TEST IV

LISTENING

PART 1

You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.

1. A) I usually walk to school.
B) What a pity.
C) It starts at 7 p.m.

2. A) I think it's very expensive.
B) Sure, no problem.
C) I don't like coffee.

3. A) I take the bus every morning.
B) Yes, I know her well.
C) Sorry, I don't work here.

4. A) Quite long years.
B) I don't like that color.
C) I met her at the station.

5. A) It's very cold outside.
B) I'm looking for the supermarket.
C) Yes, you can sit there.

6. A) I can't find my phone.
B) I'd like an orange juice, please.
C) I'm going to the cinema.

7. A) Around half past nine.
B) No, it's not my bag.
C) I usually go by bus.

8. A) I don't drink cola.
B) It is on Tuesday.
C) It's near the bus stop.

PART 2

You will hear someone giving a talk. For each question, fill in the missing information in the numbered space. Write ONE WORD and / or A NUMBER for each answer.

COURSE DETAILS

- The position of speaker **(9)_____** in the Writing Club
- Annual fee **(10)_____** pounds
- Running date: **(11)_____**
- Writing class: Every **(12)_____**
- The course for children: **(13)_____**
- Email: efn. **(14)_____**.org

PART 3

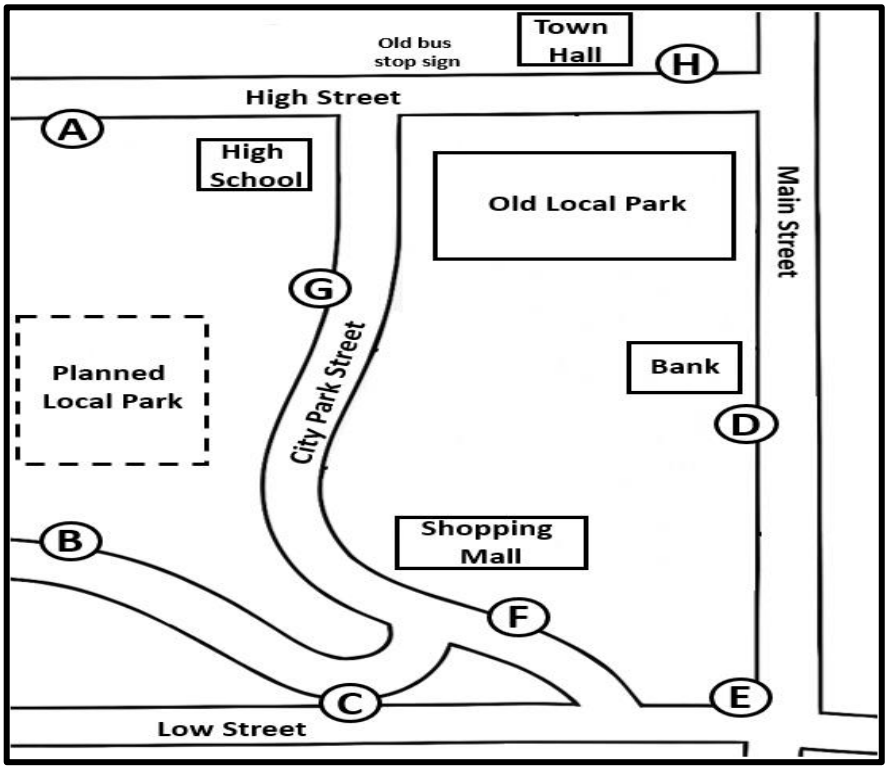

You will hear people speaking in different situations. Match each speaker (1-4) to the place they are at(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.

	A) In drama class
15. Speaker 1 …	B) On board a plane
16. Speaker 2 …	C) In the cinema
17. Speaker 3 …	D) In a swimming pool
18. Speaker 4 …	E) In an amusement park
	F) In a cafe

PART 4

You will hear someone giving a talk. Label the places (19-23) on the map (A-H). There are THREE extra options which you do not need to use. Mark your answers on the answer sheet.

PLANNED CHANGES IN NEWSHIRE CITY

- **19.** New Road construction …
- **20.** Library …
- **21.** Parking area …
- **22.** Flower shop …
- **23.** New bus stop sign …

PART 5

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You will hear two students, Sam and Liz, discussing their university orientation program.

24. What is this conversation mainly about?

A) Their plans for the first week of university.

B) The subjects they will study this semester.

C) The best places to visit near the university.

25. In the end, the two students agreed that...?

A) Sam will join the 'Careers Lecture'.

B) they both attend the 'Uni Tour'.

C) they don't know what to do in the university.

Extract Two

You will hear a student, Eric, talking to his lecturer, Ms Harris, about essay writing.

26. What is Eric mainly talking to Ms Harris about?

A) How to improve his advice on issues.

B) How to begin writing his thesis.

C) How to write summaries.

27. What advice does Ms Harris give Eric?

A) Choose a topic that genuinely interests him

B) Follow the topic suggested by his supervisor

C) Start writing before deciding on a topic

Extract Three

You will hear an interview with someone whose daughters are appearing in a show in London.

28. When Olivia tried to get a part in Mary Poppins, she

A) did not really expect to get the part.

B) was extremely upset not to get the part.

C) was immediately rejected for the part.

29. What happened at the first auditions for The Sound of Music?

A) There were so many people that the family considered leaving.

B) The family arrived later than they had been told to arrive.

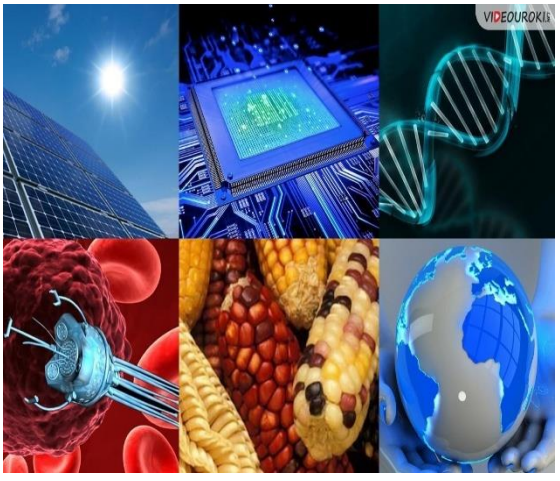

C) Jackie's was able to persuade judges to see her children.

PART 6

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

USES OF NANOTECHNOLOGY

- Nanotechnology could allow the development of stronger **(30)**_____.
- Planes would be much lighter in weight.
- Space **(31)**_____ travel will be made available to the masses.
- Computers will be even smaller, faster, and will have a greater **(32)**_____.
- **(33)**_____ energy will become more affordable.
- Nano-robots could rebuild the **(34)**_____ layer.
- Pollutants such as **(35)**_____ could be cleaned from water more easily.
- There will be no waste from manufacturing.

READING

PART 1

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE PLANET MARS

Mars is the fourth planet from the sun and is often called the red **(1)_____**. This distinct color comes from iron oxide, or rust, on its surface. For years, scientists have been fascinated by Mars, sending robotic rovers to explore its **(2)_____.** These rovers have shown us that Mars has a very thin atmosphere, composed mainly of carbon dioxide. This is one reason why the planet is so cold.

A primary goal of Mars exploration is the search for signs of ancient water. Evidence suggests that liquid water once flowed on its surface, carving out canyons and deltas. Finding the proof of **(3)_____** is crucial because it could indicate that life once existed there. The data sent back by the robotic **(4)_____** helps researchers piece together the planet's history. These dedicated scientists analyze every image and measurement. The ongoing exploration of the planet continues to reveal its secrets. Future missions hope to learn more about its thin atmosphere and geology. The work of these **(5)_____** may one day answer if we are alone in the universe. This long-term **(6)_____** is one of humanity's greatest adventures.

PART 2

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A. You hope to take part in projects that help the environment while improving your language.
B. You need a program that provides a certificate that can help with your university application.
C. You'd like to live with a local family and experience their traditions closely.
D. You want a program that focuses mainly on improving your spoken English.
E. You're looking for a short summer course that includes cultural excursions

F. You'd like to prepare for a language exam while studying abroad.
G. You want to study abroad but don't have enough money to pay for accommodation.
H. You hope to meet people from international companies during your stay.
I. You'd like to do voluntary work related to community development.
J. You want to gain academic experience that could count toward a university degree.

