloween in America were public events. Neighbours got together to celebrate the harvest and tell each other stories of the dead. They also sang and danced. By the middle of the nineteenth century, these autumn festivals were common, but Halloween was not yet celebrated everywhere in the country.

In the second half of the nineteenth century, lots of immigrants started coming to America. They helped to make the celebration of Halloween a popular national event. Americans began to dress up in frightening costumes and go from house to house asking for food or money. The most popular characters were witches, ghosts, and vampires. Everyone tried to look as ugly and scary as possible.

Halloween is closely associated with the Jack-o'-lantern, a pumpkin with a candle inside that shines through the holes to make a horrible face. Most people think that the Jack-o'-lantern is an American tradition. However, the original Jack-o'-lantern was not a pumpkin but a man who, according to the old Irish legend, played a trick on the devil himself. He was punished for that and was accepted neither to heaven nor to hell. The Irish people shared the legend with the Americans and showed them how to make Jack-o'-lantern out of the pumpkin.

By the 1930s, Halloween had been celebrated with parades, town-wide parties and lots of other entertainment. Later a new tendency appeared. By the 1950s, Halloween had changed into a holiday directed mainly at children. On that evening children in costumes travel from house to house in order to ask for treats (such as some sweets, a small present or a few coins) with the question "Trick or treat?" The trick is a threat (usually not working) to perform mischief on the owner of the house if no treat is given. "Trick or treat?" has become a traditional practice on Halloween in many countries.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **Halloween were celebrated 2000 years ago because ...**

A) the Celts presumed that summer would be over soon.
B) of no particular reason as it was very ancient back then.
C) in the UK, France and Ireland, it meant that autumn is over.
D) it was their new year.

22 **On Halloween night it is believed that ...**

A) the ghosts of the future visited the Celts and haunted them
B) the spirits of the dead helped the Druids
C) the gods gave them a piece of wood
D) wore costumes of animals and plants

23 **It is stated in the passage that the first celebrations of the Halloween in America were...**

A) celebrated everywhere by the neighbors.
B) nothing more than entertainment festivals in which they didn't tell stories like the Celts.
C) celebrated with big fires, dances, stories and burning crops.
D) common but wasn't celebrated widely

24 **Adults started to ignore the Halloween festival ...**

A) in 1930s
B) in the XIX century
C) by the 1950s
D) by the middle of the XIX century

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **For the Celts Halloween was associated with the change of the seasons.**

A) True
B) False
C) No Information

26 **The Celts paid the priests for their predictions.**

A) True
B) False
C) No Information

27 **In ancient times fires were prohibited on Halloween night.**

A) True
B) False
C) No Information

28 **The Irish immigrants taught Americans how to use pumpkins for Halloween ceremonies.**

A) True
B) False
C) No Information

29 **From the middle of the 20th century, children have taken an active part in Halloween celebrations.**

A) True
B) False
C) No Information

TEST 6

Questions 21–29

Read the following text for question 21-29.

Since the theory of UG was proposed, linguists have identified many universal language rules. However, there are almost always exceptions. It was once believed, for example, that if a language had syllables that begin with a vowel and end with a consonant (VC), it would also have syllables that begin with a consonant and end with a vowel (CV). This universal lasted until 1999, when linguists showed that Arrernte, spoken by Indigenous Australians from the area around Alice Springs in the Northern Territory, has VC syllables but no CV syllables.

Other non-universal universals describe the basic rules of putting words together. Take the rule that every language contains four basic word classes: nouns, verbs, adjectives and adverbs. Work in the past two decades has shown that several languages lack an open adverb class, which means that new adverbs cannot be readily formed, unlike in English where you can turn any adjective into an adverb, for example 'soft' into 'softly'. Others, such as Lao, spoken in Laos, have no adjectives at all. More controversially, some linguists argue that a few languages, such as Straits Salish, spoken by indigenous people from north-western regions of North America, do not even have distinct nouns or verbs. Instead, they have a single class of words to include events, objects and qualities.

Even apparently indisputable universals have been found lacking. This includes recursion, or the ability to infinitely place one grammatical unit inside a similar unit, such as 'Jack thinks that Mary thinks that ... the bus will be on time'. It is widely considered to be the most essential characteristic of human language, one that sets it apart from the communications of all other animals. Yet Dan Everett at Illinois State University recently published controversial work showing that Amazonian Piraha does not have this quality.

But what if the very diversity of languages is the key to understanding human communication? Linguists Nicholas Evans of the Australian National University in Canberra, and Stephen Levinson of the Max Planck Institute for Psycholinguistics in Nijmegen, the Netherlands, believe that languages do not share a common set of rules. Instead, they say, their sheer variety is a defining feature of human communication - something not seen in other animals. While there is no doubt that human thinking influences the form that language takes, if Evans and Levinson are correct, language in turn shapes our brains. This suggests that humans are more diverse than we thought, with our brains having differences depending on the language environment in which we grew up. And that leads to a disturbing conclusion: every time a language becomes extinct, humanity loses an important piece of diversity.

If languages do not obey a single set of shared rules, then how are they created? 'Instead of universals. you get standard engineering solutions that languages adopt again and again, and then you get outliers.' says Evans. He and Levinson argue that this is because any given language is a complex system shaped by many factors, including culture, genetics and history. There- are no absolutely universal traits of language, they say, only tendencies. And it is a mix of strong and weak tendencies that characterises the 'bio-cultural' mix that we call language.

According to the two linguists, the strong tendencies explain why many languages display common patterns. A variety of factors tend to push language in a similar direction, such as the structure of the brain, the biology of speech, and the efficiencies of communication. Widely shared linguistic elements may also be ones that build on a particularly human kind of reasoning. For example, the fact that before we learn to speak we perceive the world as a place full of things causing actions (agents) and things having actions done to them (patients) explains why most languages deploy these grammatical categories.

Weak tendencies, in contrast, are explained by the idiosyncrasies of different languages. Evans and Levinson argue that many aspects of the particular natural history of a population may affect its language. For instance, Andy Butcher at Flinders University in Adelaide, South Australia, has observed that indigenous Australian children have by far the highest incidence of chronic middle-ear infection of any population on the planet, and that most indigenous Australian languages lack many sounds that are common in other languages, but which are hard to hear with a middle-ear infection. Whether this condition has shaped the sound systems of these languages is unknown, says Evans, but it is important to consider the idea.

Levinson and Evans are not the first to question the theory of universal grammar, but no one has summarised these ideas quite as persuasively, and given them as much reach. As a result, their arguments have generated widespread enthusiasm, particularly among those linguists who are tired of trying to squeeze their findings into the straitjacket of 'absolute universals'. To some, it is the final nail in UG's coffin.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Which of the following views about language are held by Evans and Levinson?

A) Each of the world's languages develops independently.
B) The differences between languages outweigh the similarities.
C) Only a few language features are universal.
D) Each language is influenced by the characteristics of other languages.

22 According to Evans and Levinson, apparent similarities between languages could be due to

A) close social contact.
B) faulty analysis.
C) shared modes of perception.
D) narrow descriptive systems.

23 In the seventh paragraph, what does the reference to a middle-ear infection serve as?

A) A justification for something.
B) A contrast with something.
C) The possible cause of something.
D) The likely result of something.

