PAPER 2: READING

The Reading Paper consists of **FIVE** parts.

Part 1: Questions **1-6;**
Part 2: Questions **7-14;**
Part 3: Questions **15-20;**
Part 4: Questions **21-29;**
Part 5: Questions **30-35.**

Each question carries **ONE** mark.

Total time allowed: **1 hour**

You may write on the question paper if you wish, but you must transfer your answers to the Answer Sheet within the time limit. No extra time is allowed to do so.

FOLLOW THE INSTRUCTIONS OF THE INVIGILATORS!
AT THE END OF THE PAPER, THE QUESTION PAPER WILL BE COLLECTED BY THE INVIGILATOR.
NO MATERIALS CAN BE REMOVED FROM THE EXAMINATION ROOM.
DO NOT OPEN THE QUESTION PAPER UNTIL YOU ARE TOLD TO DO SO!

Please write your full name here: _____

(Candidate’s full name)

Please sign here: _____

(Signature)

The test booklet consists of 9 (nine) printed pages

TEST 1

Read the following text for question 21-29.

PENGUINS

There are seventeen kinds of penguins in the world. They are all alike in some ways and all cannot fly. All have dark backs and white fronts and live in the Southern Hemisphere near the sea.
They differ in several ways. They can be as small as 16 inches or as tall as 4 feet. They differ in the exact location they inhabit. Some live in the frigid climate of Antarctica. Others can live along the coast of forested land. Galapagos penguins live three thousand miles north of Antarctica in a tropical climate at the equator. All penguins live at or south of the equator.
Some penguins are known for yellow or orange feathers on their heads. Some have a single or double black band across their upper chest. Brush-tailed penguins have tails that are longer than any other. The emperor and the king are called the giant penguins. The little blue and the yellow-eyed are isolated types of penguins not related to any other. Sometimes penguins are named by what they look like. Sometimes they are named based on where they live.
Penguins have torpedo-shaped bodies, long and slim. They can move quickly and gracefully through the sea. Their short wings and flippers move up and down swiftly. They steer with their tails and feet. Penguins have solid bones. This helps them dive. They can leap out of the water. They can travel twenty-five miles an hour for short distances. Some types of penguins may live in one area in summer and travel a good distance for the winter. The biggest penguins are the fastest swimmers and best divers. Emperors can dive as much as fifteen hundred feet below the surface of the ocean for prey, though food is much closer to them.
Penguins feed on fish, squid and krill. They have no teeth. Their tongues and roofs of their mouths are covered with stiff spines which keep slippery prey inside. A penguin comes up from below to strike a school of fish. In a few minutes a penguin can catch and eat a hundred small fish or krill.
Wherever penguins swim, the water is cold. Their coat of small, scale-like feathers protects them from the cold. Penguins can groom themselves by taking oil from a gland at the base of their tails. With their beaks they spread this oil all over their feathers. This is their way of waterproofing their bodies. A layer of stored fat under their skin also keeps them warm. It gives them extra energy when needed too. In warmer climates penguins may have bare skin on their faces to stay cooler.
Penguins could live all year in the sea but they must come ashore to mate and raise their babies. Most nests are made by the male. Both parents help raise the babies. In warm climates penguins must protect the eggs from the heat. Nests can be placed in crevices and caves along the shore. Penguins in colder climates build nests on top of soil or rocks out of pebbles. They are above ground to avoid being flooded by melting ice.
In spring more than a million king penguins raise their young on South Georgia Island in the southern part of the Atlantic Ocean. The male and female take turns holding a single egg on top of their feet. They keep it warm by holding it up to a special warm area of their belly skin called the brood patch. The other parent goes off to hunt for food.
In summary, all seventeen types of penguins in the world are alike in some ways. They are all flightless birds. They have dark backs and white fronts and live near the sea in the

©Halikulov Multilevel

Southern Hemisphere.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. Which of the following are the two largest types of penguins?
A) King and emperor
B) Brush-tailed and emperor
C) Galapagos and king
D) None of the above

22. Which of the following reasons tells why penguins use the oil from the gland at the base of their tail?
A) To protect their eyes from bright light
B) To waterproof their feathers
C) To keep their feet tough
D) To keep their beaks sharp

23. What is unusual about how the male and female emperor penguins on South Georgia Island take care of their egg?
A) They bury it in the sand.
B) The female sits on it for three weeks.
C) The male and female use a brood patch to keep the egg warm.
D) The parents leave the egg alone while they go off to hunt for food.