7. Cambridge International College (UK)
This four-week English course emphases on conversation and pronunciation through debates, role plays, and group discussions. Weekend day trips to nearby towns are organized for an extra fee. Homestay is optional.
📧: study@cambridgeintcollege.uk

8. GreenFuture Summer School (Sweden)
A two-week program combining ecological studies with English communication workshops. Students join recycling projects and visit eco-farms. Accommodation is included.
🌐 www.greenfuture.eu

9. CasaLingua Madrid (Spain)
A six-week intensive Spanish course that prepares students for global exams. Classes cover grammar, writing, and test-taking strategies. Students stay with local host families to improve speaking skills naturally.
📞 +34 914 723 507

10. Global Work & Study Program (Canada)
Participants attend academic seminars and join internships at local organizations. Students can receive official diplomas recognized by several universities.
🌐 www.globalworkstudy.ca

11. Oxford Heritage Academy (UK)
Designed for ambitious learners who plan to study abroad later. The program offers scholarships covering tuition and accommodation. Students learn academic writing and research skills through project-based learning.
📧: info@oxfordheritage.org

12. LinguaWorld Tours (Ireland)
Short-term English courses that include sightseeing, cultural visits, and guided tours. Suitable for those who want to practice language skills outside the classroom.
📧: tours@linguaworld.ie

13. HandsOn Volunteers (Ghana)
Join a one-month volunteering experience in rural villages, helping improve schools and community centers. Participants also attend short cultural workshops. Accommodation is simple but free.
🌐 www.handsonvolunteers.org

14. BusinessBridge Paris (France)
A specialized language program for students interested in intercontinental business. It includes company visits, summits with professionals, and seminars on global communication.
📧: info@businessbridge.fr

PART 3

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

LIST OF HEADINGS

A) A wrong term that never changed
B) When friendship turned into tragedy
C) A people who respected nature
D) The first acts of generosity between cultures
E) The mystery of where they came from
F) A culture built on honesty and gratitude
G) Adopting the customs of strangers
H) Forced to leave their lands by deception and power

15. Paragraph I
16. Paragraph II
17. Paragraph III
18. Paragraph IV
19. Paragraph V
20. Paragraph VI

I. The Native Americans were the first known inhabitants of the Americas and are often described as the world's first environmentalists. To them, every part of nature — animal, plant, or stone — possessed a spirit and deserved respect. They took what they needed from the land but never more than necessary, showing deep gratitude for nature's gifts. Their traditions taught that harming the earth would ultimately harm the people themselves, creating a strong sense of balance and responsibility toward the environment.

II. Native Americans lived in many different regions, yet the exact origins of their ancestors remain uncertain. Some believe they have always lived on the continent since the beginning of time. Others argue that their ancestors migrated from Asia thousands of years ago, crossing the Bering Strait Land Bridge. Although many theories exist, none have been definitively proven. Modern DNA studies continue to explore these questions, revealing that the genetic history of Native peoples is far more

complex than once imagined.

III. When Christopher Columbus arrived in the Americas, he mistakenly believed he had reached India. As a result, he called the native inhabitants “Indians,” a name that — despite being incorrect — became permanent. In reality, there were numerous independent tribes, each with unique languages, traditions, and beliefs. Nevertheless, the collective term “Indians” persisted for centuries. Even today, the debate continues over which term — “Native American,” “Indigenous,” or “First Nations” — best reflects their true identity and heritage.

IV. When the Pilgrims arrived on the Mayflower in 1620 seeking religious freedom, they were warmly received by a local tribe in Massachusetts. The Native Americans shared food, farming knowledge, and hunting techniques, teaching the newcomers how to survive in the unfamiliar environment. The holiday of Thanksgiving still commemorates this early act of kindness and cooperation. Without such guidance, the settlers might not have survived their first harsh winter in the New World.

V. Sadly, this peaceful coexistence did not last long. Native Americans had no immunity to European diseases such as smallpox, measles, and typhus. As settlers spread across the land, these illnesses devastated indigenous populations. It is estimated that in some tribes, up to ninety percent of people died within a century of European contact — a tragedy beyond measure. The loss of so many lives also meant the disappearance of languages, stories, and cultural traditions that could never be recovered.

VI. As European colonization expanded, the situation for Native Americans worsened. Many were deceived into signing treaties after being given alcohol, or simply forced off their ancestral lands through violence. They were eventually confined to reservations — areas that were often barren and unfit for farming. Through lies and force, much of their territory was taken from them forever. Generations later, the struggle for land rights and cultural recognition continues to shape Native American life and identity.

PART 4

Read the following text for questions 21-29.

A MAN OF SCIENCE AND IMAGINATION

Sir Christopher Wren was one of the most remarkable figures of 17th-century England — a scientist, mathematician, astronomer, inventor, and ultimately, one of the country's greatest architects. Born in 1632 into a wealthy and educated family, he was a rather fragile child who received private lessons from tutors and his father at home. Wren's early education remains somewhat uncertain, as there are no records confirming whether he attended any formal school. However, historical sources show that in 1650 he entered Oxford University, where he studied mathematics and natural philosophy — what we now call science.

After completing his studies, Wren became a Professor of Astronomy at Gresham College in London. He was responsible for delivering weekly speeches in both Latin and English, which were open to anyone free of charge. His lectures attracted great attention and led to the creation of the Royal Society — the first official scientific organization in England. Later, he also taught at Oxford, where he continued his research in many areas, including optics, mechanics, medicine, and meteorology. Always curious, Wren designed and improved various devices and machines, experimenting with submarine construction, telescope design, and road paving techniques.

During this period, Wren's interests gradually expanded from science to architecture. In the 17th century, the job of "architect" was not yet recognized as a formal profession. Important buildings were usually designed according to the patron's wishes and executed by skilled craftsmen such as carpenters and masons. For well-educated gentlemen like Wren, architecture was considered more of a refined hobby than a career. Nevertheless, his extraordinary talent quickly gained recognition. After the Great Fire of London in 1666 destroyed much of the city, Wren was entrusted with the massive task of rebuilding many of its churches. In total, he designed 51 London churches — including his masterpiece, St Paul's Cathedral — each one distinctive yet sharing a classical elegance. His attention to detail and insistence on high-quality materials set new standards for English architecture. Wren was knighted in 1673 in recognition of his exceptional contributions.

The construction of St Paul's Cathedral began in 1675 when Wren was 43 years old. Blending elements of Medieval, Classical, and Baroque design, it remains a symbol of London's resilience and beauty. Its enormous dome and breathtaking interior demonstrate both scientific precision and artistic vision. The project took 35 years to complete, and fittingly, the final stone was laid by Wren's son.

Today, St Paul's Cathedral remains an active place of worship as well as a national landmark. Over the centuries, it has hosted numerous significant events — from the funerals of Lord Nelson and Sir

Winston Churchill to services marking the end of both World Wars. More recently, it has been the site of royal celebrations, including the Queen's jubilees and birthdays.

Sir Christopher Wren passed away on February 25th, 1723, at the age of 90. He was buried in St Paul's Cathedral, the very building he had created. His gravestone bears a Latin inscription that translates: "If you seek his monument, look around you." It reminds visitors that his true memorial is not a statue or a plaque — but the magnificent work that still stands above London today.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. What is known about Christopher Wren's childhood education?

A) He attended a famous public school.
B) He was taught privately due to poor health.
C) He was educated abroad with other noble families.
D) He learned mostly through self-study and books.

22. As Professor of Astronomy at Gresham College, Wren…

A) had to give public lectures in two languages.
B) was required to teach only to university students.
C) charged a small fee for his lessons.
D) focused mainly on architecture and mechanics.

23. Which of the following was not part of Wren's scientific work?

A) Telescope design
B) Weather studies
C) Plant breeding
D) Submarine experiments

24. Why was Wren considered unusual for his time as an architect?

A) He was not a trained craftsman but a learned scientist.
B) He mostly built wooden houses instead of stone buildings.
C) He designed buildings only outside of London.
D) He refused to work for wealthy patrons.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. Wren's lectures at Gresham College were open only to scientists.

A) True B) False C) No Information

26. Christopher Wren became famous only after the Great Fire of London.

A) True B) False C) No Information

27. St Paul's Cathedral was completed entirely during Wren's lifetime.

A) True B) False C) No Information

28. St Paul's Cathedral was originally built in the 18th century to commemorate the end of the First World War.

A) True B) False C) No Information

29. Wren's gravestone expresses that his architectural work is his real legacy.

A) True B) False C) No Information

PART 5

Read the following text for questions 30-35.

THE SCIENCE OF HAPPINESS

Happiness is something that every culture values, yet it remains one of life's biggest mysteries. Around the world, people pursue success, wealth, and love in their search for lasting joy — but scientific research suggests that true happiness depends not only on what we achieve, but also on how we think, behave, and connect with others.

Scientists describe happiness as a blend of joy, calmness, and life satisfaction. It can originate from simple pleasures — like sharing a meal with friends, watching a sunset, or laughing at a funny story — as well as from greater accomplishments. However, happiness is not just a short-lived feeling; it's also a state of mind. Some people naturally focus on the positive aspects of life, while others find it harder to maintain that emotional balance.

Psychologists and neuroscientists have found that our brains play a crucial role in how happy we feel. When people experience positive emotions, their brains unleash chemicals like dopamine and serotonin, which are linked to delight, motivation, and eased pressure. Activities such as exercise, laughter, listening to music, or even spending time in nature can increase these chemicals, improving our overall mood and mental well-being.