24 What does the writer suggest about Evans' and Levinson's theory of language development?

A) It had not been previously considered.
B) It is presented in a convincing way.
C) It has been largely rejected by other linguists.
D) It is not supported by the evidence.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The majority of UG rules proposed by linguists do apply to all human languages.

A) True
B) False
C) No Information

26 There is disagreement amongst linguists about an aspect of Straits Salish grammar.

A) True
B) False
C) No Information

27 The search for new universal language rules has largely ended.

A) True
B) False
C) No Information

28 If Evans and Levinson are right, people develop in the same way no matter what language they speak.

A) True
B) False
C) No Information

29 The loss of any single language might have implications for the human race.

A) True
B) False
C) No Information

Read the following text for question 21-29.

THE POWER OF NOTHING

Geoff Watts, New Scientist (May 26th, 2001)

Placebos are treatments that have no direct effect on the body, yet still, work because the patient has faith in their power to heal. Most often the term refers to a dummy pill, but it applies just as much to any device or procedure, from a sticking plaster to a crystal to an operation. The existence of the placebo effect implies that even quackery may confer real benefits, which is why any mention of placebo is a touchy subject for many practitioners of complementary and alternative medicine, who are likely to regard it as tantamount to a charge of charlatanism. In fact, the placebo effect is a powerful part of all medical care, orthodox or otherwise, though its role is often neglected or misunderstood.

One of the great strengths of CAM may be its practitioners' skill in deploying the placebo effect to accomplish real healing. "Complementary practitioners are miles better at producing non-specific effects and good therapeutic relationships," says Edzard Ernst, professor of CAM at Exeter University. The question is whether CAM could be integrated into conventional medicines, as some would like, without losing much of this power.

At one level, it should come as no surprise that our state of mind can influence our physiology: anger opens the superficial blood vessels of the face; sadness pumps the tear glands. But exactly how placebos work their medical magic is still largely unknown. Most of the scant research done so far has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, morphine-like neurochemicals known to help control pain. But exactly how placebos work their medical magic is still largely unknown. Most of the scant research to date has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, natural counterparts of morphine that are known to help control pain. "Any of the neurochemicals involved in transmitting pain impulses or modulating them might also be involved in generating the placebo response," says Don Price, an oral surgeon at the University of Florida who studies the placebo effect in dental pain. "But endorphins are still out in front." That case has been strengthened by the recent work of Fabrizio Benedetti of the University of Turin, who showed that the placebo effect can be abolished by a drug, naloxone, which blocks the effects of endorphins. Benedetti induced pain in human volunteers by inflating a blood-pressure cuff on the forearm. He did this several times a day for several days, using morphine each time to control the pain. On the final day, without saying anything, he replaced the morphine with a saline solution. This still relieved the subjects' pain: a placebo effect. But when he added naloxone to the saline the pain relief disappeared. Here was direct proof that placebo analgesia is mediated, at least in part, by these natural opiates.

Still, no one knows how belief triggers endorphin release, or why most people can't achieve placebo pain relief simply by willing it. Though scientists don't know exactly how placebos work, they have accumulated a fair bit of knowledge about how to trigger the effect. A London rheumatologist found, for example, that red dummy capsules made more effective painkillers than blue, green or yellow ones. Research on American students revealed that blue pills make better sedatives than pink, a colour more suitable for stimulants. Even branding can make a difference: if Aspro or Tylenol is what you like to take for a headache, their chemically identical generic equivalents may be less effective. It matters, too, how the treatment is delivered. Decades ago, when the major tranquilliser chlorpromazine was being introduced, a doctor in Kansas categorised his colleagues according to whether they were keen on it, openly skeptical of its benefits, or took a "let's try and see" attitude. His conclusion: the more enthusiastic the doctor, the better the drug performed. And this year Ernst surveyed published studies that compared doctors' bedside manners. The studies turned up one consistent finding: "Physicians who adopt a warm, friendly and reassuring manner," he reported, "are more effective than those whose consultations are formal and do not offer reassurance."

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **Placebos work because ...**
A) it has an effect on the body
B) it grows patient's faith
C) it enhaces the power to heal
D) people believe on their effect

22 **According to the passage, what have most studies on placebos focused on?**
A) The role of endorphins in pain control
B) The effectiveness of placebos in treating various diseases
C) The psychological mechanisms behind the placebo effect
D) The potential integration of placebos into conventional medicine

23 **The placebo effect, despite it's neglected status ...**
A) doesn't work
B) is very scientific in nature
C) is a big part of medical care
D) has too much power

24 **Endorphins ...**
A) can help to overcome pain
B) makes blood vessels superficial
C) is a chamical hazard
D) is very distinct from morphine

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **The placebo effect only works for controlling pain.**
A) True
B) False
C) No information

26 **Endorphins are believed to play a role in the placebo effect.**
A) True
B) False
C) No information

27 **Naloxone, a drug that blocks endorphins, can eliminate the placebo effect for pain relief.**
A) True
B) False
C) No information

28 **Scientists fully understand how placebos trigger the release of endorphins.**
A) True
B) False
C) No information

29 **The color, branding, and delivery of placebo treatments can influence their effectiveness.**
A) True
B) False
C) No information

TEST 8

Questions 21–29

Read the following text for question 21-29.

THE ROLE OF THE SWISS POSTBUS

The Swiss PostBus Limited is the largest of the country's 78 coach companies. Administered by the Motor Services Department of the Post Office, it carries over 120 million passengers each year and is carefully integrated with other public transport services: trains, boats and mountain cableways. The Swiss transportation system resembles a tree, with the larger branches representing federal and private railways, the smaller branches being the coaches, and the twigs being the urban transit operators running trams, city buses, boats, chairlifts and so on. But the trunk that holds the tree together is the vast postbus network, without which the whole network would not function.

There isn't an inhabited place in Switzerland that cannot be reached by some sort of public transport. Federal law and the Swiss Constitution stipulate that every village with a population greater than 40 is entitled to regular bus services. The frequency of these services is directly related to population density. Timetables are put together four years in advance, and seldom change. If a new route is to be introduced, the population of the area affected is invited to vote in a referendum.

At times, postbuses are the main — sometimes the only — links between settlements. These coaches, often with a trailer in tow to increase their capacity, are a common sight in high-altitude regions, and their signature sound — part of Rossini's William Tell Overturn, played by the drivers on three-tone post horns with electrical compressors at every road turn — is one of the most familiar Swiss sounds.

The three-tone horns can still be used to 'talk' to post offices (and each other) from a distance. By altering the combination of the tones, a driver can announce 'departure of post1, 'arrival of post', 'arrival of special post', and so on – so much more romantic and often more reliable than radio or mobile phones. This musical 'language' started in the mid-nineteenth century, when the coach drivers could also blow their horns a certain number of times on approaching the station to indicate the number of horses needing to be fed, giving the stationmaster time to prepare the fodder.

The postbus history goes back to 1849, when the Swiss postal service was made a monopoly. The role of today's modern yellow buses was, back then, played by horse-drawn carriages (or in winter by sleighs, in order to travel on snow), which were the same colour. By 1914, eight years after the first motor coaches were introduced, there were still 2,500 horses, 2,231 coaches (or carriages) and 1,059 sleighs in service.