24. Penguins live …
A) anywhere.
B) Only in the forests of Galapagos.
C) at the equator.
D) in the frigid climate of Antarctica.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. All penguins have black bands across their chests.
A) True **B)** False **C)** No Information
26. Penguins have sharp teeth.
A) True **B)** False **C)** No Information
27. Penguins eat small animals like fish and squid.
A) True **B)** False **C)** No Information
28. Penguins choose their partner for life.
A) True **B)** False **C)** No Information
29. King penguins and emperor penguins dislike each other.
A) True **B)** False **C)** No Information

@Halikulov_Multilevel

TEST 2

Read the following text for question 21-29.

PIRATES

There have always been people who robbed ships in the open sea. We know them as pirates or corsairs. Many of them were sailors who lost their jobs, others were just young men and women looking for adventure. Thousands of pirates were active from 1650–1720. These years are sometimes known as the 'Golden Age' of piracy. Probably the most famous pirates of this period are Blackbeard, Henry Morgan, William 'Captain' Kidd, and the Barbarossa brothers.

The “Jolly Roger” is the well-known pirate flag. There are a number of theories about its origin. It is thought that the first pirates used a red flag, which was common in sea attacks. A red flag told other ships that there would be no pity and no prisoners would be taken. This red flag was called Joli Rouge (pretty red) in French. Most probably, English people pronounced it in their own way “Jolly Roger”. Another theory says that “old Roger” was another name for the devil.

Another popular image from the pirate world is a parrot, sitting on the captain's shoulder. Well, there's no historical proof of that. No doubt, pirates often travelled to faraway exotic lands and brought unusual animals as souvenirs with them. Parrots were particularly popular because they were colourful, could be taught to speak, and were easier to care for than, say, monkeys. However, you can't imagine a pirate fighting with a bird on the shoulder. This image possibly began with the book “Treasure Island”. In the book, the ever famous Long John Silver carried a parrot as a pet.

Before joining a ship each pirate signed an agreement called “Articles”. This explained the rights and laws on board the ship, how much a person was paid, what to do in case of emergency, etc. For example, playing cards for money was not allowed. For breaking the rules a pirate would be shot or left on a desert island with a bottle of water and a gun.

A pirate ship was organized democratically. After a successful attack they divided the treasures equally, only the captain and the cook got more. They sometimes decided together which ship to attack or where to sail next. Most pirates were paid four times more than they had when they were sailors. But on land they were criminals and lots of money was offered to those who caught them.

However, for some time the English government supported pirates. There were lots of pirates in the sixteenth century when England was at war with Spain and the Dutch Republic. Queen Elizabeth I ordered them to rob Spanish ships and bring gold, silver and jewels to the country. Sir Francis Drake was one of the most famous pirates. He brought lots of treasures to England and also was the first Englishman to sail all the way around the world. Because of this, he was made a knight by Queen Elizabeth I.

@HALIKULOV_Multilevel

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. “Golden age” of piracy lasted …

A) for a century
B) for 70 years
C) until XIX century
D) until James Kidd died

22. A red flag symbolizes …
A) French pirate ships
B) the first pirates that used them
C) no kindness, no prisoners
D) Jolly Roger - the devil

23. Parrots, according to the author …
A) sat on captain's shoulder
B) were nothing more than souvenirs to them
C) were taught to train monkeys
D) has possibly become fashionable after the book - "Treasure Island"

24. The pirates who decide whom to attack next were …
A) criminals
B) boardsmen and captains
C) captains and cooks
D) sailors

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. The flag "Jolly Roger" meant death for ships' sailors and passengers.
A) True **B)** False **C)** No information
26. The name for the flag "Jolly Roger" is of English origin.
A) True **B)** False **C)** No information
27. Parrots brought luck to pirates at sea.
A) True **B)** False **C)** No information
28. In the past pirates did some jobs for the English queens and kings.
A) True **B)** False **C)** No information
29. Francis Drake was the richest English pirate.
A) True **B)** False **C)** No information

TEST 3

Read the following text for question 21-29.