It is fascinating that happiness is not determined solely by external circumstances or the possessions we own. Our mindset and everyday behaviors also play a crucial role in shaping it. Individuals who make gratitude a consistent part of their lives—by acknowledging what they value or noting down the positives—often experience greater overall well-being. Likewise, people who cultivate optimistic thoughts and treat themselves with kindness tend to handle stress more effectively and maintain stronger emotional balance.

Research indicates that individuals who maintain strong bonds—whether with loved ones, friends, or even animals—tend to enjoy better health, greater life satisfaction, and increased longevity. Kindness also has a remarkable influence. Engaging in helpful acts, volunteering, or showing generosity triggers the release of chemicals in the brain that elevate mood, a reaction often referred to as the helper's high. Even simple actions, such as a smile or a thoughtful word, can leave a surprisingly positive and lasting effect.

Money, too, affects happiness — but only to a certain extent. Financial security and the ability to meet basic needs such as food, housing, and safety are essential for peace of mind. However, once those needs are met, earning more money brings only a small increase in long-term satisfaction. In fact, people who focus too much on wealth or possessions often end up feeling less fulfilled.

Experiences — like travelling, learning something new, or spending time with loved ones — usually bring deeper and more lasting happiness than material things.

Finally, happiness doesn't mean being cheerful every moment of the day. Everyone experiences sadness, anger, or stress from time to time. What matters is how we deal with those emotions. Practices such as mindfulness — paying attention to the present moment — along with good sleep, healthy eating, and regular exercise can all help us maintain a positive outlook and a sense of balance in our lives.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Happiness can come from both everyday moments and from reaching important **(30)**_____.

Dopamine and serotonin are chemicals released in the **(31)**_____ that help people feel pleasure and reduce stress.

Practicing **(32)**_____ by appreciating life's good things often leads to greater life satisfaction.

People with close and caring **(33)**_____ usually enjoy better health, live longer, and feel happier.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34. What does the text suggest about the link between money and happiness?

A) Earning more money always results in a happier life.

B) People can only be happy once they are completely wealthy.

C) Once basic needs are covered, extra income has limited impact on happiness.

D) Money is the most reliable source of long-term satisfaction.

35. Which idea best summarizes the overall message of the passage?

A) Happiness means avoiding sadness at all costs.

B) Emotional health is influenced more by gratitude, positive relationships, and attitude than by financial status.

C) Happiness comes entirely from chemical reactions in the brain.

D) Only people who achieve great success can truly be happy.

WRITING

Task 1

You are a member of a fitness club. You received an email from the manager of the club.

Dear Member,
I am sorry to inform you that the fitness center is closing for a month from next Monday. The building needs some repairs and we also plan to install some new equipment. What else do you think should be changed? As the center will not be operating for a month, what kind of alternative activities should we organize in the meantime? We appreciate your opinion very much.
The Manager.

Task 1.1

Write a letter to your friend, who is also a member of the club. Write about your feelings and what you think the club management should do about the situation. Write about 50 words.

Task 1.2

Write a letter to the manager. Write about your feelings and what you think the club management should do about the situation. Write about 120-150 words.

Task 2

You are participating in an online discussion for language learners. The question is: "Is it better to live in a big city or a small town?" Post your response, giving reasons and examples. Write 180-200 words.

SPEAKING

TASK 1.1

- **How often do you use a smartphone?**
- **Do you prefer digital books or physical books?**
- **Do you think technology is making life easier?**

TASK 1.2

- **Tell me what you can see in these two pictures.**
- **What are the benefits of taking photos of special moments with your family?**
- **What is the importance of family?**

TASK 2

- **Tell me about the time you used your creativity.**
- **How did this creativity influence you and your life?**
- **How has technology affected creativity in different spheres?**

TASK 3

The Impact of Technology on Relationships	
Pros: • Technology allows people to stay connected regardless of distance. • It offers various platforms for communication, such as social media, video calls, and instant messaging. • It can help maintain long-distance relationships.	**Cons:** • Technology can reduce face-to-face interaction and emotional connection. • Excessive use of technology can lead to social isolation. • Online communication may not have the same quality and detail as in-person conversations.

TEST V

LISTENING

PART 1

You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.

1. A) I bought it yesterday.
B) I'm looking for my phone.
C) It's outside.

2. A) No, I don't like coffee.
B) I'll be in Italy.
C) I start work at nine.

3. A) It's on the table.
B) I left them in the shop.
C) Maybe next weekend.

4. A) It's next to the sofa.
B) It's 07 849 700 567.
C) It's S25 Pro Max

5. A) Only on my birthday.
B) I work in the city centre.
C) Yes, I really enjoy them.

6. A) I usually take the bus.
B) It's history.
C) I'm not hungry right now.

7. A) Yes, you can pay by credit card.
B) No, I don't pay with cash.
C) It's very expensive.

8. A) No, I didn't see that movie.
B) It was great.
C) I'm meeting my friend later.

PART 2

You will hear someone giving a talk. For each question, fill in the missing information in the numbered space. Write ONE WORD and / or A NUMBER for each answer.

EVENT DETAILS

- Name: Daniel
- Go to the library in: **(9)_____**
- Number of books to bring: **(10)_____**
- Day to take place the event: **(11)_____**
- Time: **(12)_____**
- Charge of the event: **(13)_____** pounds.
- Website for more information: **www.(14)_____.com**

PART 3

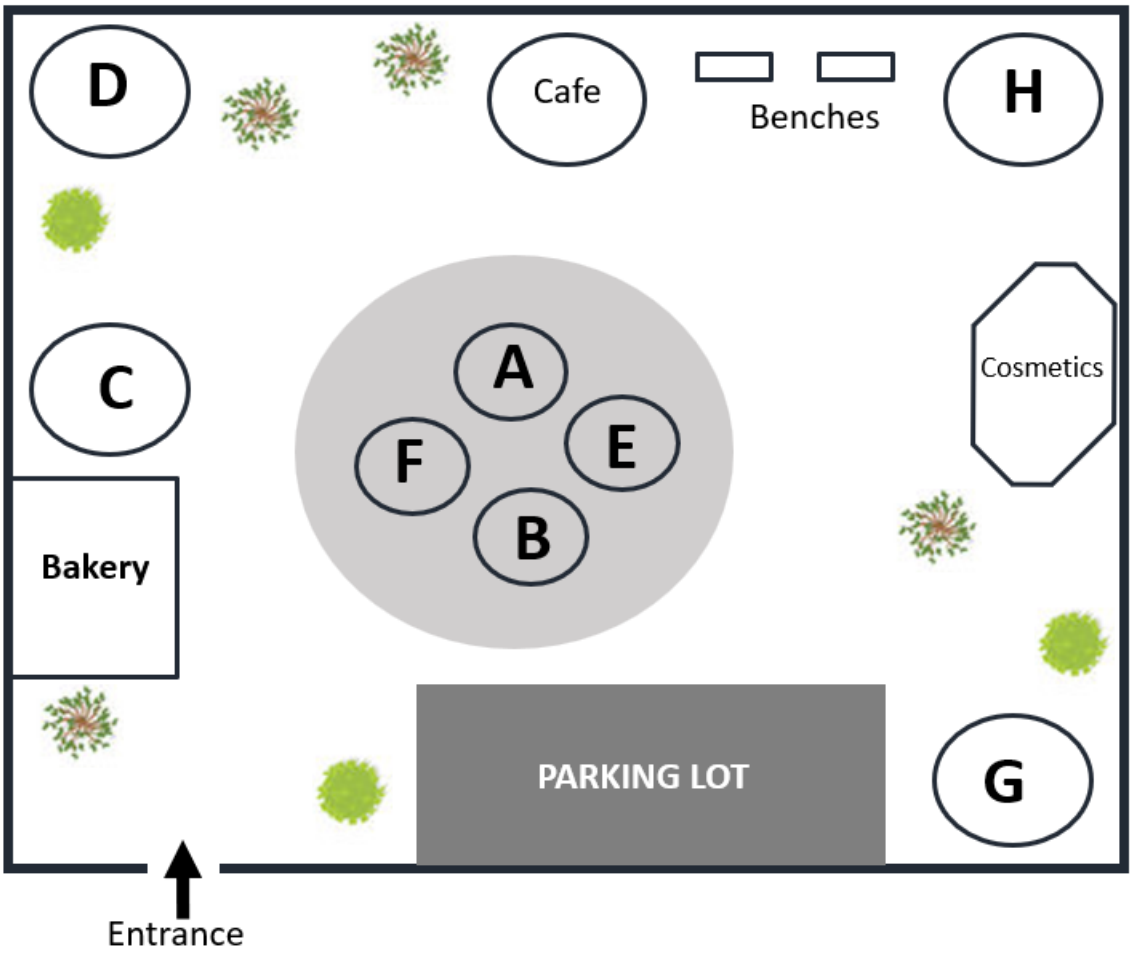

You will hear people speaking in different situations. Match each speaker (1-4) to their job(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.