After the First World War, Swiss Post bought a fleet of decommissioned military trucks which were converted into postbuses, but it was not until 1961 that the last horse-drawn coach was replaced with a motorised version.

Today, the Swiss Post Office boasts one of the world's most advanced coach fleets, including fuel-cell models and the world's first driverless bus. This was launched in 2015 in the town of Sion, the capital of the canton of Valais, one of the 26 cantons, or administrative regions, that make up the country.

Postbuses often go to places that other means of transport cannot reach. Most of the drivers therefore see themselves as educators and tour guides. Although it's not in their job description, they're likely to point out the sights — waterfalls, gorges, and so on — and are always ready to pull over for a photo opportunity.

Switzerland's longest postbus journey, and one of the highest, crosses four mountain passes – an eight-hour trip undertaken by a single postbus. The route goes through several cantons; two languages (German and Italian); all four seasons – from burning sunshine to showers and heavy snowfalls; and countless places of interest, One of the passes, the Gotthard, is often described as 'the People's Road', probably because it connects the German-speaking canton of Uri with Italian-speaking Ticino. Like Switzerland itself, postbuses 'speak' all four state languages: German, French, Italian and Romansh – and by law, their automated intercom announcements are given in the language of whichever canton the bus is currently passing through.

Irrespective of their previous driving experience, drivers undergo lots of training. During the first year, they have, to drive postbuses under the supervision of a more experienced driver. Only after two years of safe driving in the valleys can they be pronounced ready for a mountain bus.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 When comparing the Swiss transportation system to a tree, the writer emphasises

A) the size of the postbus system.
B) how competitive the postbus system is.
C) how important the postbus system is.
D) the threat to the postbus system.

22 According to the fourth paragraph, what were three-tone horns first used to indicate?

A) how many coach horses required food
B) how long the bus would stay at the station
C) how many passengers wanted a meal
D) how soon the bus would arrive at the station

23 What point does the writer make about the postbus drivers?

A) Many choose to give passengers information about the surroundings.
B) Most are proud of driving buses to places without other forms of transport.
C) They are required to inform passengers about the sights seen from the bus.
D) They are not allowed to stop for passengers to take photographs.

24 What is said about the buses' automated announcements?

A) They are given in the language of the bus's starting point.
B) The language they are given in depends on where the bus is at the time.
C) They are always given in all the four languages of Switzerland.
D) The language they are given in depends on the bus's destination.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Some postbuses after the First World War were originally army vehicles.

A) True
B) False
C) No Information

26 The number of driverless buses has increased steadily since 2015.

A) True
B) False
C) No Information

27 On the longest postbus route in Switzerland, passengers have to change buses.

A) True
B) False
C) No Information

28 The weather on the longest postbus route is likely to include extreme weather conditions.

A) True
B) False
C) No Information

29 There is a widely used nickname for part of the longest route used by postbuses.

A) True
B) False
C) No Information

💡 How to do Part 5

- Read the summary first to understand what's missing.
- Find the matching part of the text and copy the word exactly.
- Check the word limit for each answer.

TEST 1

Questions 30–35

Read the following text for questions 30-35.

Australia's flying foxes are 'curious, gentle and intelligent' – and often misunderstood

Endangered spectacled flying foxes and vulnerable grey-headed flying foxes are 'astonishing' animals but misinformation is rife.

One of the most spectacular sights at Adelaide's Womadelaide music festival is not on the official lineup. As dusk approaches, thousands of grey-headed flying foxes begin chattering and stretching their wings as they prepare to ascend from their roosts in Botanic Park and set out in search of food. "It's an amazing sight," says associate professor Wayne Boardman, a wildlife veterinarian and flying fox researcher at the University of Adelaide.

At first a few early birds take to the skies, he says, then more and more, "diving, swooping, flapping". "As the night sky darkens, steadily the full camp take to the air – a mass of circling, squawking bats all eager to start foraging after a day of rest."

For many festivalgoers, the nightly fly-out ritual is their first time seeing the animals, also called megabats, up close. Boardman runs a "bat tent" near one of the main stages, kitted out with displays, videos and binoculars to educate visitors and address misconceptions about the flying foxes. "They are just astonishing animals," he says. "The loveliness of flying foxes, their sheer beauty, astonishing biology, the amazing anatomy – it never ceases to amaze me." Yet misinformation about the animals is rife, from well-meaning parents telling children they use sound waves to navigate (they don't), to more sinister notions including that the animals are "pests" that "don't belong here". "They came of their own volition," Boardman says. Grey-headed flying foxes first arrived in Adelaide in 2010, establishing a permanent camp on First Creek, in parklands just north of the CBD, where they have increased in number from 1,000 to about 50,000 today.

Flying foxes are nomadic, capable of travelling up to 50km at night in search of food resources such as flowering gums, figs and fruit trees. Tim Pearson, a wildlife ecologist who specialises in flying fox behaviour and communication, says the "double whammy" of destroying native forests while providing alternative food sources in farms and residential areas creates the potential for human-bat conflict and harassment, identified as a threat in recovery plans for endangered spectacled flying foxes and vulnerable grey-headed flying foxes. Populations of both species have declined in recent decades, although assessing their current status has become more challenging since the national flying fox monitoring program concluded in 2022. "The Australian attitude towards wildlife has always been positive, providing it doesn't inconvenience you," Pearson says.

Unfortunately for flying foxes, in their case it often does.

Things have been getting better, Pearson says, but flare-ups still occur when practical concerns – about noise, the animals' impact on fruit growers, power outages or potential disease threats – are reported in breathless terms by the media. Efforts to disperse the bats are generally counterproductive and attempts to promote empathy and coexistence have not worked. Scientists now think "normalising" flying foxes might be a way forward, depicting them as a natural part of Australian wildlife in art, photography, books, community events and education. Despite their often visible and audible presence in cities and towns, representations of flying foxes in mainstream media and popular culture remain scarce and largely negative, according to the paper published in Australian Zoologist. Pearson, a co-author of the paper, works with tame education flying foxes at a wildlife park. Once people see these cute, furry animals up close, they realise they are "curious, gentle, intelligent" with individual personalities, he says.

Doug Gimesy, a wildlife and conservation photojournalist, says bats – flying foxes and microbats – make up nearly 20% of all mammals, but "don't get 20% of the air time". "As a group, they're often ignored, under-appreciated and misunderstood," he says. "At worst they're vilified and face a constant battle of disinformation, hate speech and are even persecuted." Gimesy began photographing flying foxes in 2016 and has since spent more than 160 days in the field, taking thousands of images that document every aspect of their lives. Through his award-winning photographs and children's book, Life Upside Down, Gimesy is hoping to show people how magnificent the animals are, "to get people to engage and ask questions and understand". Two images have been important to capture and share, he says. In one, a flying fox pokes its pink tongue into a eucalyptus blossom – because people don't realise what important pollinators they are, he says.