TWO SPORTS BRANDS

The small town in Bavaria is very famous in Germany, because there is the home of the Dassler brothers. They started two well-known sports brands: Adidas and Puma. But their story is not about peace, it's about war, disagreement and competition.
In 1924 Adolf and Rudolf started making shoes and soon had a small shoe business. The elder brother, Rudolf (or Rudi), was a veteran of World War I. He was a good businessman and knew how to sell things. The younger brother, Adolf (or Adi) was more thoughtful and creative. The brothers had 25 workers at the factory and they made 100 pairs of sports shoes every day.
During the 1936 Olympics, Adi Dassler drove to the Olympic village with a suitcase full of

@Halikulov_Multilevel

sports shoes. He asked an American sprinter Jesse Owens to wear and run in them. Owens won 4 gold medals and at once the Dassler shoes became popular. The Dasslers were selling 200,000 pairs of shoes each year before World War II.
We don't know much about their lives at the time of World War II. However, in the 1940s they refused to work together any more. Rudolf left the company, moved to the other bank of the river and started a competing shop there. At first he wanted to name his company Ruda, but then he thought about a graceful, quick animal – the puma. And so Puma was born.
Adi stayed with family business and renamed the company Adidas. He developed the 3-stripe logo in 1941 and registered it as Adidas' brand. Adi wanted to make a symbol that could be easily recognized by other people and three stripes was a good idea. The stripes show a mountain. You have to climb it if you want to reach the peak or achieve anything.
The serious conflict between the brothers divided the town into two: the Adidas bank and the Puma bank of the river. It was like a silent war. Only the bravest people could wear their Puma shoes and cross the river to the Adidas side of the town. When people met in the street, they first looked down at each other's shoes. It helped them to decide if that person was an enemy or a friend. What's more, Puma people didn't marry Adidas people. There were Adidas and Puma schools, pubs, shops, restaurants and hotels.
The brothers never became friendly again or even spoke to each other. Rudi died in 1974 and left Puma to his son. The family sold the company in 1989. Adi died in 1978, his son was the head of Adidas till his death in 1987. Today Puma is controlled by a big French company and Adidas is owned by a number of companies.
The "war" was declared completely over in 2009. Employees and workers of both companies shook hands and then played a football match in the Bavarian town of Herzogenaurach. The match was the first joint event for the two companies since 1948. The match ended 7–5 but the teams were not divided into Adidas and Puma. Each team was a mix of Adidas and Puma players.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. What was Rudolf good at?
A) fighting wars
B) businnes
C) shoemaking
D) brandmaking

22. The Dasslers…
A) were very popular when they started shoemaking
B) fought both World wars
C) asked an athlete to wear their sport shoes
D) made 100 shoes every day before 1936

23. According to the text, the puma is …
A) a fast creature
B) an international brand name made up by Rudolf
C) symbolized a mountain
D) was the first name came to Rudolf when he started his own business

@Halikulov_Multilevel

24. "War" between the brothers …
A) devastated their hometown and brought destruction
B) were finally over by the time they died
C) lasted until the end of 2000s
D) declared over when Adidas team won Puma team (7-5)

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

25. One of the brothers advertised the first sports shoes with the help of a famous athlete.
A) True **B)** False **C)** No information
26. A trip to the mountain gave Adi the idea for Adidas logo.
A) True **B)** False **C)** No information
27. The people of the town were involved in the brothers' quarrel.
A) True **B)** False **C)** No information
28. Now Adidas and Puma belong to the Dassler family.
A) True **B)** False **C)** No information
29. The results of the football match caused a new outbreak of the war between the Adidas and Puma companies.
A) True **B)** False **C)** No information

TEST 4

Read the following text for question 21-29.

CUTTY SARK

Greenwich, a green district of South East London, is famous for two things: for giving its name to the Greenwich Meridian and Greenwich Mean Time and for its maritime history. The National Maritime Museum, telling the history of British ships, is situated there. The famous "tea clipper", a sailing ship from the 1800s named the Cutty Sark, is kept in Greenwich in a dry dock by the river. The ship is open to the public.
The Cutty Sark was built in 1869 in Scotland, for John Willis, a successful London tea merchant. At that time, she was one of the fastest clipper ships ever built. The ship was named after Cutty Sark, the nickname of the witch Nannie Dee in Robert Burns' poem "Tam o' Shanter".
The Cutty Sark was active for only 7 years and made just 8 round-trip voyages to China. Why such a short career as a tea clipper? Unfortunately for John Willis, in 1869 the Suez Canal was opened and steam ships started widely using it. Steam ships could pass through the canal, whereas clipper ships like Cutty Sark could not. That meant that steam ships could cut thousands of miles off the route and reached China much faster. So most tea merchants preferred steam ships to sailing ships.
While the Cutty Sark's career in the tea trade wasn't very successful, her next career in the Australian wool trade was outstanding. From 1883-95 the ship made the Australian run, bringing wool exports back to London. The Cutty Sark dominated the wool trade for more than 10 years, earning a reputation for high speed on the two-month voyage.
But again, the steam ships spoiled the Cutty Sark's career, making the Australian wool