15. Speaker 1 …
16. Speaker 2 …
17. Speaker 3 …
18. Speaker 4 …

A) A public servant.
B) The speaker's an educator.
C) A job in telecommunications.
D) The speaker works in sales.
E) A position in a media company.
F) The speaker's job involves conservation.

PART 4

You will hear someone giving a talk. Label the places (19-23) on the map (A-H). There are THREE extra options which you do not need to use. Mark your answers on the answer sheet.

- **19.** Fruits …
- **20.** Milk ….
- **21.** T-Shirt …
- **22.** Fish …
- **23.** Vegetables …

PART 5

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You will hear two speakers talking about a new relationship their friend currently has.

24. The woman thinks Noel's ex-girlfriend …

A) spent too little time with him.

B) always agreed with him.

C) made all the couple's plans.

25. How do the speakers feel about Noel's new relationship? They're …

A) hopeful.

B) worried.

C) excited.

Extract Two

You will hear a conversation between two speakers.

26. The speakers are discussing the …

A) shopping facilities in their local area.

B) supermarket's car parking problems.

C) growing number of High Street shops.

27. What's the man's reaction when the woman says she has problems parking?

A) He's not interested in her view.

B) He thinks she has a good point.

C) He's surprised by her comment.

Extract Three

You will hear a phone conversation between a woman and a police representative.

28. The woman is calling because …

A) there's a problem with her map.

B) she's run out of other options.

C) she needs help in an emergency.

29. At the end of the conversation, the woman is …

A) relieved.

B) grateful.

C) embarrassed.

PART 6

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

MARIANNE GREENE – ROLLER COASTER DESIGNER

- Marianne says the first roller coaster that people paid to ride on used tracks which had originally carried coal from the mountains.
- As well as subjects Marianne studied at college, she found a knowledge of **(30)**_____ useful in her work.
- Marianne says a design for a new ride may be adapted to suit the **(31)**_____ it will be built in.
- Designers are usually more concerned than theme park owners about the **(32)**_____ the roller coaster will have to carry.
- Marianne mentions gravity and **(33)**_____ as examples of different forces people are exposed to on roller coaster rides.
- Marianne says that most of the information she uses has come from observing how airline **(34)**_____ are affected by the job they do.
- Marianne explains that most customer complaints involve rides that people think are **(35)**_____.

READING

PART 1

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE MYSTERY OF THE MONTANA DINOSAUR

In recent years, scientists have made many fascinating discoveries about dinosaurs that have changed what we know about prehistoric life. In 2005, there was an unusual discovery found in Montana. Twenty-four different kinds of dinosaurs were uncovered in this one place. Most **(1)_____** that are discovered are just bones. This dinosaur still had soft tissue in its bones. It had cells and blood vessels. This was not known when the dinosaur was first discovered. A scientist **(2)_____** it when she examined it in the lab. Before this discovery, scientists never thought that **(3)_____** in bones could survive more than 100,000 years. The scientists tested the bones. They found that they were 68 million **(4)_____** old. This was the oldest dinosaur ever discovered with this type of tissue. This type of tissue is found in bones of birds when they are ready to make eggshells. This remarkable finding helped **(5)_____** better understand the link between dinosaurs and modern **(6)_____**, offering new clues about evolution and ancient life.

PART 2

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A. You're planning to study in another country and want to improve your academic language before the semester starts.
B. You'd like to stay with a local family to experience everyday life.
C. You're a professional who must improve language skills for workplace communication.
D. This course is dedicated for people who are aged around 50-60 years old.
E. You're looking for a short, intensive course that fits during your summer break.
F. You want to study in a quiet place rather than a big city.
G. You need help preparing for a language-proficiency exam.

H. You're interested in combining language lessons with voluntary or internship experience.
I. You want a course that lets you to be rich in other country.
J. You prefer to learn in an English-speaking country where lessons focus on practical communication.

7. SPANISH AND CULTURE IN SEVILLE ES

Learn Spanish under the Andalusian sun!
Morning classes focus on real communication, while afternoons are for guided cultural tours of the city's historic quarters and flamenco evenings. Accommodation with Spanish host families allows you to practise conversation daily. Students often join weekend excursions to nearby villages for authentic cultural experiences.

🌐 www.sevillelanguages.es

8. ENGLISH FOR CAREERS – DUBLIN IE

Designed for professionals who already use English at work. This course covers business meetings, email writing, and cross-cultural communication. Participants also visit Irish companies to observe workplace culture. Minimum age 25. The course concludes with a short presentation project based on real-world business situations.

🌐 www.efc-dublin.ie

9. FRENCH IN THE ALPS FR

If you prefer mountains to urban noise, our school in Annecy offers small-group French lessons in a peaceful setting. You'll enjoy outdoor activities such as hiking and skiing while improving fluency through natural conversation.

🌐 www.alpinefrench.fr

10. ENGLISH PRE-SESSIONAL PROGRAMME – BATH GB

For students beginning a university degree in the UK. The course develops academic writing, note-taking, and seminar participation skills. You'll also receive support with study techniques and research vocabulary. Participants gain access to the university library and online learning platforms during the course.

🌐 www.bathuniversityprep.ac.uk

11. FRENCH SUMMER INTENSIVE – NICE FR

A fast-paced four-week course focused on grammar, speaking, and listening. Ideal for students with limited time who want quick progress. Afternoon beach activities and film nights included. Accommodation can be arranged in student residences close to the school.

🌐 www.nicefrancesummer.com

12. ITALIAN + INTERNSHIP – FLORENCE IT

Take morning language lessons and spend afternoons gaining work experience in local shops, art studios, or charities. A great way to improve Italian while building your CV. Previous students have completed placements in tourism, fashion, and marketing sectors.

🌐 www.internitalia.it

13. ENGLISH COMMUNICATION COURSE – VANCOUVER CA

Emphasis on fluency, teamwork, and everyday interaction. Includes social clubs and weekend trips to nature parks. Recommended for those seeking a relaxed yet dynamic English-speaking environment. Evening conversation cafés help you practise with local Canadians in informal settings.

🌐 www.vancouverenglish.ca

14. GERMAN TEST PREPARATION – BERLIN DE

Need to pass a language exam? This course focuses on strategies for the Goethe-Institut and TELC tests. Mock exams every week and feedback from experienced examiners ensure strong results. Study materials and exam practice booklets are included in the course fee.

🌐 www.berlingoethe.de

PART 3

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

LIST OF HEADINGS:

A) The ways in which laws preserve order and safeguard society
B) How new laws are designed and passed into action
C) Varied structures of global legal frameworks
D) The earliest emergence of recorded legal codes
E) Outcomes faced by individuals who violate laws
F) Reforming laws to uphold justice and equality
G) Debates over the length of certain punishment periods
H) The principal divisions within legal systems

15. Paragraph I
16. Paragraph II
17. Paragraph III
18. Paragraph IV
19. Paragraph V
20. Paragraph VI

THE ROLE OF LAWS IN MODERN SOCIETY

I. Every society requires a clear set of guidelines to operate smoothly. These guidelines, called laws, direct how individuals should act. Laws define what behavior is acceptable and what is not. Their main purpose is to safeguard people, resolve conflicts, and ensure public security. For instance, traffic regulations help prevent accidents, while criminal laws stop theft and violence. Without laws, citizens might feel unsafe, and communities could quickly fall into chaos and disorder.

II. The idea of creating laws is not new. Thousands of years ago, ancient civilizations began developing written codes of conduct. One of the earliest known examples is the Code of Hammurabi from Babylon, which detailed specific punishments for various offenses. This reveals that even ancient people valued justice and fairness. Later, Roman law became more advanced and has greatly influenced modern legal systems, especially throughout Europe and other regions shaped by Roman traditions.

III. In most countries today, new rules start as proposals written by elected lawmakers. These representatives discuss, debate, and often revise them before taking a vote. If a majority supports the proposal, it officially becomes a law. Afterward, courts and judges interpret and apply these laws to actual situations. In democratic nations, ordinary citizens can also participate by signing petitions, joining advocacy groups, or voting for leaders who share their views on justice.

IV. Laws do not all serve the same function. Criminal laws address crimes such as robbery, fraud, or assault. Civil laws handle disagreements between people, such as property issues or contract breaches. Family laws deal with matters like marriage, divorce, and child custody, while environmental laws aim to protect nature. Traffic laws help maintain safety on the roads. Dividing the law into these categories allows governments to manage society's complexity more clearly and fairly.

V. Anyone who breaks the law faces consequences. These can include paying fines, losing a license, doing community service, or, for serious crimes, going to prison. The severity of punishment depends on the seriousness of the offense. Courts are responsible for ensuring that penalties are fair and consistent. Yet, public debates often arise — some argue that certain punishments are too harsh, while others believe they are too lenient.