In the other, a pup clings to its mum as it breastfeeds in mid-flight, which usually triggers an emotional response. It's the realization "they carry their young in flight, and they're flying mammals". The paper says shifting attitudes towards species such as sharks and crocodiles, once subject to widespread persecution, offer optimism that contentious issues between flying foxes and people can be managed without maligning them as a species. In Fisher reserve, in the inner Melbourne suburb of North Fitzroy, children play on the green grass as an oversized flying fox takes wing with a magpie, a squirrel glider and pink paper planes against a purple sky. The colourful mural, by Alex Sugar, is one of several depicting flying foxes alongside other Australian wildlife and quirky elements. Sugar is fond of the bats, and they became a recurrent feature in his work after their nightly flyout over the Yarra River drew his attention. "We need to highlight them more in everyday culture and the issues that they're going through as well with their current habitat," he says.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

FLYING FOXES

Flying foxes live by moving from place to place. Their diet usually consists of **30**_____, flowering gums and some other fruits. They have two **31**_____, both of which are endangered. Scientists regard that portraying them as a part of local life them might be useful. They use the term **32**_____ to emphasize it. Although they are indeed encountered in ordinary life, people pay little attention to them, and even when they do, people see them as **33**_____.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **According to the passage, once people get to know flying foxes closer ...**

A) they start to believe that they don't belong in Australia.
B) they become terrified by the sight of them.
C) they started to become guilty by the fact that they themselves destroyed the species' natural habitat.
D) they start to think that flying foxes are smarter than they thought.

35 **According to the passage, the flying foxes ...**

A) takes care of their offspring even when they are flying.
B) eat a lot of fruits and pests like mice and rats.
C) are a favorite among the Australian children.
D) are seldom photographed as they fly too fast.

TEST 2 **Questions 30–35**

Read the following text for questions 30-35.

IS GRAFFITI ART OR CRIME?

The term graffiti derives from the Italian graffito meaning 'scratching' and can be defined as uninvited marking or writing scratched or applied to objects, built structures and natural features. It is not a new phenomenon: examples can be found on ancient structures around the world, in some cases predating the Greeks and Romans. In such circumstances it has acquired invaluable historical and archaeological significance, providing a social history of life and events at that time. Graffiti is now a problem that has become pervasive, as a result of the availability of cheap and quick means of mark-making.

It is usually considered a priority to remove graffiti as quickly as possible after it appears. This is for several reasons. The first is to prevent 'copy-cat' emulation which can occur rapidly once a clean surface is defaced. It may also be of a racist or otherwise offensive nature and many companies and councils have a policy of removing this type of graffiti within an hour or two of it being reported. Also, as paints, glues and inks dry out over time they can become increasingly difficult to remove and are usually best dealt with as soon as possible after the incident. Graffiti can also lead to move serious forms of vandalism and, ultimately, the deterioration of an area, contributing to social decline.

Although graffiti may be regarded as an eyesore, any proposal to remove it from sensitive historic surfaces should be carefully considered: techniques designed for more robust or utilitarian surfaces may result in considerable damage. In the event of graffiti incidents, it is important that the owners of buildings or other structures and their consultants are aware of the approach they should take in dealing with the problem. The police should be informed as there may be other related attacks occurring locally. An incidence pattern can identify possible culprits, as can stylised signatures or nicknames, known as 'tags', which may already be familiar to local police. Photographs are useful to record graffiti incidents and may assist the police in bringing a prosecution. Such images are also required for insurance claims and can be helpful in cleaning operatives, allowing them to see the problem area before arriving on site.

There are a variety of methods that are used to remove graffiti. Broadly these divide between chemical and mechanical systems. Chemical preparations are based on dissolving the media; these solvents can range from water to potentially hazardous chemical 'cocktails'. Mechanical systems such as wire-brushing and grit-blasting attempt to abrade or chip the media from the surface. Care should be taken to comply with health and safety legislation with regard to the protection of both passers-by and any person carrying out the cleaning. Operatives should follow product guidelines in terms of application and removal, and wear the appropriate protective equipment. Measures must be taken to ensure that run-off, aerial mists, drips and splashes do not threaten unprotected members of the public. When examining a graffiti incident it is important to assess the ability of the substrate to withstand the prescribed treatment. If there is any doubt regarding this, then small trial areas should be undertaken to assess the impact of more extensive treatment.

A variety of preventive strategies can be adopted to combat a recurring problem of graffiti at a given site. As no two sites are the same, no one set of protection measures will be suitable for all situations. Each site must be looked at individually. Surveillance systems such as closed-circuit television may also help. In cities and towns around the country, prominently placed cameras have been shown to reduce anti-social behavior of all types including graffiti. Security patrols will also act as a deterrent to prevent recurring attacks. However, the cost of this may be too high for most situations. A physical barriers such as a wall, railings, doors or gates can be introduced to discourage unauthorized access to a vulnerable site. However, consideration has to be given to the impact measures have on the structure being protected. In the worst cases, they can be almost as damaging to the quality of the environment as the graffiti they prevent. In others, they might simply provide a new surface for graffiti.

One of the most significant problems associated with graffiti removal is the need to remove it from surfaces that are repeatedly attacked. Under these circumstances, the repeated removal of graffiti using even the most gentle methods will ultimately cause damage to the surface material. There may be situations where the preventive strategies mentioned above do not work or are not a viable proposition at a given site. Anti-graffiti coatings are usually applied by brush or spray leaving a thin veneer that essentially serves to isolate the graffiti from the surface.

Removal of graffiti from a surface that has been treated in this way is much easier, usually using low-pressure water which reduces the possibility of damage. Depending on the type of barrier selected it may be necessary to reapply the coating after each graffiti removal exercise.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Ancient graffiti is of significance and records the **(30)** _____ history of details life for that period. The police can recognize newly committed incidents of graffiti by the signature which is called **(31)**_____ that they are familiar with. Operatives ought to comply with relevant rules during the operation, and put on the suitable protective **(32)**_____. Removal of graffiti from a new type of coating surface can be much convenient of using **(33)**_____.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which statement is true concerning the removal of graffiti?

A) cocktail removal can be safer than water treatment
B) small patch trial before applying large scale of removing
C) Chemical treatments are the most expensive way of removing
D) mechanical removals are much more applicable than Chemical treatments.

35 Which of the following preventive measures against graffiti are mentioned effectively in the passage?

A) organise more anti-graffiti movement in the city communities
B) Build a new building with material repelling to water
C) installing more visible security cameras
D) Provide a whole new surface with a chemical coat

TEST 3 — Questions 30–35

Read the following text for questions 30-35.

It's not difficult for a person to encounter sound at levels that can cause adverse health effects. During a single day, people living in a typical urban environment can experience a wide range of sounds in many locations, even once-quiet locales have become polluted with noise. In fact, it's difficult today to escape sound completely. In its 1999 Guidelines for Community Noise, the World Health Organization (WHO) declared, "Worldwide, noise-induced hearing impairment is the most prevalent irreversible occupational hazard, and it is estimated that 120 million people worldwide have disabling hearing difficulties." Growing evidence also points to many other health effects of too much volume.

Mark Stephenson, a Cincinnati, Ohio-based senior research audiologist at the National Institute for Occupational Safety and Health (NIOSH), says his agency's definition of hazardous noise is sound that exceeds the time-weighted average of 85 dBA, meaning the average noise exposure measured over a typical eight-hour workday. Other measures and definitions are used for other purposes.

In the United States, about 30 million workers are exposed to hazardous sound levels on the job, according to NIOSH. Industries having a high number of workers exposed to loud sounds include construction, agriculture, mining, manufacturing, utilities, transportation, and the military.