@Halikulov_Multilevel

trade their own. The Cutty Sark was sold to a Portuguese company. She was renamed Ferreira and from 1895 to 1922 she carried cargo between Portugal and the distant corners of the Portuguese Empire.
In 1922 Ferreira was put into Falmouth to repair damage which she had received in a windstorm. A retired sea captain, Wilfred Dowman, saw the ship and decided to buy her. He restored the Cutty Sark to how she had been during her days as a tea clipper. Then the ship was used for naval training until 1951, when she was sent to London for the Festival of Britain. There, the National Maritime Museum put the ship into dry dock at Greenwich in 1954, beside the Old Royal Naval College. A new step in the Cutty Sark's career began — she was turned into a museum.
Unfortunately, the ship was badly damaged in a fire on 21st May 2007. The following long and expensive restoration lasted until 2012. Nowadays the Cutty Sark is the only remaining original clipper ship from the 1800s. She is a popular London attraction. Visitors are welcome to explore the decks and walk in the footsteps of seamen who sailed the ship between England and China in the 1800s. There are also numerous hands-on exhibits and interactive displays for both children and adults.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. Cutty Sark …
A) is situated in London
B) never sailed
C) was the first “tea clipper”
D) was the nickname of Robert Burns

22. The ship stopped sailing …
A) after the Suez Canal opened
B) after she was returned to London for a festival
C) in 1895
D) in 2007

23. The ship turned into a museum …
A) for centuries
B) after it was badly damaged in a fire in 2007
C) when it participated in the Festival of Britain
D) after she returned to London in 20th century.

24. Nowadays, visitors can …
A) see Chinese teas clippers
B) explore Cutty Sark and walk in the footsteps of sailors
C) sail between England and China aboard the ship
D) become seamen themselves and try to understand how to be better

@Halikulov_Multilevel

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. The Cutty Sark was named after her owner's wife.
A) True **B)** False **C)** No Information
26. The Cutty Sark's journey time to China was shorter than for steam ships.
A) True **B)** False **C)** No Information
27. The Cutty Sark was the only clipper ship which carried wool from Australia to Great Britain.
A) True **B)** False **C)** No Information
28. The Cutty Sark was used as a trade ship until the beginning of the 21st century.
A) True **B)** False **C)** No Information
29. The Cutty Sark museum is open every day except Christmas.
A) True **B)** False **C)** No Information

TEST 5

Read the following text for question 21-29.

HALLOWEEN

Halloween dates back to an ancient Celtic festival. The Celts, who lived 2,000 years ago in the area of Ireland, the United Kingdom and northern France, celebrated their new year on 1st November. This day showed that the summer was over and winter had come. Because of the cold and darkness, winter was associated with human death.
Celts believed that on Halloween night the ghosts of the dead returned to earth. With their help, the Druids or Celtic priests, could predict the future. It was important because people depended on the natural world which was dangerous and changeable. They wanted to know what their life would be like in the next year.
For this event the Druids built big bonfires, where the people gathered to burn crops and animals. It was a gift to the Celtic gods. During the celebration, the Celts wore costumes made of animal heads and skins. They sang, danced and listened to the stories the Druids told them. When the celebration was over, they went home and brought burning pieces of wood with them. They lit their fires and hoped it would ensure good fortune and protect the family during the winter.
The first celebrations of Halloween in America were public events. Neighbours got together to celebrate the harvest and tell each other stories of the dead. They also sang and danced. By the middle of the nineteenth century, these autumn festivals were common, but Halloween was not yet celebrated everywhere in the country.
In the second half of the nineteenth century, lots of immigrants started coming to America. They helped to make the celebration of Halloween a popular national event. Americans began to dress up in frightening costumes and go from house to house asking for food or money. The most popular characters were witches, ghosts, and vampires. Everyone tried to look as ugly and scary as possible.
Halloween is closely associated with the Jack-o'-lantern, a pumpkin with a candle inside that shines through the holes to make a horrible face. Most people think that the Jack-o'-lantern is an American tradition. However, the original Jack-o'-lantern was not a pumpkin