VI. For any legal system to function effectively, its laws must be fair, flexible, and adaptable. When rules are unjust, people may lose faith in their government, leading to protests or defiance. Strong laws protect all citizens, especially those who are vulnerable or belong to minority groups, and they must evolve with time. Modern issues such as cybercrime, digital privacy, and climate change demand new and updated legislation. A successful legal system must balance tradition and innovation to keep society both safe and fair for everyone.

PART 4

Read the following text for questions 21-29.

TINY CREATURES, MIGHTY INFLUENCE

Insects are the most abundant and varied group of animals on Earth. They inhabit nearly every environment imaginable — from humid rainforests and scorching deserts to icy mountaintops and dark underground caves. Some even share our living spaces, feeding on our food and nesting in our homes. Experts estimate that there may be over ten million species of insects worldwide, although only around one million have been formally described. Statistically, for every single person, there could exist over 200 million insects. Their hidden world is vast, intricate, and endlessly fascinating.

Despite their diversity, all insects share a number of unique physical traits. Each insect's body consists of three sections — the head, thorax, and abdomen — and features six legs and a pair of antennae. Many insects have wings, which help them to travel, locate mates, or escape predators. Yet not all species can fly; ants and fleas, for instance, lack wings but are still perfectly suited to their environments. Insects belong to the wider animal group known as arthropods, which also includes spiders, crabs, and centipedes. However, unlike their relatives, insects always possess six legs and a three-part body design, setting them apart within the animal kingdom.

Insects perform indispensable tasks within ecosystems. Bees, for example, pollinate nearly one-third of all the food humans consume. Without their activity — and that of other pollinators — the reproduction of many fruits, vegetables, and flowers would be severely disrupted. Ants contribute by cleaning their habitats, feeding on dead organisms and leftover food, helping to prevent the spread of disease. Butterflies and moths, admired for their elegance, also assist in pollination while enriching natural landscapes with color. Farmers often rely on ladybirds, which feed on pests such as aphids that damage harvests. Because of these small but vital creatures, many plants thrive without excessive dependence on chemical pesticides.

Life is not easy for insects, and survival demands creativity. Over time, they have developed remarkable defensive mechanisms. Some camouflage themselves to match leaves or bark, while others display bright warning colors like red, orange, or yellow to signal toxicity. Beetles protect themselves with hard shells, whereas flies depend on rapid flight to escape danger. Certain species release unpleasant smells or painful stings as chemical weapons. Communication is also crucial for safety — ants leave chemical trails to guide their nestmates to food, and crickets rub their wings together to produce rhythmic chirps that attract mates or claim territory.

Perhaps the most intriguing feature of insects is their life cycle. Most undergo metamorphosis, progressing through four stages — egg, larva, pupa, and adult. Take the butterfly as an example: it begins as an egg, transforms into a caterpillar, becomes a chrysalis, and finally emerges as an adult butterfly. This process enables insects to inhabit different environments and functions throughout life. Some species, such as dragonflies, begin their existence underwater before taking flight as adults — a clear demonstration of their extraordinary adaptability.

Many insects also show impressive levels of social organization. While some live solitary lives, others — including ants, bees, and termites — form highly structured colonies. These societies are divided into distinct castes: workers, soldiers, and queens, each with specialized duties. Workers gather food, soldiers defend, and queens reproduce. Such cooperation allows colonies to survive even under extreme conditions. Scientists often liken these communities to human cities, as both rely heavily on teamwork, communication, and shared purpose.

Insects are not only vital to nature but also essential to human existence. They recycle nutrients, pollinate crops, and serve as food sources for birds, reptiles, and fish. Without them, entire ecosystems would collapse, and human agriculture would face catastrophic losses. Yet insect populations are rapidly declining due to pollution, habitat destruction, and climate change. Safeguarding these small creatures is therefore critical — not merely for their survival, but for the stability of the planet and humanity itself.

Although they may seem insignificant, insects are among the most successful species ever to inhabit Earth. Their capacity to adapt, cooperate, and contribute makes them truly exceptional. They remind us that even the tiniest beings can leave the largest mark on our world.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. According to the text, scientists suggest that insects …

A) vastly outnumber humans on Earth.

B) exist in fewer numbers than most animals.

C) are found only in warm and tropical regions.

D) have all been officially classified.

22. What feature clearly separates insects from other arthropods?

A) The ability to fly with a pair of wings.

B) Having eight legs like spiders and crabs.

C) A preference for living in organized colonies.

D) A body divided into three parts and six legs.

23. Farmers gain advantages from certain insects because they …

A) lessen the need for chemical fertilizers.

B) naturally control other species that destroy crops.

C) provide useful substances like honey and wax.

D) improve soil structure through digging tunnels.

24. Which statement does not reflect the way insects protect themselves?

A) They employ diverse colors, scents, and behaviors as defense.

B) They depend mainly on rapid flight for safety.

C) They can change body size instantly to stay hidden.

D) They release dangerous gas to frighten predators.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. Insects' wings enable them to fly over a long distance.

A) True B) False C) Not Given

26. Insects and spiders belong to the same larger animal group.

A) True B) False C) Not Given

27. Crickets use sound created by their wings to communicate.

A) True B) False C) Not Given

28. Only aquatic insects experience metamorphosis during their life cycle.

A) True B) False C) Not Given

29. The writer argues that protecting insects is equally important for humans.

A) True B) False C) Not Given

PART 5

Read the following text for questions 30-35.

A NEW GIANT IN THE SKY

In the misty mountains of Guizhou Province, China, a new engineering wonder now stretches across the deep Huajiang Canyon. On Sunday, the Huajiang Grand Canyon Bridge officially opened to the public — instantly becoming the tallest bridge in the world, rising an astonishing 625 metres above the Beipan River. The project represents not only a record-breaking height but also remarkable technological progress. The bridge extends a total of 2,890 metres, with a main span of 1,420 metres, making it the longest bridge ever built in such steep and challenging terrain. It is widely viewed as one of the most advanced constructions of its kind anywhere on Earth.

For people living in the region, the bridge is far more than just a symbol of progress — it's a practical lifeline. Before it was built, drivers had to take a winding two-hour journey to cross the river. Now, thanks to the bridge, that same trip takes barely two minutes. This dramatic reduction in travel time allows local people to reach schools, hospitals, and workplaces much more easily. Transporting goods such as food, medicine, and building materials has also become far faster and cheaper. Businesses can grow more efficiently, families can stay connected, and rural areas can integrate better with nearby cities. A government official stated that the bridge would "inject new economic energy into the region" by linking isolated areas with major trade routes.

China's achievements in bridge construction are attracting global attention. According to *highestbridges.com*, the 18 tallest bridges in the world are all located in China — either already completed or still under construction. Experts say this success proves the country's growing leadership in large-scale infrastructure and engineering innovation.

Building the Huajiang Grand Canyon Bridge was no simple task. Engineers had to overcome dangerous winds, high altitudes, and extremely steep cliffs. To ensure safety, they equipped the bridge with special wind-resistant systems that allow it to remain stable during storms or bad weather. Advanced technology was used to lift and position materials across the deep canyon, requiring extraordinary precision and teamwork. Engineers around the world now study this bridge as a model of what can be achieved when human skill meets determination.

However, the bridge's significance extends far beyond transportation and industrial value. It has evolved into a major destination for tourists, capturing attention with its magnificent scenery. Authorities anticipate that the site will welcome a huge number of tourists annually. To accommodate them, a modern visitor centre has been established, featuring a café, a geological museum that illustrates how the canyon was formed, and even a bungee-jumping platform designed for adventure enthusiasts seeking an adrenaline rush.

In a broader sense, the bridge represents China's transformation over the past few decades. Once, many rural regions were isolated with little access to modern transport. Today, the country is home to the tallest bridges, the fastest trains, and some of the world's most ambitious engineering projects. The Huajiang Grand Canyon Bridge is more than a structure — it's a symbol of how quickly innovation can reshape a nation.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

This enormous **(30)_____** is regarded as one of the most advanced bridges ever created, as well as the tallest.

Thanks to the new bridge, a long-distance drive has been reduced to just **(31)_____**.

Engineers added special technology to make the bridge remain steady during severe **(32)_____**.

Besides improving travel, the bridge is expected to draw millions of **(33)_____** every year.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34. What is the most significant advantage of the Huajiang Grand Canyon Bridge for locals?

A) It allows faster movement and stronger relations between communities.

B) It has become the main source of food and medicine in the region.

C) It lowers the overall cost of car ownership in China

D) It replaces older bridges that collapsed in the past.

35. Why is this bridge considered a global engineering success?

A) It was built in record time using very cheap materials.

B) It combines height, design innovation, and extreme environmental challenges.

C) It is the first bridge built entirely by international companies.

D) It is shorter than other bridges but stronger in design.

WRITING

You are a member of a travel club. You received this email from the club.

Dear member,
I am writing to tell you that the famous travel writer Mr. David Price will unfortunately not be able to attend our next club meeting. Although Mr. Price will not be there to sign copies of his new book Around the World in Eighty Ways, members of the club will be able to buy a copy for the price of twenty-five pounds. If you would like to reserve a copy of the book, please contact the club secretary.