Noise in U.S. industry is an extremely difficult problem to monitor, acknowledges Craig Moulton, a senior industrial hygienist for the Occupational Safety and Health Administration (OSHA). "Still," he says, "OSHA does require that any employer with workers overexposed to noise provide protection for those employees against the harmful effects of noise. Additionally, employers must implement a continuing, effective hearing conservation program as outlined in OSHA's Noise Standard."

Numerous scientific studies over the years have confirmed that exposure to certain levels of sound can damage hearing. Prolonged exposure can actually change the structure of the hair cells in the inner ear, resulting in hearing loss. It can also cause tinnitus, a ringing, roaring, buzzing, or clicking on the ears.

NIOSH studies from the mid to late 1990s show that 90% of coal miners have hearing impairment by age 52 – compared to 9% of the general population – and 70% of male metal/nonmetal miners will experience hearing impairment by age 60 (Stephenson notes that from adolescence onward, females tend to have better hearing than males). Neitzel says nearly half of all construction workers have some degree of hearing loss. "NIOSH research also reveals that by age twenty-five, the average carpenter's hearing is equivalent to an otherwise healthy fifty-year-old male who hasn't been exposed to noise," he says.

William Luxford, medical director of the House Ear Clinic of St. Vincent Medical Center in Los Angeles, points out one piece of good news: "It's true that continuous noise exposure will lead to the continuation of hearing loss, but as soon as the exposure is stopped, the hearing loss stops. So a change in environment can improve a person's hearing health." Research is catching up with this anecdotal evidence. In the July 2001 issue of Pediatrics, researchers from the Centers for Disease Control and Prevention reported that, based on audiometric testing of 5,249 children as part of the Third National Health and Nutrition, Examination Survey, an estimated 12.5% of American children have noise-induced hearing threshold shifts – or dulled hearing – in one or both ears. Most children with noise-induced hearing threshold shifts have only limited hearing damage, but continued exposure to excessive noise can lead to difficulties with high-frequency sound discrimination. The report listed stereos, music concerts, toys (such as toy telephones and certain rattles), lawnmowers, and fireworks as producing potentially harmful sounds.

The effects of sound don't stop with the ears. Nonauditory effects of noise exposure are those effects that don't cause hearing loss but still can be measured, such as elevated blood pressure, loss of sleep, increased heart rate, cardiovascular constriction, labored breathing, and changes in brain chemistry.

The nonauditory effects of noise were noted as early as 1930 in a study published by E.L. Smith and D.L. Laird in volume 2 of the Journal of the Acoustical Society of America. The results showed that exposure to noise caused stomach contractions in healthy human beings. Reports on noise's nonauditory effects published since that pioneering study have been both contradictory and controversial in some areas.

Bronzaft and the school principal persuaded the school board to have acoustical tile installed in the classrooms adjacent to the tracks. The Transit Authority also treated the tracks near the school to make them less noisy. A follow-up study published in the September 1981 issue of the Journal of Environmental Psychology found that children's reading scores improved after these interventions were put in place.

Anti-noise activists say that Europe and several countries in Asia are more advanced than the United States in terms of combating noise. "Population pressure has prompted Europe to move more quickly on the noise issue that the United States has," Hume says. In the European Union, countries with cities of at least 250,000 people are creating noise maps of those cities to help leaders determine noise pollution policies. Paris has already prepared its first noise maps. The map data, which must be finished by 2007, will be fed into computer models that will help test the sound impact of street designs or new buildings before construction begins.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Scientific studies over the years from the mid to late 1990s have confirmed that exposure to certain levels of sound can cause damage **(30)**_____ on certain senior age. From the testing of 5,249 children, those who are constantly exposed to excessive noise may have trouble in high **(31)**_____ sound discrimination. The effects of sound don't stop with the ears, exposure to noise may lead to the unease of **(32)**_____ in healthy people. Europe has taken steps on the noise issue, big cities of over 250,000 people are creating **(33)**_____ map to help to create noise pollution policies.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 In European countries, the big cities' research on noise focuses on

A) how to record pollution details of the city on maps
B) the impact of noise on population shift in the European cities
C) how wide can a city be to avoid noise pollution
D) helping the authorities better make a decision on management of the city

35 What is the best title in paragraph 1?

A) How people cope with noise pollutions
B) the fight against the noise with the powerful technology
C) The Effects of Living in a Noisy World
D) The Effects of noise on children's learning

TEST 4

Questions 30–35

Read the following text for questions 30-35.

COMMUNICATION IN SCIENCE

Science plays an increasingly significant role in people's lives, making the faithful communication of scientific developments more important than ever. Yet such communication is fraught with challenges that can easily distort discussions, leading to unnecessary confusion and misunderstandings.

Some problems stem from the esoteric nature of current research and the associated difficulty of finding sufficiently faithful terminology. Abstraction and complexity are not signs that a given scientific direction is wrong, as some commentators have suggested, but are instead a tribute to the success of human ingenuity in meeting the increasingly complex challenges that nature presents. They can, however, make communication more difficult. But many of the biggest challenges for science reporting arise because in areas of evolving research, scientists themselves often only partly understand the full implications of any particular advance or development. Since that dynamic applies to most of the scientific developments that directly affect people's lives global warming, cancer research, diet studies – learning how to overcome it is critical to spurring a more informed scientific debate among the broader public.

Ambiguous word choices are the source of some misunderstandings. Scientists often employ colloquial terminology, which they then assign a specific meaning that is impossible to fathom without proper training. The term "relativity," for example, is intrinsically misleading. Many interpret the theory to mean that everything is relative and there are no absolutes. Yet although the measurements any observer makes depend on his coordinates and reference frame, the physical phenomena he measures have an invariant description that transcends that observer's particular coordinates. Einstein's theory of relativity is really about finding an invariant description of physical phenomena. True, Einstein agreed with the idea that his theory would have been better named "Invarianten theorie." But the term "relativity" was already entrenched at the time for him to change.

"The uncertainty principle" is another frequently abused term. It is sometimes interpreted as a limitation on observers and their ability to make measurements. But it is not about intrinsic limitations on any one particular measurement; it is about the inability to precisely measure particular pairs of quantities simultaneously? The first interpretation is perhaps more engaging from a philosophical or political perspective. It's just not what the science is about.

Even the word "theory" can be a problem. Unlike most people, who use the word to describe a passing conjecture that they often regard as suspect, physicists have very specific ideas in mind when they talk about theories. For physicists, theories entail a definite physical framework embodied in a set of fundamental assumptions about the world that lead to a specific set of equations and predictions – ones that are borne out by successful predictions. Theories aren't necessarily shown to be correct or complete immediately. Even Einstein took the better part of a decade to develop the correct version of his theory of general relativity. But eventually both the ideas and the measurements settle down and theories are either proven correct, abandoned or absorbed into other, more encompassing theories.

"Global warming" is another example of problematic terminology. Climatologists predict more drastic fluctuations in temperature and rainfall – not necessarily that every place will be warmer. The name sometimes subverts the debate, since it lets people argue that their winter was worse, so how could there be global warming? Clearly "global climate change" would have been a better name. But not all problems stem solely from poor word choices. Some stem from the intrinsically complex nature of much of modern science. Science sometimes transcends this limitation: remarkably, chemists were able to detail the precise chemical processes involved in the destruction of the ozone layer, making the evidence that chlorofluorocarbon gases (Freon, for example) were destroying the ozone layer indisputable.