© Halikulov Multilevel

but a man who, according to the old Irish legend, played a trick on the devil himself. He was punished for that and was accepted neither to heaven nor to hell. The Irish people shared the legend with the Americans and showed them how to make Jack-o'-lantern out of the pumpkin.
By the 1930s, Halloween had been celebrated with parades, town-wide parties and lots of other entertainment. Later a new tendency appeared. By the 1950s, Halloween had changed into a holiday directed mainly at children. On that evening children in costumes travel from house to house in order to ask for treats (such as some sweets, a small present or a few coins) with the question "Trick or treat?" The trick is a threat (usually not working) to perform mischief on the owner of the house if no treat is given. "Trick or treat?" has become a traditional practice on Halloween in many countries.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. Halloween were celebrated 2000 years ago because …
A) the Celts presumed that summer would be over soon.
B) of no particular reason as it was very ancient back then.
C) in the UK, France and Ireland, it meant that autumn is over.
D) it was their new year.

22. On Halloween night it is believed that …
A) the ghosts of the future visited the Celts and haunted them
B) the spirits of the dead helped the Druids
C) the gods gave them a piece of wood
D) wore costumes of animals and plants

23. It is stated in the passage that the first celebrations of the Halloween in America were…
A) celebrated everywhere by the neighbors.
B) nothing more than entertainment festivals in which they didn't tell stories like the Celts.
C) celebrated with big fires, dances, stories and burning crops.
D) common but wasn't celebrated widely

24. Adults started to ignore the Halloween festival …
A) in 1930s
B) in the XIX century
C) by the 1950s
D) by the middle of the XIX century

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. For the Celts Halloween was associated with the change of the seasons.
A) True **B)** False **C)** No Information
26. The Celts paid the priests for their predictions.
A) True **B)** False **C)** No Information

@Halikulov_Multilevel

27. In ancient times fires were prohibited on Halloween night.
A) True **B)** False **C)** No Information
28. The Irish immigrants taught Americans how to use pumpkins for Halloween ceremonies.
A) True **B)** False **C)** No Information
29. From the middle of the 20th century, children have taken an active part in Halloween celebrations.
A) True **B)** False **C)** No Information

TEST 6

Read the following text for question 21-29.

Since the theory of UG was proposed, linguists have identified many universal language rules. However, there are almost always exceptions. It was once believed, for example, that if a language had syllables that begin with a vowel and end with a consonant (VC), it would also have syllables that begin with a consonant and end with a vowel (CV). This universal lasted until 1999, when linguists showed that Arrernte, spoken by Indigenous Australians from the area around Alice Springs in the Northern Territory, has VC syllables but no CV syllables.
Other non-universal universals describe the basic rules of putting words together. Take the rule that every language contains four basic word classes: nouns, verbs, adjectives and adverbs. Work in the past two decades has shown that several languages lack an open adverb class, which means that new adverbs cannot be readily formed, unlike in English where you can turn any adjective into an adverb, for example ‘soft’ into ‘softly’. Others, such as Lao, spoken in Laos, have no adjectives at all. More controversially, some linguists argue that a few languages, such as Straits Salish, spoken by indigenous people from north-western regions of North America, do not even have distinct nouns or verbs. Instead, they have a single class of words to include events, objects and qualities.
Even apparently indisputable universals have been found lacking. This includes recursion, or the ability to infinitely place one grammatical unit inside a similar unit, such as ‘Jack thinks that Mary thinks that ... the bus will be on time’. It is widely considered to be the most essential characteristic of human language, one that sets it apart from the communications of all other animals. Yet Dan Everett at Illinois State University recently published controversial work showing that Amazonian Piraha does not have this quality.
But what if the very diversity of languages is the key to understanding human communication? Linguists Nicholas Evans of the Australian National University in Canberra, and Stephen Levinson of the Max Planck Institute for Psycholinguistics in Nijmegen, the Netherlands, believe that languages do not share a common set of rules. Instead, they say, their sheer variety is a defining feature of human communication - something not seen in other animals. While there is no doubt that human thinking influences the form that language takes, if Evans and Levinson are correct, language in turn shapes our brains. This suggests that humans are more diverse than we thought, with our brains having differences depending on the language environment in which we grew up. And that leads to a disturbing conclusion: every time a language becomes extinct, humanity loses an important piece of diversity.
If languages do not obey a single set of shared rules, then how are they created? ‘Instead of universals. you get standard engineering solutions that languages adopt again and