Task 1.1.
Write an email to your friend. Write about your feelings and what the club should do about the situation.
Write about 50 words.

Task 1.2.
Write an email to the president of the club. Write about your feelings and what the club should do about the situation.
Write about 120-150 words.

TASK 2
You are writing a blog post for a student website.
The title is: “Do smartphones make life better or worse for young people?”
Write your opinion with reasons and examples.
Write 180-200 words.

SPEAKING

TASK 1.1

- **Do you enjoy spending time in nature?**
- **Why is it important to protect the environment?**
- **How do you protect the environment in your daily life?**

TASK 1.2

- **Tell me what you can see in these two pictures.**
- **What are the disadvantages of eating fast food?**
- **Do you think laziness is a problem in society today?**

TASK 2

	• **Tell me about an important decision you made in your life.** • **How did that decision influence your life?** • **Should people consult before they make important decisions?**

TASK 3

The Effects of Tourism in a Country	
Pros:	**Cons:**
• Tourism contributes significantly to the economy by creating jobs, generating revenue, and improving local businesses. • It allows for cultural exchange between tourists and locals that promotes understanding and appreciation of different cultures. • Tourism often drives infrastructure improvements such as better transportation, airports, and public services.	• Tourism can cause pollution, harm habitats, and damage natural resources, especially in popular spots. • Too many tourists can lead to overcrowding, which hurts both visitors' experiences and locals' lives. • Too much tourism can commercialize local culture, affecting traditions and identities.

TEST VI

LISTENING

PART 1

You will hear some sentences. You will hear each sentence twice. Choose the correct reply to each sentence (A, B, or C). Mark your answers on the answer sheet.

1. A) Yes, I'm going tomorrow
B) I'll call you later.
C) Not yet.

2. A) It was very expensive.
B) I have been to the post office.
C) I'm free this afternoon.

3. A) Only on weekends.
B) Yes, I learnt as a child.
C) I have no idea.

4. A) I'll have some ice cream.
B) I already finished my homework.
C) I don't have a car.

5. A) Yes, it's mine.
B) I'm going there.
C) No, it isn't hers.

6. A) It's in the kitchen.
B) I like sauce.
C) It is tomato-based.

7. A) Yes, please.
B) No, I already bought it.
C) Yes, add some salt too.

8. A) I'll show his.
B) Here it is.
C) I am very pleased.

PART 2

You will hear someone giving a talk. For each question, fill in the missing information in the numbered space. Write ONE WORD and / or A NUMBER for each answer.

DANCE COMPETITION

- Speaker full name: Rachel (0) **Atkins.**
- For **(9)_____**from: 13-15
- Date to enter by: **(10)_____**
- Send: **(11)_____**
- Website address: www. **(12)_____**.com
- Place: **(13)_____**
- First prize: **(14) £_____**

PART 3

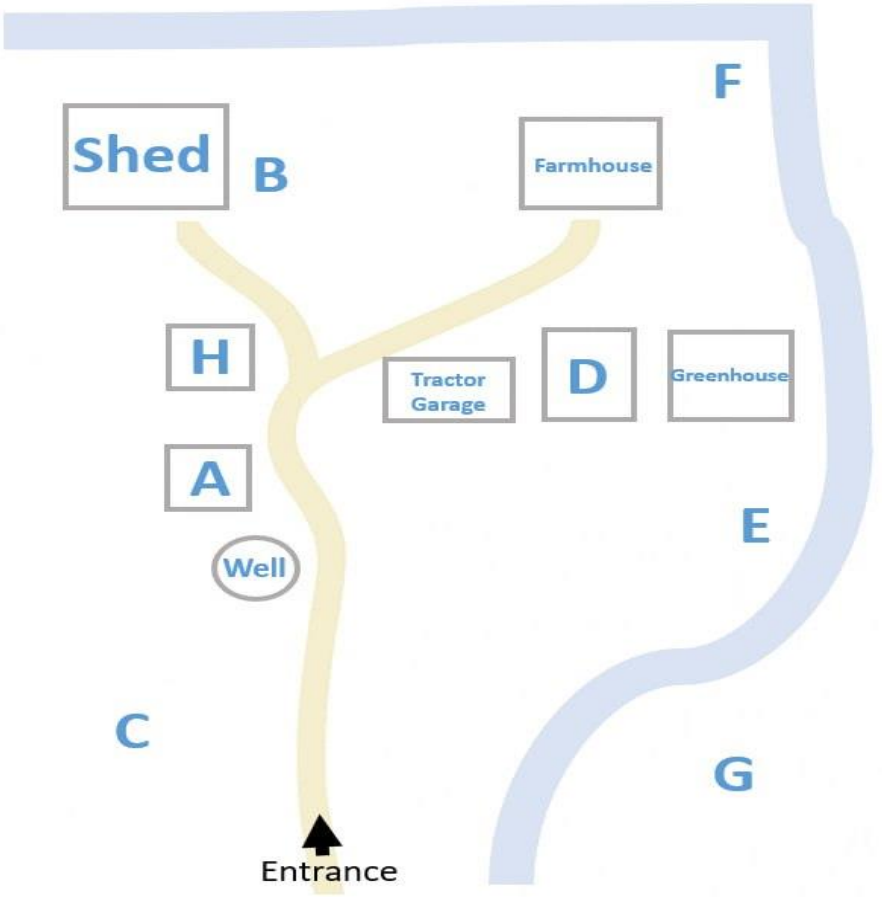

You will hear people speaking in different situations. Match each speaker (1-4) to their working sector(A-F). There are TWO EXTRA options which you do not need to use. Mark your answers on the answer sheet.

	A) Education
15. Speaker 1 …	B) Marketing
16. Speaker 2 …	C) Healthcare
17. Speaker 3 …	D) Tourism
18. Speaker 4 …	E) Journalism
	F) Information Technology

PART 4

You will hear someone giving a talk. Label the places (19-23) on the map (A-H). There are THREE extra options which you do not need to use. Mark your answers on the answer sheet.

RIVER FARM

- **19.** Corn field …
- **20.** The Chicken coop …
- **21.** The Orchard …
- **22.** The Vegetable Garden …
- **23.** The Windmill …

PART 5

You will hear three extracts. Choose the correct answer (A, B or C) for each question (24-29). There are TWO questions for each extract. Mark your answers on the answer sheet.

Extract One

You will hear an interview with someone who has started a magazine for children.

24. What does Kate say about enthusiasm?

A) Children respond positively to it.

B) Children cannot maintain it for long time.

C) Children experience it more than adults.

25. Kate says that she learnt from her research that children …

A) don't want to feel that they are being considered inferior.

B) don't like texts that have too much serious content.

C) don't know some words that she had expected them to know.

Extract Two

You will hear two faculty directors talking about which person in their university to promote.

26. The position needs someone good at …

A) Computers.

B) Dealing with people.

C) Arts.

27. The directors will select someone from the faculty of …

A) Arts.

B) Computing.

C) Business.

Extract Three

28. When can phone calls from artists be difficult for Rachel?

A) when their work doesn't sell

B) when they don't receive payments

C) when their work is not accepted

29. Why does Rachel include a commentary in the catalogue?

A) It gives background information about the artist.

B) It encourages people to buy paintings over the phone.

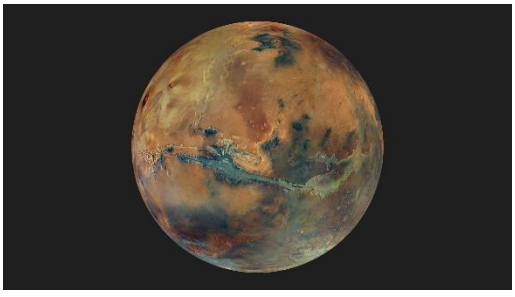

C) It tells people what experts think of the work.

PART 6

You will hear a part of a lecture. For each question, fill in the missing information in the numbered space. Write no more than ONE WORD for each answer.

MARS EXPLORATION

- A mission to Mars could take over a **30**_____ just to reach the planet.
- One major concern for astronauts is exposure to harmful **31**_____ in space.
- Developing the technology for Mars travel is incredibly **32**_____.
- Astronauts may struggle with feelings of **33**_____ due to long periods away from Earth.
- Some critics argue that space funding should be **34**_____ to fight problems on our own planet.

- Scientists worry that Martian soil might contain unidentified **35**_____ that could pose risks.

READING

PART 1

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

DESERT LIFE

Deserts cover a large part of the Earth's surface, and life there is both rare and remarkable. Many unique plants and animals manage to survive in the **(1)_____**. In them, small **(2)_____** such as lizards, jerboas, and beetles feed on seeds, insects, or tiny bits of plants. They hide under rocks during the day to escape the burning sun and come out at night to search for food. Larger animals hunt smaller ones, while some desert creatures **(3)_____**on cactus fruits, roots, and dry grasses to stay alive.