A better understanding of the mathematical significance of results and less insistence on a simple story would help to clarify many scientific discussions. For several months, Harvard was tortured by empty debates over the relative intrinsic scientific abilities of men and women. One of the more amusing aspects of the discussion was that those who believed in the differences and those who didn't use the same evidence about gender-specific special ability? How could that be? The answer is that the data shows no substantial effects. Social factors might account for these tiny differences, which in any case have an unclear connection to scientific ability. Not much of a headline when phrased that way, is it? Each type of science has its own source of complexity and potential for miscommunication. Yet there are steps we can take to improve public understanding in all cases. The first would be to inculcate greater understanding and acceptance of indirect scientific evidence. The information from an unmanned space mission is no less legitimate than the information from one in which people are on board.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Science Communication is fraught with challenges that can easily distort discussions, leading to unnecessary confusion and misunderstandings. Firstly, Ambiguous word **(30)** _____ are the source of some misunderstandings. Common people without proper training do not understand clearly or deeply a specific scientific meaning via the **(31)** _____ terminology scientists often employed. Besides, the measurements any **(32)** _____ makes can not be confined to describe in a(n) constant **(33)** _____ description yet the phenomenon can be. What's more, even the word "theory" can be a problem.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 What is the reason that the author believes for the biggest challenges for science reporting

A) phenomenon such as global warming, cancer research, diet studies is too complex.
B) Scientists themselves often only partly understand the Theory of Evolution
C) Scientists do not totally comprehend the meaning of certain scientific evolution
D) Scientists themselves often partly understand the esoteric communication nature

35 According to the 3rd paragraph, the reference to the term and example of "theory of relativity" is to demonstrate

A) theory of relativity is about an invariant physical phenomenon
B) common people may be misled by the inaccurate choice of scientific phrase
C) the term "relativity," is designed to be misleading public
D) everything is relative and there is no absolutes existence

Read the following text for questions 30-35.

BIODIVERSITY

It seems biodiversity has become a buzzword beloved of politicians, conservationists, protesters and scientists alike. But what exactly is it? The Convention on Biological Diversity, an international agreement to conserve and share the planet's biological riches, provides a good working definition: biodiversity comprises every form of life, from the smallest microbe to the largest animal or plant, the genes that give them their specific characteristics and the ecosystems of which they are apart.

In October, the World Conservation Union (also known as the IUCN) published its updated Red List of Threatened Species, a roll call of 11,167 creatures facing extinction – 121 more than when the list was last published in 2000. But the new figures almost certainly underestimate the crisis. Some 1.2 million species of animal and 270,000 species of plant have been classified, but the well-being of only a fraction has been assessed. The resources are simply not available. The IUCN reports that 5714 plants are threatened, for example, but admits that only 4 per cent of known plants has been assessed. And, of course, there are thousands of species that we have yet to discover. Many of these could also be facing extinction.

It is important to develop a picture of the diversity of life on Earth now so that comparisons can be made in the future and trends identified. But it isn't necessary to observe every single type of organism in an area to get a snapshot of the health of the ecosystem. In many habitats, there are species that are particularly susceptible to shifting conditions, and these can be used as indicator species.

In the media, it is usually large, charismatic animals such as pandas, elephants, tigers and whales that get all the attention when a loss of biodiversity is discussed. However, animals or plants far lower down the food chain are often the ones vital for preserving habitats – in the process saving the skins of those more glamorous species. There are known as keystone species.

By studying the complex feeding relationships within habitats, species can be identified that have a particularly important impact on the environment. For example, the members of the fig family are the staple food for hundreds of different species in many different countries, so important that scientists sometimes call figs "jungle burgers". A whole range of animals, from tiny insects to birds and large mammals, feed on everything from the tree's bark and leaves to its flowers and fruits. Many fig species have very specific pollinators. There are several dozen species of the fig tree in Costa Rica, and a different type of wasp has evolved to pollinate each one. Chris Lyle of the Natural History Museum in London – who is also involved in the Global Taxonomy Initiative of the Convention on Biological Diversity – points out that if fig trees are affected by global warming, pollution, disease or any other catastrophe, the loss of biodiversity will be enormous.

Similarly, sea otters play a major role in the survival of giant kelp forests along the coasts of California and Alaska. These "marine rainforests" provide a home for a wide range of other species. The kelp itself is the main food of purple and red sea urchins and in turn, the urchins are eaten by predators, particularly sea otters. They detach an urchin from the seabed then float to the surface and lie on their backs with the urchin shell on their tummy, smashing it open with a stone before eating the contents. Urchins that are not eaten tend to spend their time in rock crevices to avoid the predators. This allows the kelp to grow – and it can grow many centimetres in a day. As the forests form, bits of kelp break off and fall to the bottom to provide food for the urchins in their crevices. The sea otters thrive hunting for sea urchins in the kelp, and many other fish and invertebrates live among the fronds. The problems start when the sea otter population declines. As large predators they are vulnerable – their numbers are relatively small to disease or human hunters can wipe them out. The result is that the sea urchin population grows unchecked and they roam the seafloor eating young kelp fronds. This tends to keep the kelp very short and stops forests developing, which has a huge impact on biodiversity.

Conversely, keystone species can also make dangerous alien species: they can wreak havoc if they end up in the wrong ecosystem. The cactus moth, whose caterpillar is a voracious eater of prickly pear was introduced to Australia to control the rampant cacti. It was so successful that someone thought it would be a good idea to introduce it to Caribbean islands that had the same problem. It solved the cactus menace, but unfortunately, some of the moths have now reached the US mainland – borne on winds and in tourists' luggage – where they are devastating the native cactus populations of Florida.

Organisations like the Convention on Biological Diversity work with groups such as the UN and with governments and scientists to raise awareness and fund research. A number of major international meetings – including the World Summit on Sustainable Development in Johannesburg this year – have set targets for governments around the world to slow the loss of biodiversity. And the CITES meeting in Santiago last month added several more names to its list of endangered species for which trade is controlled. Of course, these agreements will prove of limited value if some countries refuse to implement them.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Every creature has diet connections with others, such as **(30)**_____, which provide a majority of foods for other species. In some states of America, the decline in a number of sea otters leads to the boom of sea **(31)** _____. An impressing case is that imported **(32)** _____ moth successfully tackles the plant cacti in **(33)**_____

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which of these following statements agree with the information given in this passage?

A) The term "biodiversity" consists of living creatures and the environment that they live in.
B) There is a successful case that cactus moth plays a positive role in the US.
C) Usage of hardwoods is forbidden in some European countries.
D) Agriculture experts advise farmers to plant single crops in the field in terms of sustainable farming.

35 According the writer, animals which play an important role on saving the natural habitat and other endangered species ...

A) are called "jungle burgers
B) are well-known and has all the attention from humanity
C) are also known as "keystone species"
D) are the one's vital to survival of humanity

TEST 6 Questions 30–35

Read the following text for questions 30-35.

TASMANIAN TIGER

Although it was called tiger, it looked like a dog with black stripes on its back and it was the largest known carnivorous marsupial of modern times. Yet, despite its fame for being one of the most fabled animals in the world, it is one of the least understood of Tasmania's native animals. The scientific name for the Tasmanian tiger is Thylacine and it is believed that they have become extinct in the 20th century.