@Halikulov_Multilevel

again, and then you get outliers.' says Evans. He and Levinson argue that this is because any given language is a complex system shaped by many factors, including culture, genetics and history. There- are no absolutely universal traits of language, they say, only tendencies. And it is a mix of strong and weak tendencies that characterises the 'bio-cultural' mix that we call language.

According to the two linguists, the strong tendencies explain why many languages display common patterns. A variety of factors tend to push language in a similar direction, such as the structure of the brain, the biology of speech, and the efficiencies of communication. Widely shared linguistic elements may also be ones that build on a particularly human kind of reasoning. For example, the fact that before we learn to speak we perceive the world as a place full of things causing actions (agents) and things having actions done to them (patients) explains why most languages deploy these grammatical categories.

Weak tendencies, in contrast, are explained by the idiosyncrasies of different languages. Evans and Levinson argue that many aspects of the particular natural history of a population may affect its language. For instance, Andy Butcher at Flinders University in Adelaide, South Australia, has observed that indigenous Australian children have by far the highest incidence of chronic middle-ear infection of any population on the planet, and that most indigenous Australian languages lack many sounds that are common in other languages, but which are hard to hear with a middle-ear infection. Whether this condition has shaped the sound systems of these languages is unknown, says Evans, but it is important to consider the idea.

Levinson and Evans are not the first to question the theory of universal grammar, but no one has summarised these ideas quite as persuasively, and given them as much reach. As a result, their arguments have generated widespread enthusiasm, particularly among those linguists who are tired of trying to squeeze their findings into the straitjacket of 'absolute universals'. To some, it is the final nail in UG's coffin.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. Which of the following views about language are held by Evans and Levinson?

A) Each of the world's languages develops independently.
B) The differences between languages outweigh the similarities.
C) Only a few language features are universal.
D) Each language is influenced by the characteristics of other languages.

22. According to Evans and Levinson, apparent similarities between languages could be due to

A) close social contact.
B) faulty analysis.
C) shared modes of perception.
D) narrow descriptive systems.

23. In the seventh paragraph, what does the reference to a middle-ear infection serve as?

A) A justification for something.
B) A contrast with something.

@Halikulov_Multilevel

C) The possible cause of something.
D) The likely result of something.

24. What does the writer suggest about Evans' and Levinson's theory of language development?
A) It had not been previously considered.
B) It is presented in a convincing way.
C) It has been largely rejected by other linguists.
D) It is not supported by the evidence.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. The majority of UG rules proposed by linguists do apply to all human languages.
A) True B) False C) No Information
26. There is disagreement amongst linguists about an aspect of Straits Salish grammar.
A) True B) False C) No Information
27. The search for new universal language rules has largely ended.
A) True B) False C) No Information
28. If Evans and Levinson are right, people develop in the same way no matter what language they speak.
A) True B) False C) No Information
29. The loss of any single language might have implications for the human race.
A) True B) False C) No Information

TEST 7

Read the following text for question 21-29.

THE POWER OF NOTHING

Geoff Watts, New Scientist (May 26th, 2001)
Placebos are treatments that have no direct effect on the body, yet still, work because the patient has faith in their power to heal. Most often the term refers to a dummy pill, but it applies just as much to any device or procedure, from a sticking plaster to a crystal to an operation. The existence of the placebo effect implies that even quackery may confer real benefits, which is why any mention of placebo is a touchy subject for many practitioners of complementary and alternative medicine, who are likely to regard it as tantamount to a charge of charlatanism. In fact, the placebo effect is a powerful part of all medical care, orthodox or otherwise, though its role is often neglected or misunderstood.
One of the great strengths of CAM may be its practitioners' skill in deploying the placebo effect to accomplish real healing. "Complementary practitioners are miles better at producing non-specific effects and good therapeutic relationships," says Edzard Ernst, professor of CAM at Exeter University. The question is whether CAM could be integrated