Even though most wild animals try to avoid contact with humans, they are never far away — often hiding in burrows or blending perfectly with the sand. There are many types of desert plants as well. Some plants drop their leaves during the **(4)_____** season to reduce water loss and survive for months without rain. The ground is made of sand, dust, and the remains of ancient plants and rocks. After animals and **(5)_____** die, their bodies rot slowly in the soil because of the heat and lack of moisture. This process helps make the **(6)_____** slightly richer, allowing a few hardy plants to grow again when the rains finally come.

PART 2

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A. Learning about how to reuse old materials in creative ways.
B. Asking questions directly to people who study environmental issues.
C. Finding out how cities and villages differ in their use of energy.
D. Getting ideas for small changes that make your house eco-friendlier.
E. Joining community activities that help protect nature.
F. Discovering how food choices affect the planet.
G. Learning about energy sources that don't rely on fossil fuels.
H. Comparing the environmental cost of different ways to travel.
I. Reading about companies that produce eco-friendly clothes.
J. Taking part in an online course about recycling.

7. www.greenroute.org

Planning a trip soon? This site calculates how much fuel or electricity various types of transport use. Assess trains, planes, and cars to see which option leaves the smallest carbon footprint. There's also a short guide on eco-friendly travel habits. A new feature even lets users analyze routes to see how weather conditions affect energy use.

8. www.natureconnect.org

An online platform where volunteers can find nearby projects such as planting trees, collecting litter, or helping in wildlife reserves. Users can share stories and photos from their experiences to encourage others to take part. Monthly challenges reward the most active members with eco-friendly prizes.

9. www.futureenergy.co.uk

If you want to learn how wind, water, and sunlight can power our homes and cities, this website explains everything clearly. Interactive maps show which countries are switching from oil and gas to renewable energy. It also includes interviews with engineers developing next-generation solar panels.

10. www.askascientist.net

Want to know what experts are discovering about the planet? Here you can read blog posts

written by scientists and even send them your own requests. They reply to selected ones each week, making complex topics easy to understand. A podcast series is also available where specialists discuss their latest environmental studies.

11. www.homeecoideas.com

From saving water to reducing waste, this site gives practical advice for anyone who wants to live more sustainably. There are videos about turning off unused devices, growing your own herbs, and choosing energy-efficient lighting. Visitors can download a free checklist to track their weekly progress at home.

12. www.rethinkdesign.org

Discover creative ways to redesign materials that might otherwise be thrown away. You'll find tutorials on making furniture from cardboard or bags from torn jeans — proof that sustainability can be stylish too! New community challenges invite users to share photos of their own upcycled creations.

13. www.cleanplate.org

Did you know that what we eat influences the earth's health? Learn about how reducing meat, avoiding food waste, and buying local produce can lower your carbon footprint. Includes recipes from environmentally conscious chefs. A calculator also estimates how much water and land you save with each plant-based meal.

14. www.ecostyleworld.com

Stay up-to-date with fashion that doesn't harm the planet. This site reviews brands that use recycled fabrics or pay fair wages to their workers. There's also advice on how to shop responsibly and care for clothes to make them last longer. Its monthly blog highlights new designers creating eco-friendly collections worldwide.

PART 3

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

LIST OF HEADINGS:

A) Protected viewing: safety through distance
B) Travelling with a purpose – nature first
C) The evolution of animal expeditions
D) Etymology and worldwide expansion of safaris
E) Top global destinations for wildlife adventures
F) Pack light, travel smart
G) From hunting to harmony
H) Where the wild things truly are

15. Paragraph I
16. Paragraph II
17. Paragraph III
18. Paragraph IV
19. Paragraph V
20. Paragraph VI

DISCOVERING THE SAFARI EXPERIENCE

I. A safari traditionally refers to a journey through untamed land — most often in vast grasslands or dense jungles — undertaken to observe or hunt wild animals. Historically, safaris were primarily hunting expeditions organized by wealthy Europeans seeking trophies such as lion skins or elephant tusks. Over the decades, however, this perception has dramatically evolved. Today, most safaris are centred on viewing and photographing animals rather than harming them. The rise of wildlife protection laws and global concern about endangered species has led to a new, ethical approach where the aim is to witness wildlife in its natural state, not to conquer it. Modern safaris therefore represent both an adventure and a conscious act of preservation.

II. The term safari originates from the Swahili language but can be traced even further back to the Arabic verb *safara*, meaning *to travel*. While Africa remains the birthplace and spiritual home of the

safari tradition, the concept has expanded across continents. Today, safari adventures can be found not only in the savannas of Kenya or Tanzania but also among the dense jungles of India, the icy landscapes of Antarctica, the arid outback of Australia, or the lush rainforests of the Amazon Basin. In Alaska and Canada, too, guided wildlife tours have become increasingly popular. In essence, any destination where animals roam freely and humans are temporary guests can be described as a safari.

III. Although the idea of trekking through the wilderness on foot sounds thrilling, it is often safer to observe animals from a secure vehicle or protected viewpoint. Predators such as lions, tigers, or bears may appear calm at a distance, but their unpredictable instincts can make close human encounters life-threatening. Likewise, frequent intrusion by humans may distress animals or disrupt their feeding patterns. For this reason, many safaris rely on jeeps, minibuses, or even specially designed observation trucks. From within these vehicles, visitors can admire wildlife at close range while remaining safely shielded. This approach ensures both the safety of travellers and the wellbeing of the animals, maintaining the delicate balance between curiosity and conservation.

IV. The duration and style of a safari can vary greatly. Some tours last a mere weekend, while others extend over several weeks, traversing vast regions by plane, jeep, or even hot-air balloon. Many itineraries include camping beneath the stars or staying in eco-lodges near wildlife reserves. Because safaris often involve multiple locations and transport changes, travellers are advised to take only essentials. Overpacking can become a serious inconvenience on budget or mobile safaris, where every kilogram counts. A compact backpack, comfortable clothing, and essential gear such as binoculars and insect repellent are far more valuable than heavy suitcases.

V. Africa remains the ultimate safari places, with Kenya, Tanzania, South Africa, and Botswana drawing millions of visitors each year. Yet, the allure of safari travel extends well beyond this continent. Australia offers unique outback tours featuring kangaroos and emus, while India's national parks are home to Bengal tigers and elephants. In South America, the rainforests of Brazil and Peru provide opportunities to observe monkeys, parrots, and river dolphins in their natural habitats. Meanwhile, in Alaska, visitors can witness the raw beauty of grizzly bears fishing for salmon or watch polar bears wandering along icy shores. Many of these excursions combine multiple experiences — such as cruises, treks, or photography workshops — making the modern safari a global and highly diverse phenomenon.

VI. Closely related to the safari experience is the concept of **eco-adventure** — a form of travel that emphasizes sustainability, education, and respect for nature. An eco-adventure might involve

canoeing along the Amazon River, hiking through tropical rainforests, or joining a conservation-based safari in Africa. These journeys encourage travellers to engage with local communities, learn about fragile ecosystems, and minimize their environmental footprint. Responsible tour operators ensure that participants follow *"leave no trace"* principles and often contribute financially to local conservation projects. In this way, eco-adventure tourism transforms ordinary sightseeing into a purposeful journey that benefits both people and the planet.

PART 4

Read the following text for questions 21-29.

THE HIDDEN WORLD BENEATH THE SEA

The ocean covers more than seventy percent of the Earth's surface, yet much of it remains an untouched mystery. Scientists estimate that over eighty percent of the world's seas and oceans have never been properly explored or mapped. In other words, most of our planet's largest ecosystem is still hidden from view. Within this immense, dark, and shifting realm lie countless secrets — from strange life forms and unexplained natural sounds to puzzling underwater structures and phenomena that science has only begun to understand. The deep ocean, in many ways, is like another planet — unfamiliar, dangerous, and full of extraordinary surprises waiting to be revealed.

One of the most enigmatic areas of the ocean is the deep-sea floor. This vast region exists in total darkness, where the pressure is so immense that humans cannot survive without specially designed equipment. Because of this, exploration relies heavily on advanced submersibles, underwater robots, and remote sensors. Despite decades of research, oceanographers admit that humanity still knows more about the surface of Mars than about our own seabed. What lies beneath the waves includes underwater mountain ranges, enormous trenches deeper than Everest is tall, and even volcanoes that continue to erupt unseen. In some regions, strange shapes and formations resemble man-made buildings or pyramids. Near Japan, for example, lies the Yonaguni Monument, a mysterious underwater structure. Some claim it is the remains of an ancient civilization swallowed by the sea, while others insist it is simply the product of natural erosion.

The ocean's mysteries are not only visual but also auditory. The sea is full of sounds, many of which are still unexplained. Perhaps the most famous example is "The Bloop", a powerful low-frequency noise recorded in 1997. When it was first heard, it sparked speculation that it came from a gigantic, unknown sea creature lurking in the depths. Later studies suggested it might instead have been produced by the fracturing of icebergs, though no one has ever proved this conclusively. Similar strange noises — deep rumbles, eerie clicks, or metallic echoes — continue to puzzle scientists, who are still trying to identify their sources.