Fossils of thylacines dating from about almost 12 million years ago have been dug up at various places in Victoria, South Australia and Western Australia. They were widespread in Australia 7,000 years ago, but have probably been extinct on the continent for 2,000 years ago. This is believed to be because of the introduction of dingoes around 8,000 years ago. Because of disease, thylacine numbers may have been declining in Tasmania at the time of European settlement 200 years ago, but the decline was certainly accelerated by the new arrivals. The last known Tasmainian Tiger died in Hobart Zoo in 1936 and the animal is officially classified as extinct. Technically, this means that it has not been officially sighted in the wild or captivity for 50 years. However, there are still unsubstantiated sightings. Hans Naarding, whose study of animals had taken him around the world, was conducting a survey of a species of endangered migratory bird. What he saw that night is now regarded as the most credible sighting recorded of thylacine that many believe has been extinct for more than 70 years.

"I had to work at night." Naarding takes up the story. "I was in the habit of intermittently shining a spotlight around. The beam fell on an animal in front of the vehicle, less than 10m away. Instead of risking movement by grabbing for a camera, I decided to register very carefully what I was seeing. The animal was about the size of a small shepherd dog, a very healthy male in prime condition. What set it apart from a dog, though, was a slightly sloping hindquarter, with a fairly thick tail being a straight continuation of the backline of the animal. It had 12 distinct stripes on its back, continuing onto its butt. I knew perfectly well what I was seeing. As soon as I reached for the camera, it disappeared into the tea-tree undergrowth and scrub."

The director of Tasmania's National Parks at the time, Peter Morrow, decided in his wisdom to keep Naarding's sighting of the thylacine secret for two years. When the news finally broke, it was accompanied by pandemonium. "I was besieged by television crews, including four to five from Japan, and others from the United Kingdom, Germany, New Zealand and South America," said Naarding.

Government and private search parties combed the region, but no further sightings were made. The tiger, as always, had escaped to its lair, a place many insist exists only in our imagination. But since then, the thylacine has staged something of a comeback, becoming part of Australian mythology.

There have been more than 4,000 claimed sightings of the beast since it supposedly died out, and the average claims each year reported to authorities now number 150. Associate professor of zoology at the University of Tasmania, Randolph Rose, has said he dreams of seeing a thylacine. But Rose, who in his 35 years in Tasmanian academia has fielded countless reports of thylacine sightings, is now convinced that his dream will go unfulfilled. "The consensus among conservationists is that usually; any animal with a population base of less than 1,000 is headed for extinction within 60 years," says Rose. "Sixty years ago, there was only one thylacine that we know of, and that was in Hobart Zoo," he says. Dr. David Pemberton, curator of zoology at the Tasmanian Museum and Art Gallery, whose PhD thesis was on the thylacine, says that despite scientific thinking that 500 animals are required to sustain a population, the Florida panther is down to a dozen or so animals and, while it does have some inbreeding problems, is still ticking along. "I'll take a punt and say that, if we manage to find a thylacine in the scrub, it means that there are 50-plus animals out there."

After all, animals can be notoriously elusive. The strange fish is known as the coelacanth' with its "proto-legs", was thought to have died out along with the dinosaurs 700 million years ago until a specimen was dragged to the surface in a shark net off the south-east coast of South Africa in 1938.

Wildlife biologist Nick Mooney has the unenviable task of investigating all "sightings" of the tiger totaling 4,000 since the mid-1980s, and averaging about 150 a year. It was Mooney who was first consulted late last month about the authenticity of digital photographic images purportedly taken by a German tourist while on a recent bushwalk in the state. On face value, Mooney says, the account of the sighting, and the two photographs submitted as the proof amount to one of the most convincing cases for the species' survival he has seen.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

The Tasmanian tiger, also called thylacine, resembles the look of a dog and has black **(30)**_____ on its fur coat. Many fossils have been found, showing that thylacines had existed as early as **(31)**_____ years ago. They lived throughout **(32)**_____ before disappearing from the mainland. And soon after the **(33)** _____ settlers arrived the size of thylacine population in Tasmania shrunk at a higher speed.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which of the following statements is true of thylacine?

A) So far, there has been thousands of the sightings of the creature

B) They were thought to went extinct but it was proved that this wasn't true

C) They were always a myth

D) They aren't easy to catch but they can be found eventually

35 In this passage, Dr. David Pemberton believes that ...

A) We may not see thylacine again in the future as its' population went extinct years ago.

B) It doesn't require a certain number of animals to ensure the survival of a species.

C) The government should spend more to rediscover the species.

D) the Florida panther were also long thought to be extinct but they may have survived.

TEST 7 — Questions 30–35

Read the following text for questions 30-35.

DIRTY RIVER BUT CLEAN WATER

Floods can occur in rivers when the flow rate exceeds the capacity of the river channel, particularly at bends or meanders in the waterway. Floods often cause damage to homes and businesses if they are in the natural flood plains of rivers. While riverine flood damage can be eliminated by moving away from rivers and other bodies of water, people have traditionally lived and worked by rivers because the land is usually flat and fertile and because rivers provide easy travel and access to commerce and industry.

FIRE and flood are two of humanity's worst nightmares. People have, therefore, always sought to control them. Forest fires are snuffed out quickly. The flow of rivers is regulated by weirs and dams. At least, that is how it used to be. But foresters have learned that forests need fires to clear out the brush and even to get seeds to germinate. And a similar revelation is now dawning on hydrologists. Rivers – and the ecosystems they support – need floods. That is why a man-made torrent has been surging down the Grand Canyon. By Thursday, March 6th it was running at full throttle, which was expected to be sustained for 60 hours.

Floods once raged through the canyon every year. Spring Snow from as far away as Wyoming would melt and swell the Colorado river to a flow that averaged around 1,500 cubic metres (50,000 cubic feet) a second. Every eight years or so, that figure rose to almost 3,000 cubic metres. These floods infused the river with sediment, carved its beaches and built its sandbars.

However, in the four decades since the building of the Glen Canyon dam, just upstream of the Grand Canyon, the only sediment that it has collected has come from tiny, undammed tributaries. Even that has not been much use as those tributaries are not powerful enough to distribute the sediment in an ecologically valuable way.

This lack of flooding has harmed local wildlife. The humpback chub, for example, thrived in the rust-red waters of Colorado. Recently, though, its population has crashed. At first sight, it looked as if the reason was that the chub were being eaten by trout introduced for sport fishing in the mid-20th century. But trout and chub co-existed until the Glen Canyon dam was built, so something else is going on. Steve Gloss, of the United States Geological Survey (USGS), reckons that the chub's decline is the result of their losing their most valuable natural defense, Colorado's rusty sediment. The chub were well adapted to the poor visibility created by the chick, red water which gave the river its name and depended on it to hide from predators. Without the cloudy water, the chub became vulnerable.

And the chub are not alone. In the years since the Glen Canyon dam was built, several species have vanished altogether. These include the Colorado pike-minnow, the razorback sucker and the roundtail chub. Meanwhile, aliens including fathead minnows, channel catfish and common carp, which would have been hard, put to survive in the savage waters of the undammed canyon, have moved in.