©Halikulov_Multilevel

into conventional medicines, as some would like, without losing much of this power.
At one level, it should come as no surprise that our state of mind can influence our physiology: anger opens the superficial blood vessels of the face; sadness pumps the tear glands. But exactly how placebos work their medical magic is still largely unknown. Most of the scant research done so far has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, morphine-like neurochemicals known to help control pain. But exactly how placebos work their medical magic is still largely unknown. Most of the scant research to date has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, natural counterparts of morphine that are known to help control pain. "Any of the neurochemicals involved in transmitting pain impulses or modulating them might also be involved in generating the placebo response," says Don Price, an oral surgeon at the University of Florida who studies the placebo effect in dental pain. "But endorphins are still out in front." That case has been strengthened by the recent work of Fabrizio Benedetti of the University of Turin, who showed that the placebo effect can be abolished by a drug, naloxone, which blocks the effects of endorphins. Benedetti induced pain in human volunteers by inflating a blood-pressure cuff on the forearm. He did this several times a day for several days, using morphine each time to control the pain. On the final day, without saying anything, he replaced the morphine with a saline solution. This still relieved the subjects' pain: a placebo effect. But when he added naloxone to the saline the pain relief disappeared. Here was direct proof that placebo analgesia is mediated, at least in part, by these natural opiates.
Still, no one knows how belief triggers endorphin release, or why most people can't achieve placebo pain relief simply by willing it. Though scientists don't know exactly how placebos work, they have accumulated a fair bit of knowledge about how to trigger the effect. A London rheumatologist found, for example, that red dummy capsules made more effective painkillers than blue, green or yellow ones. Research on American students revealed that blue pills make better sedatives than pink, a colour more suitable for stimulants. Even branding can make a difference: if Aspro or Tylenol is what you like to take for a headache, their chemically identical generic equivalents may be less effective. It matters, too, how the treatment is delivered. Decades ago, when the major tranquilliser chlorpromazine was being introduced, a doctor in Kansas categorised his colleagues according to whether they were keen on it, openly skeptical of its benefits, or took a "let's try and see" attitude. His conclusion: the more enthusiastic the doctor, the better the drug performed. And this year Ernst surveyed published studies that compared doctors' bedside manners. The studies turned up one consistent finding: "Physicians who adopt a warm, friendly and reassuring manner," he reported, "are more effective than those whose consultations are formal and do not offer reassurance."

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. Placebos work because ...
A) it has an effect on the body
B) it grows patient's faith
C) it enhaces the power to heal
D) people believe on their effect

@HalikulovMultilevel

22. According to the passage, what have most studies on placebos focused on?
A) The role of endorphins in pain control
B) The effectiveness of placebos in treating various diseases
C) The psychological mechanisms behind the placebo effect
D) The potential integration of placebos into conventional medicine

23. The placebo effect, despite it's neglected status ...
A) doesn't work
B) is very scientific in nature
C) is a big part of medical care
D) has too much power

24. Endorphins ...
A) can help to overcome pain
B) makes blood vessels superficial
C) is a chamical hazard
D) is very distinct from morphine

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. The placebo effect only works for controlling pain.
A) True **B)** False **C)** No information
26. Endorphins are believed to play a role in the placebo effect.
A) True **B)** False **C)** No information
27. Naloxone, a drug that blocks endorphins, can eliminate the placebo effect for pain relief.
A) True **B)** False **C)** No information
28. Scientists fully understand how placebos trigger the release of endorphins.
A) True **B)** False **C)** No information
29. The color, branding, and delivery of placebo treatments can influence their effectiveness.
A) True **B)** False **C)** No information

TEST 8

Read the following text for question 21-29.

THE ROLE OF THE SWISS POSTBUS

The Swiss PostBus Limited is the largest of the country's 78 coach companies. Administered by the Motor Services Department of the Post Office, it carries over 120 million passengers each year and is carefully integrated with other public transport services: trains, boats and mountain cableways. The Swiss transportation system resembles a tree, with the larger branches representing federal and private railways, the

@Halikulov_Multilevel

smaller branches being the coaches, and the twigs being the urban transit operators running trams, city buses, boats, chairlifts and so on. But the trunk that holds the tree together is the vast postbus network, without which the whole network would not function.