Equally fascinating is the mysterious "milky sea" phenomenon, in which vast sections of the ocean surface suddenly begin to glow with a pale blue or white light. Sailors have reported this event for centuries, describing entire horizons illuminated as if by moonlight. Modern researchers believe that this glow is caused by bioluminescent bacteria that emit light when they gather in huge colonies, although the exact process that allows such vast gatherings to occur remains unclear. Remarkably,

some of these glowing seas are so extensive that satellites orbiting the Earth have captured them from space.

Beneath the waves lies a realm teeming with life — much of it unlike anything found on land. Creatures that dwell thousands of metres below the surface have adapted to an environment of perpetual darkness and crushing pressure. Many possess bizarre shapes, translucent skin, or the ability to generate their own light. Some have no eyes at all, while others display features that seem to belong in science fiction rather than reality. Every deep-sea expedition yields new species, suggesting that our catalog of marine life is far from complete. In fact, the ocean may still hold countless organisms we have yet to encounter — each one revealing something new about the possibilities of life on Earth.

The ocean has long captured human imagination not only because of what lives in it but also because of what has disappeared within it. The Bermuda Triangle, a region of the Atlantic Ocean between Florida, Bermuda, and Puerto Rico, has become famous for mysterious vanishings of ships and aircraft. Over the years, countless theories have been proposed — from supernatural forces and magnetic disturbances to unpredictable weather patterns and navigational errors. While most scientists agree that ordinary explanations such as storms or human mistakes are the most likely causes, the legend continues to fuel curiosity about what really happens in that enigmatic part of the sea.

Though science has revealed parts of the ocean, most of it remains unexplored. Its depths may hold clues to Earth's past, new medicines, energy sources, and the origins of life. As technology improves, researchers aim to explore further — not just out of curiosity, but to understand and protect this vast, mysterious world.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. According to the text, exploring the deep sea remains difficult mainly because …

A) its terrain is too solid for vehicles to enter.
B) people are unable to create machines that survive underwater.
C) extreme darkness, pressure, and temperature make it hostile to humans.
D) it shares many features with the Martian landscape.

22. The mystery known as "The Bloop" …

A) initially startled the scientific community.
B) has never been fully resolved.
C) was conclusively linked to an enormous creature.
D) turned out to be a simple case of breaking ice.

23. The “milky sea” phenomenon refers to …

A) the reflection of starlight on calm water.

B) light patterns that are invisible from orbit.

C) oceanic brightness possibly created by shining microorganisms.

D) waves that shine because of moonlight.

24. The Bermuda Triangle is described as …

A) an area notorious for unexplained disappearances.

B) a geometric barrier built by humans.

C) a common research site for new marine species.

D) a zone where bacteria cluster in luminous waters.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. Scientists admit that we currently know more about Mars than about the deepest parts of Earth’s oceans.

A) True B) False C) Not Given

26. The Yonaguni Monument has been confirmed to be the ruins of a lost city.

A) True B) False C) Not Given

27. Some of the mysterious ocean noises, including “The Bloop,” still have no definite explanation.

A) True B) False C) Not Given

28. The article mentions that numerous films and documentaries have been produced about the Bermuda Triangle.

A) True B) False C) Not Given

29. Scientists have already explored almost all parts of the ocean in detail.

A) True B) False C) Not Given

PART 5

Read the following text for questions 30-35.

THE FIFTH TASTE

When we were young, many of us learnt that there are four basic tastes: sweet, sour, salty, and bitter. However, scientists now say there is a fifth taste: umami. Unlike the other four, umami is more subtle and complex, often described as a deep, savory, or meaty flavor. While it may not be as immediately recognizable as sweetness or sourness, it plays a crucial role in enhancing the overall taste experience of many dishes. From rich broths and aged cheeses to ripe tomatoes and cured meats, umami is present in a wide range of foods, adding depth and satisfaction to every bite.

Umami, which has been enjoyed by Eastern countries for centuries, was recently brought to people's attention in the West by scientists at the University of Miami in the US. The word 'umami' is new to many people, but not to the Japanese, who've used it since the early 1900s to describe the fifth taste. So, what exactly is the umami taste? Well, there's no word in English which means the same, and it's often described as a savory or meaty taste.

Recognizing the umami taste takes practice; it's not as obvious as the other tastes. For example, when eating a homemade chicken soup made without salt or pepper, most people would find it too plain. Adding a small amount of something called 'monosodium glutamate' to that same soup gives it the umami taste and would probably lead you to say that the soup now tastes more like chicken soup than it did before. It's not as simple as making something more salty, as salt alone can do that. Instead, the umami taste is one of richness and fullness. Basically, it just makes the food taste more delicious.

Asian cooks began adding seaweed – a type of plant from the sea – to soups over 1,200 years ago. They'd discovered that foods cooked with seaweed simply tasted better. They didn't know, however, that the reason for this improved flavor was actually the high levels of glutamate which exist naturally in the seaweed.

Eventually, in 1908, a Japanese scientist made the connection between glutamate and seaweed. He then studied the various kinds of glutamate, trying to find one that gave the umami taste, and that could also be produced in factories. He found that the sodium salt form, called monosodium glutamate, was exactly what he was looking for. It provided umami, and it was easy for cooks to use and store. Monosodium glutamate, usually called 'MSG', was first produced in Japan in 1909. Since then, it has been used by food producers and home cooks to improve the flavor of a wide variety of dishes.

So, which foods naturally contain glutamate? Well, meats, cheese and other high-protein foods have a lot of glutamate. In some, the amount of glutamate they contain, and their flavor, increases as they get older. For example, old cheese has more glutamate than young cheese and this also happens with some vegetables, like tomatoes. This is why a red tomato tastes much better than a green one. Think about that the next time you make a sandwich or a salad!

Interestingly, umami is not only about enhancing flavor—it also plays a crucial role in nutrition. Scientists believe that our ability to detect umami evolved as a way to recognize protein-rich foods, which are essential for muscle growth and overall health. When we eat umami-rich foods, they stimulate our appetite and digestion, making us more likely to consume the nutrients our bodies need. Additionally, umami can make low-salt dishes taste more satisfying, which is why it's often used as a healthier alternative to excessive salt in cooking. This makes umami not just a fascinating taste but also an important part of a balanced diet.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

THE UNIQUE FLAVOR OF UMAMI

The **(30)_____** have used the word 'umami' to describe the fifth taste for over a hundred years. It's hard to explain what exactly the umami taste is, but without it many of our foods would not taste quite as **(31)_____**. Foods which have a lot of protein, like meat and **(32)_____**, usually have a lot of glutamate. In some foods, the amount of glutamate in the product changes when they are **(33)_____**.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34. What was the main reason early Asian cooks started adding seaweed to their soups?

A) They wanted to increase the amount of protein in their meals.
B) They noticed that it made their food taste better.
C) They were influenced by Western cooking techniques.
D) They were following scientific research on glutamate.

35. How does umami contribute to a healthier diet?

A) It encourages people to eat more carbohydrates.

B) It makes food taste saltier without increasing salt intake.

C) It eliminates the need for any seasoning in food.

D) It reduces the body's need for protein.

WRITING

You received this email from the president of the technology club.

Dear member,
We are writing to inform you that the trip to the science center to see the robotics display has unfortunately been canceled. Although many of you were looking forward to this excursion, we did not reach the necessary number of participants to continue. However, we hope to reschedule this event for next month. Please let us know if you would like a refund or if you would like to hold your spot for the new date.

Task 1.1.
Write a short email to your friend. Tell your friend your feelings about this and what you plan to do.
Write about 50 words.

Task 1.2.
Write an email to the president of the club. Tell them your thoughts about this and what you would like to do.
Write about 120-150 words.

Task 2
The magazine has asked students to write articles about this topic: "Is learning online better than learning in a classroom?" Write an article giving your opinion and supporting it with examples. Write 180-200 words.

SPEAKING

PART 1.1

- **Do you like traveling?**
- **How do you prefer to travel?**
- **Do you prefer traveling to cities or the countryside?**

PART 1.2

- **Tell me what you can see in these two pictures.**
- **Are dogs good pets for playing and spending time with?**
- **Is it common for people in your hometown to visit cafes often?**

PART 2

- **Tell me about a time social media positively affected your life.**
- **How did that experience shape your use of social media?**
- **Do you think social media does more harm than good in society?**

PART 3

The Impact of Physical Exercise on Health	
Pros:	**Cons:**
• Regular exercise improves overall physical health and fitness. • Physical activity boosts mood and helps reduce stress and anxiety. • Exercise can increase energy levels and improve sleep quality.	• Over-exercising can lead to physical injuries or burnout. • Not everyone has access to gyms or safe outdoor spaces for exercise. • Some may feel pressure to meet unrealistic fitness standards, leading to negative body image.