So flooding is the obvious answer. Unfortunately, it is easier said than done. Floods were sent down the Grand Canyon in 1996 and 2004 and the results were mixed. In 1996 the flood was allowed to go on too long. To start with, all seemed well. The floodwaters built up sandbanks and infused the river with sediment. Eventually, however, the continued flow washed most of the sediment out of the canyon. This problem was avoided in 2004, but unfortunately, on that occasion, the volume of sand available behind the dam was too low to rebuild the sandbanks. This time, the USGS is convinced that things will be better. The amount of sediment available is three times greater than it was in 2004. So if a flood is going to do some good, this is the time to unleash one.

Even so, it may turn out to be an empty gesture. At less than 1,200 cubic metres a second, this flood is smaller than even an average spring flood, let alone one of the mightier deluges of the past. Those glorious inundations moved massive quantities of sediment through the Grand Canyon, wiping the slate dirty, and making a muddy mess of silt and muck that would make modern river rafters cringe.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

THE ECO-IMPACT OF THE CANYON DAM

Floods are people's nightmare. In the past, the canyon was raged by flood every year. The snow from far Wyoming would melt in the season of **(30)**_____ and caused a flood flow peak in Colorado river. In the four decades after people built the Glen Canyon Dam, it only could gather **(31)**_____ together from tiny, undammed tributaries. humpback chub population reduced, why?

The non-stopped flow led to the washing away of the sediment out of the canyon, which poses a great threat to the chubs because it has poor **(32)**_____ away from predators. In addition, the volume of **(33)** _____ available behind the dam was too low to rebuild the bars and flooding became more serious.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which of the following statements agree with the information given in the passage?

A) The flood peaks at almost 1500 cubic meters every eight years.
B) Contribution of sediments delivered by tributaries has little impact.
C) The decreasing number of chubs is always caused by introducing of trout since the mid 20th century.
D) It seemed that the artificial flood in 1996 had achieved success partly at the very beginning.

35 According to the passage, which of these species aren't native to the Colorado river?

A) the humpback chub
B) the common carp
C) the roundtail chub
D) the razorback sucker

TEST 8 Questions 30–35

Read the following text for questions 30-35.

SEED HUNTING

With a quarter of the world's plants set to vanish within the next 50 years, Dough Alexander reports on the scientists working against the clock the preserve the Earth's botanical heritage. They travel the four corners of the globe, scouring jungles, forests and savannas. But they're not looking for ancient artefacts, lost treasure or undiscovered tombs. Just pods. It may lack the romantic allure of archaeology or the whiff of danger that accompanies going after a big game, but seed hunting is an increasingly serious business. Some seek seeds for profit-hunters in the employ of biotechnology firms, pharmaceutical companies and private corporations on the lookout for species that will yield the drugs or crops of the future. Others collect to conserve, working to halt the sad slide into extinction facing so many plant species.

Among the pioneers of this botanical treasure hunt was John Tradescant, an English royal gardener who brought back plants and seeds from his journeys abroad in the early 1600s. Later, the English botanist Sir Joseph Banks – who was the first director of the Royal Botanic Gardens at Kew and travelled with Captain James Cook on his voyages near the end of the 18th century – was so driven to expand his collections that he sent botanists around the world at his own expense.

Those heady days of exploration and discovery may be over, but they have been replaced by a pressing need to preserve our natural history for the future. This modern mission drives hunters such as Dr Michiel van Slageren, a good-natured Dutchman who often sports a wide-brimmed hat in the field – he could easily be mistaken for the cinematic hero Indiana Jones. He and three other seed hunters work at the Millennium Seed Bank, an 80 million [pounds sterling] international conservation project that aims to protect the world's most endangered wild plant species.

The group's headquarters are in a modern glass-and-concrete structure on a 200-hectare Estate at Wakehurst Place in the West Sussex countryside. Within its underground vaults are 260 million dried seeds from 122 countries, all stored at -20 Celsius to survive for centuries. Among the 5,100 species represented are virtually all of Britain's 1,400 native seed-bearing plants, the most complete such collection of any country's flora.

Overseen by the Royal botanic gardens, the Millennium Seed Bank is the world's largest wild-plant depository. It aims to collect 24,000 species by 2010. The reason is simple: thanks to humanity's effort, an estimated 25 per cent of the world's plants are on the verge of extinction and may vanish within 50 years. We're currently responsible for habitat destruction on an unprecedented scale, and during the past 400 years, plant species extinction rates have been about 70 times greater than those indicated by the geological record as being 'normal'. Experts predict that during the next 50 years further one billion hectares of wilderness will be converted to farmland in developing countries alone.

The implications of this loss are enormous. Besides providing staple food crops, plants are a source of many machines and the principal supply of fuel and building materials in many parts of the world. They also protect soil and help regulate the climate. Yet, across the globe, plant species are being driven to extinction before their potential benefits are discovered.

The world Conservation Union has listed 5,714 threatened species is sure to be much higher. In the UK alone, 300 wild plant species are classified as endangered. The Millennium Seed Bank aims to ensure that even if a plant becomes extinct in the wild, it won't be lost forever. Stored seeds can be used the help restore damaged or destroyed the environment or in scientific research to find new benefits for society- in medicine, agriculture or local industry- that would otherwise be lost.

Seed banks are an insurance policy to protect the world's plant heritage for the future, explains Dr Paul Smith, another Kew seed hunter. "Seed conservation techniques were originally developed by farmers," he says. "Storage is the basis what we do, conserving seeds until you can use them just as in farming," Smith says there's no reason why any plant species should become extinct, given today's technology. But he admits that the biggest challenge is finding, naming and categorizing all the world's plants. And someone has to gather these seeds before it's too late. "There aren't a lot of people out there doing this," he says. "The key is to know the flora from a particular area, and that knowledge takes years to acquire."

There are about 1,470 seedbanks scattered around the globe, with a combined total of 5.4 million samples, of which perhaps two million are distinct non-duplicates. Most preserve genetic material for agriculture use in order to ensure crop diversity; others aim to conserve wild species, although only 15 per cent of all banked plants is wild.

Many seed banks are themselves under threat due to a lack of funds. Last year, Imperial College, London, examined crop collections from 151 countries and found that while the number of plant samples had increased in two-thirds of the countries, the budget had been cut in a quarter and remained static in another 35 per cent. The UN's Food and Agriculture Organization and the Consultative Group on International Agricultural Research has since set up the Global Conservation Trust, which aims to raise the US $260 million to protect seed banks in perpetuity.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Some people collect seeds for the purpose of protecting certain species from **(30)**_____; others collect seeds for their ability to produce crops as well as **(31)** _____. They are called seed hunters. The **(32)** _____ of them included both gardeners and botanists, such as Sir Joseph Banks who financially supported collectors out of his own pocket. The seeds collected are usually stored in seed banks, one of which is the famous millennium seed bank, where seeds are all stored in the **(33)**_____ vaults at a low temperature.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 According the writer of the passage the Millennium Seed Bank ...

A) has around 24,000 species of plants.
B) wants to preserve 25 percent of the world's plant species for 50 years.
C) has already started to deposit many species.
D) is the world's largest wild-plant which is overseen by gardeners.

35 In this passage, the author states the fact that ...

A) The millennium seed bank is the earliest seed bank.
B) technological development is the only hope to save plant species.
C) The purpose of collecting seeds now is different from the past.
D) Even Captain James Cook had a collection of various plants.