There isn't an inhabited place in Switzerland that cannot be reached by some sort of public transport. Federal law and the Swiss Constitution stipulate that every village with a population greater than 40 is entitled to regular bus services. The frequency of these services is directly related to population density. Timetables are put together four years in advance, and seldom change. If a new route is to be introduced, the population of the area affected is invited to vote in a referendum.

At times, postbuses are the main — sometimes the only — links between settlements. These coaches, often with a trailer in tow to increase their capacity, are a common sight in high-altitude regions, and their signature sound — part of Rossini's William Tell Overturn, played by the drivers on three-tone post horns with electrical compressors at every road turn — is one of the most familiar Swiss sounds.

The three-tone horns can still be used to 'talk' to post offices (and each other) from a distance. By altering the combination of the tones, a driver can announce 'departure of post1, 'arrival of post', 'arrival of special post', and so on – so much more romantic and often more reliable than radio or mobile phones. This musical 'language' started in the mid-nineteenth century, when the coach drivers could also blow their horns a certain number of times on approaching the station to indicate the number of horses needing to be fed, giving the stationmaster time to prepare the fodder.

The postbus history goes back to 1849, when the Swiss postal service was made a monopoly. The role of today's modern yellow buses was, back then, played by horse-drawn carriages (or in winter by sleighs, in order to travel on snow), which were the same colour. By 1914, eight years after the first motor coaches were introduced, there were still 2,500 horses, 2,231 coaches (or carriages) and 1,059 sleighs in service.

After the First World War, Swiss Post bought a fleet of decommissioned military trucks which were converted into postbuses, but it was not until 1961 that the last horse-drawn coach was replaced with a motorised version.

Today, the Swiss Post Office boasts one of the world's most advanced coach fleets, including fuel-cell models and the world's first driverless bus. This was launched in 2015 in the town of Sion, the capital of the canton of Valais, one of the 26 cantons, or administrative regions, that make up the country.

Postbuses often go to places that other means of transport cannot reach. Most of the drivers therefore see themselves as educators and tour guides. Although it's not in their job description, they're likely to point out the sights — waterfalls, gorges, and so on — and are always ready to pull over for a photo opportunity.

Switzerland's longest postbus journey, and one of the highest, crosses four mountain passes – an eight-hour trip undertaken by a single postbus. The route goes through several cantons; two languages (German and Italian); all four seasons – from burning sunshine to showers and heavy snowfalls; and countless places of interest, One of the passes, the Gotthard, is often described as 'the People's Road', probably because it connects the German-speaking canton of Uri with Italian-speaking Ticino. Like Switzerland itself, postbuses 'speak' all four state languages: German, French, Italian and Romansh – and by law, their automated intercom announcements are given in the language of whichever canton the bus is currently passing through.

Irrespective of their previous driving experience, drivers undergo lots of training. During the first year, they have, to drive postbuses under the supervision of a more experienced

@HALIKULOV_Multilevel

driver. Only after two years of safe driving in the valleys can they be pronounced ready for a mountain bus.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21. When comparing the Swiss transportation system to a tree, the writer emphasises
A) the size of the postbus system.
B) how competitive the postbus system is.
C) how important the postbus system is.
D) the threat to the postbus system.

22. According to the fourth paragraph, what were three-tone horns first used to indicate?
A) how many coach horses required food
B) how long the bus would stay at the station
C) how many passengers wanted a meal
D) how soon the bus would arrive at the station

23. What point does the writer make about the postbus drivers?
A) Many choose to give passengers information about the surroundings.
B) Most are proud of driving buses to places without other forms of transport.
C) They are required to inform passengers about the sights seen from the bus.
D) They are not allowed to stop for passengers to take photographs.

24. What is said about the buses' automated announcements?
A) They are given in the language of the bus's starting point.
B) The language they are given in depends on where the bus is at the time.
C) They are always given in all the four languages of Switzerland.
D) The language they are given in depends on the bus's destination.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25. Some postbuses after the First World War were originally army vehicles.
A) True **B)** False **C)** No Information
26. The number of driverless buses has increased steadily since 2015.
A) True **B)** False **C)** No Information
27. On the longest postbus route in Switzerland, passengers have to change buses.
A) True **B)** False **C)** No Information
28. The weather on the longest postbus route is likely to include extreme weather conditions.
A) True **B)** False **C)** No Information
29. There is a widely used nickname for part of the longest route used by postbuses.
A) True **B)** False **C)** No Information
